

NSW  
Farmers  
Association

**Please describe how native vegetation and biodiversity/threatened species laws have impacted on your:**

*Farming practices (your day to day operations)*

Most common tree & best for fence posts is "slaty red gum" which is a threatened species. Therefore have to find an alternative. Other timber which has been set aside for post timber can no longer be used.

*Productivity (ability to develop existing or new land)*

Can not develop my native forest area (for production and conservation) as there is no certainty of what can be done with the land in the future.

*Sustainability (the ability to improve your land and the environment)*

Those who have conserved areas are now penalised with the restrictions being placed on them.

*Property values and returns*

*Investment patterns (either on- or off-farm)*
