

## Proposal

Healthcare systems worldwide are under increasing strain, facing rising demand, workforce shortages, and growing complexity in care delivery. To meet these challenges, it is essential we harness technology that empowers clinicians, streamlines workflows, and drives meaningful efficiencies.

At Eolas Medical, we are already delivering this impact—supporting over 300,000 healthcare professionals across multiple systems globally and helping clinicians access the knowledge they need at the point of care. We are proving how technology can reduce inefficiencies, alleviate pressure on clinicians, and ultimately strengthen healthcare systems for the future.

**We'd love the opportunity to work with the Australian Government to demonstrate our solution is actionable, scalable and drives efficiency for clinicians and healthcare workflows within the Australian Healthcare System.**

## Overview

[Eolas Medical](#) is an AI knowledge management platform, used at the point of care, to help clinicians access the information they need to make clinical decisions. It is currently being used by over **500 healthcare teams** and has over **300,000 healthcare professionals** registered on the platform in the UK, Ireland and the US. Within the UK, we're active in over 85% of NHS trusts.

## Our Mission

At Eolas Medical, our mission is to empower every clinician in the world with immediate access to the medical knowledge they need, at the point of care. By organising and streamlining the world's medical knowledge, we aim to make healthcare simpler, safer, and smarter. This vision underpins everything we do and ensures that our platform not only supports clinicians in their daily practice but also drives lasting efficiencies across entire healthcare systems.

## Background

Eolas Medical was designed and developed by physicians to streamline access to the information you need in seconds. The platform is available on mobile, tablet or desktop allowing easy access in any clinical setting.

We work with clinical institutions as their knowledge management system, allowing streamlining of local hospital content such as guidelines, pathways, education and much more.

We reduce the time searching for information for HCPs **allowing greater efficiency** and **improve compliance to clinical guideline utilisation**, ensuring consistent and safe care. We've proven we're up to 9x faster finding information at the point of care.

### **Ask Eolas**

Our latest feature is a unique computer vision RAG based search engine that visually grounds the responses to ensure a trusted response, where the clinician can see and easily access the reference source. This further increases efficiency of finding the clinical answers but remains trusted in the responses shared.

### **Summary**

Eolas Medical is transforming healthcare by putting trusted, actionable information in the hands of clinicians exactly when and where they need it. Our rapid growth, widespread adoption across the NHS, and global reach demonstrate that our solution is both scalable and effective in driving productivity across healthcare systems. By reducing inefficiencies and supporting clinicians at the point of care, we are helping to make healthcare simpler, safer, and smarter. We would be delighted to partner with the Australian Government to extend these benefits within the Australian Healthcare System and showcase how technology can play a vital role in supporting clinicians and strengthening health services for the future.
