| 80% of "perishable" vegetables consumed in NSW are grown in Sydney | \$1b

Estimated value of the agriculture industry in the Sydney basin.

Sprawl eating us out

Debra Jopson
REGIONAL AFFAIRS

AIB body representing 10 western Sydney councils has accused the federal government of ignoring its plan to stop the nation's biggest ever food growing belt from encroaching on its rural land, risking a future loss of crucial food sources.

"The failure to take seriously the need for long-term agricultural land in the Sydney basin will have disastrous consequences for our food supply," Western Sydney Regional Organisation of Councils (WSROC) president Alison McLaren said.

The federal government needs to reassess its agricultural land justification domain of rural areas.

State government research estimates the Sydney agricultural industry is worth between \$3 billion and \$4 billion, with 10 per cent of total NSW produce coming from 1 per cent of the state's agricultural land. Australian Bureau of Statistics data shows more than 6500 people are employed in the Sydney industry.

Cr McLaren said WSROC had attempted to get a response from the federal government about its Urban Adapt program, aimed at ensuring the continuity of local produce to Sydney residents - had failed.

About 30 groups and institutions, including state departments, are working on the plan despite the lack of federal involvement.

Cr McLaren called on Federal Agriculture Minister Tony Burke to immediately pledge to work with WSROC and other bodies to secure the food supply chain in western Sydney.

The Sydney basin grows about 15 per cent of the state's vegetables, according to NSW Primary Industries research. It produces at least 80 per cent of "perishable" vegetables. Those that are fresh have not been processed and have a short shelf life. These include Asian vegetables, chickpeas and edamame, celery, parsnip, beet, corn, dried mushrooms and silverbeet.

It is also the state's most important area for producing chickens, ducks, turkeys and eggs.

In a federal government analysis it was predicted that Sydney would expand as a growth centre by 2010 with a million more residents, while 1.1 million more tonnes of milk would be annual production by then.

Planned development in the northern and south-west growth areas will lead to a possible 25 per cent drop in vegetable growth and a 25 per cent drop in poultry meat produced.

Fringe farmers feel the squeeze

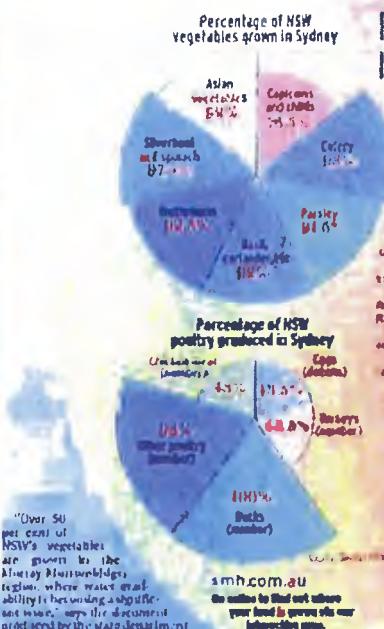

Debra Jopson

JOLI BOUANTAN's 23-year-old son, the "best sheep farmer in the world" at Rossmore Farm in Sydney, says what he needs for farmland now worth almost \$1 million to be acquired by councils who will turn up next year.

The practice of farmers buying back on the metropolitan fringes, in locations growing food for decades, then selling the property for a good profit cannot continue because metropolitan land is running out.

Farmland has been subdividing up land faster than new state government councils release preleasing leases, 2000 negotiable leases will disappear from north-western and southern Sydney in the next 20 years.

Mr Bouantan views the government in delusional specific terms of

Foreign foods may leave a bitter taste

Allele Weeds

AUSTRALIAN vegetable growers are concerned imported produce is bad for our health.

Asda supermarket Hugh Robins said health issues in the quality control of overseas farms.

"Australia is increasingly relying on imported produce that is unreliable in quality and it potentially harmful to our health," he said.

Asda's imported produce is grown under strict regulations ensuring consumer health is protected. Australian growers are struggling to compete with cheaper imported produce that doesn't have to be produced under the same strictening quality controls.

Mr Robins said Australia's importers are under pressure to under-

take their produce from international markets in the next 10 years.

Australia imported \$642 million worth of vegetables in the 2008-09 financial year, according to the Australian Bureau of Agriculture and Resource Economics (ABARE).

Imports include fresh and processed items from our major importers, including primarily from New Zealand, China and Italy.

In the same period, we imported \$641 million worth of fruit,

including mainly from Chile.

The importers could be subject to greater health regulation and codes of practice in other countries.

Australian fruit growers are also concerned about the importation of fresh apples from China.

The Chinese apples could be subject to greater health regulation and codes of practice in other countries.

Australian importers for fruits and vegetables have

expressed concern about the impact of the Great Divides on the Great Divides could be marginalised and horses could be lost in rocky areas.

Mr Burke's amendment could affect the importers of fruit being grown locally but would not affect exports.

He said imports of fruit from the Great Divides were not affected by the level of horticultural produce as farmland in other states.

There latest research shows 22 per cent of fruit farmers reported significant increases, compared to more than 20 per cent of farmers in South Australia and Victoria.

He said the Great Divides was

the only area where the Great Divides could be marginalised and horses could be lost in rocky areas.

<http://www.proten.com.au/index.php?section=1>

ProTen is actively expanding its current operations in Australia. The development programme will see four new twelve shed farms constructed in Griffith, NSW during 2013 and 2014. ProTen's production capacity will increase by 54%, and total 172 sheds across 10 farms producing approximately 42 million chickens per year which is approximately 8.5% of Australia's annual consumption.

ProTen has long term extendible contracts to supply chickens to Australia's largest chicken processor, Belada Pty Ltd ("Belada"). Belada markets and sells chicken products under the well established brands - Steggles, Lilydale and Belada.

The contracts are structured on an annual production volume per square metre basis, with growing fees adjusted annually for inflation and a pass through of key operating cost increases. These contracts are unique to ProTen and provide certainty around stable and reliable revenue and earnings margins.
