

18-03-25

We at Rowville Engineering Pty Ltd have been massively hit by imported steel, specially imported fabricated steel. Our profits have plunged and we can hardly make wages.

We used to smash fair bit of steel especially when approaching Christmas, but 2025 Christmas was pretty dead for us and is still the same.

We have already revised our pricing structure and reduced our profit margins significantly; we are still unable to win most jobs as there is always someone who comes in half price and we eventually pass the project instead of making loss.

This is also painful for us when we take pride in carrying Australian made logo with us supporting local industry and contributing to Australian economy but someone from outside comes in, takes away the cake and we are left starving.

We urge Productivity commission through Australian Steel Institute to take appropriate actions promptly before its too late, a lot of local businesses are at brink of collapse and we may never see them again if you don't action now.

Best Regards,

Muhammad Kabir
