

Productivity and geography

John Daley, CEO, Grattan Institute Productivity Commission Conference, Canberra 12 December 2016

Allowing jobs to concentrated in the centre of big cities may increase productivity

- Services are growing much faster than other sectors
- This services growth is concentrated towards the centre of big cities
- Employer choices and outcomes suggest that there are productivity benefits (and perhaps rents?) from agglomeration

Government can fail to support central city growth; it can't do much to encourage regional growth

- Infrastructure investment has not matched economic growth
- Reforming planning and housing policy may well yield economic benefits

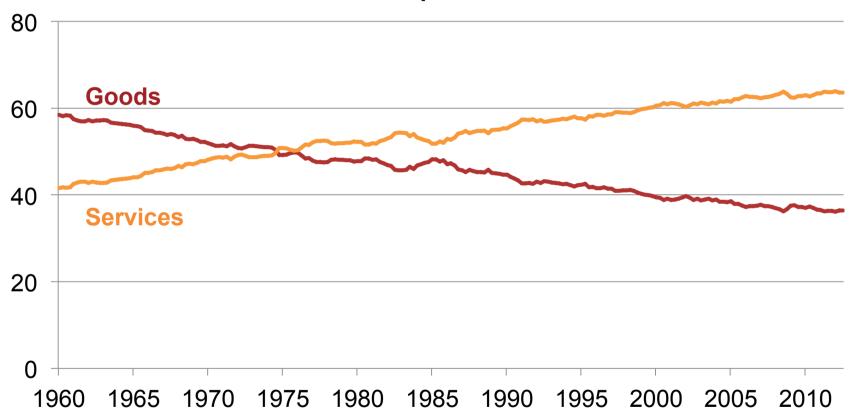

These economic patterns have political costs

- In Australia and around the world, politics is dividing between cosmopolitanism and nationalism – corresponding to cities and regions
- The divisions are both economic and cultural

People are consuming more services

Share of total nominal household expenditure

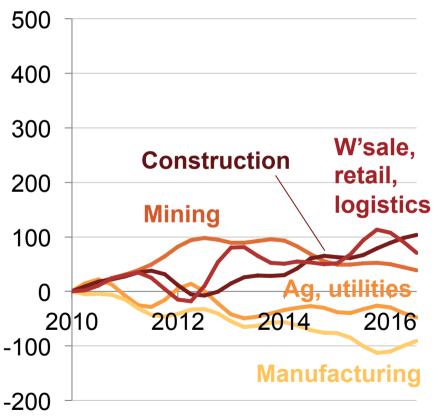

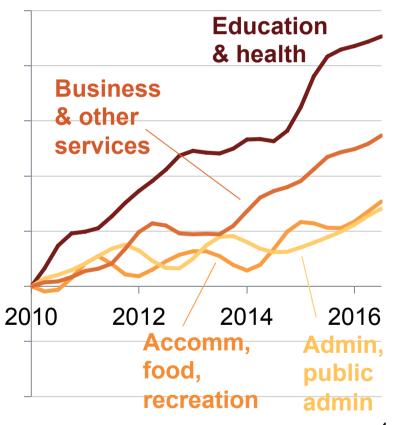

Services growth accelerated in the last 5 years

Cumulative employment growth since 2010

000 people, trend

Australia's economy is now dominated by its big cities

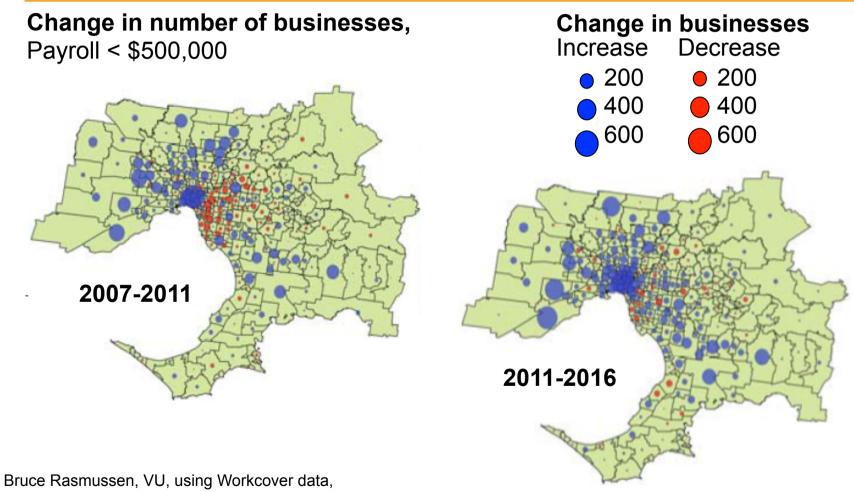

The geography of job growth changed about 2008

Small business is increasingly dispersed

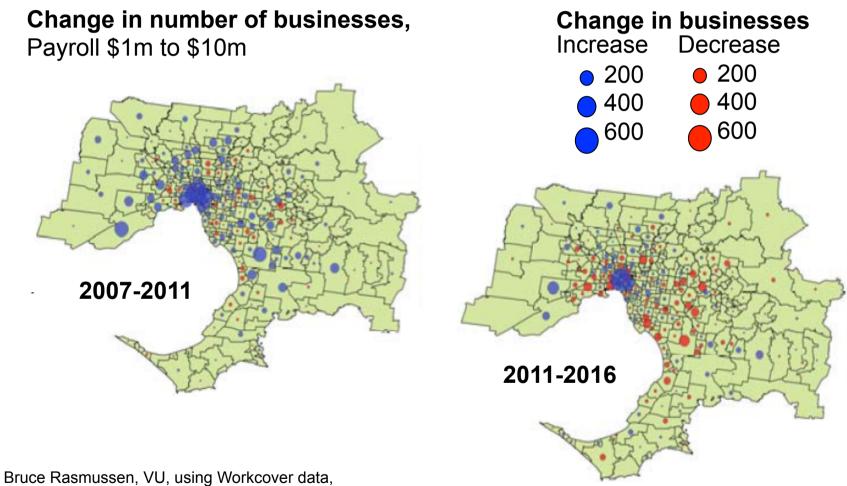

http://www.vises.org.au/documents/2016_%20Rasmussen_MEF_Changing_Business_Location.pdf

Big business is increasingly centralised

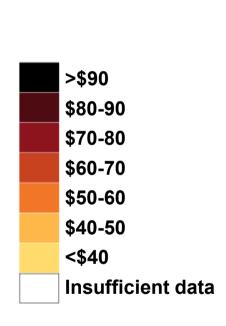

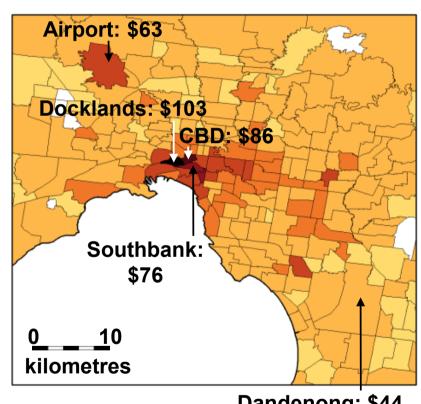

http://www.vises.org.au/documents/2016 %20Rasmussen MEF Changing Business Location.pdf

Economic output per hour is particularly concentrated in Melbourne

Economic activity per working hour, 2011-12, Melbourne

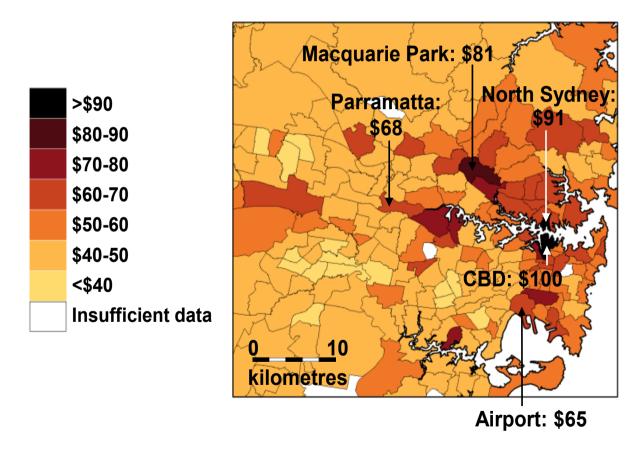

Dandenong: \$44

Sydney is a little less concentrated, with an unusual "northern arc"

Economic activity per working hour, 2011-12

Why are the centres of big cities growing so fast?

In a services economy, physical proximity matters

- Medial papers are more likely to be influential if the authors sit close together
- People in businesses in bigger cities communicate more with people in other companies – in person, over the phone, and over the internet
- Before we do real business with another company, our first instinct is to meet face to face

Communications technology *increases* the importance of being close to others

- The rise of communications technology (telegraph, telephone, fax, internet)
 has consistently increased the value of being physically close to each other
- The first companies to limit remote working and insist on physical proximity between their staff were ... technology companies

Allowing jobs to concentrated in the centre of big cities may increase productivity

- Services are growing much faster than other sectors
- This services growth is concentrated towards the centre of big cities
- Employer choices and outcomes suggest that there are productivity benefits (and perhaps rents?) from agglomeration

Government can fail to support central city growth; it can't do much to encourage regional growth

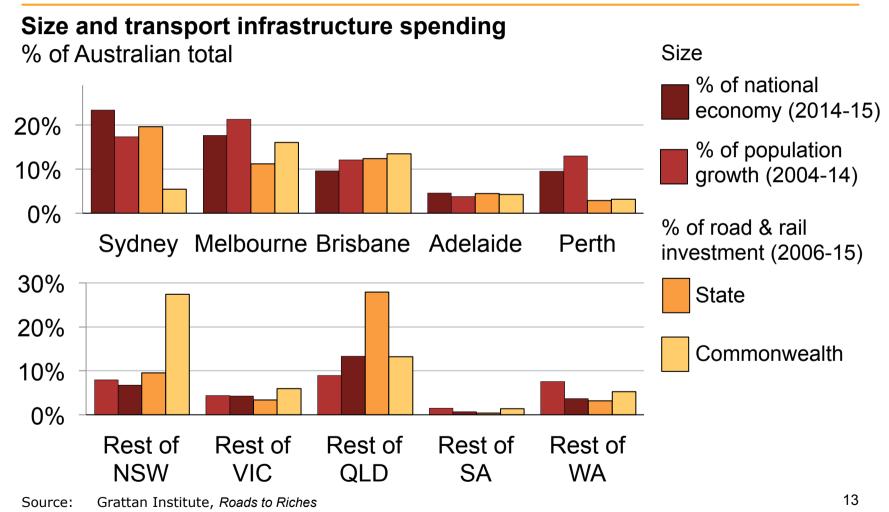

- Infrastructure investment has not matched economic growth
- Reforming planning and housing policy may well yield economic benefits

These economic patterns have political costs

- In Australia and around the world, politics is dividing between cosmopolitanism and nationalism – corresponding to cities and regions
- The divisions are both economic and cultural

Government transport spending has not reflected growth in economy or population

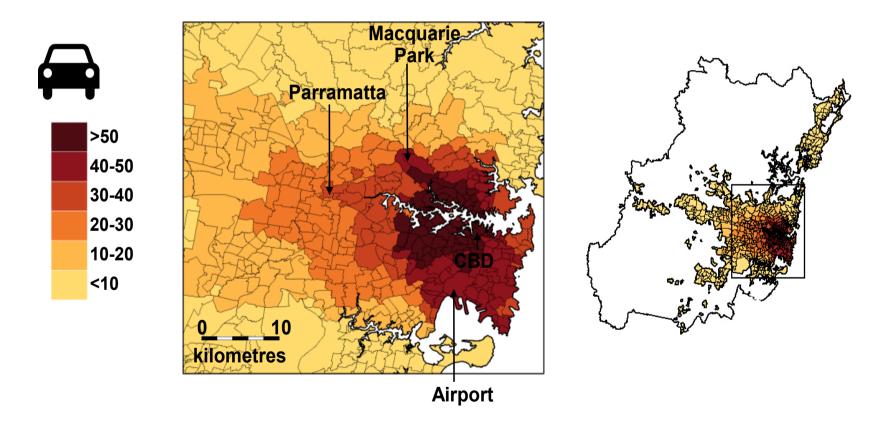

Those living in Sydney's west can't reach many jobs by car

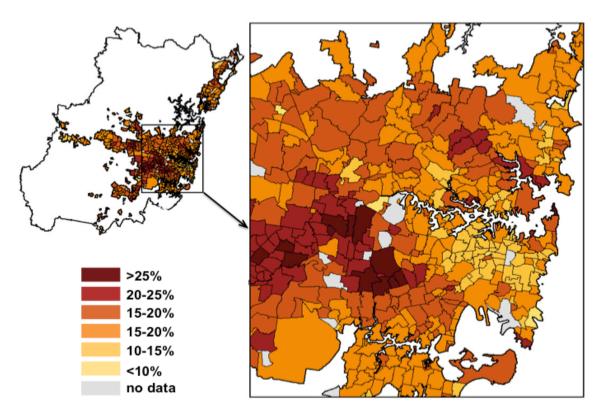

Percentage of Sydney jobs that can be reached in 45 minutes by car

Women in poorly-connected areas face especially difficult compromises

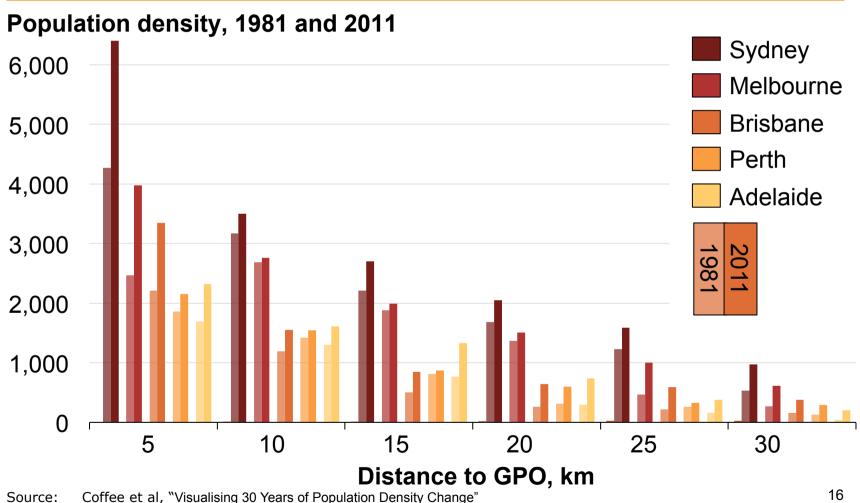

Differences in male and female workforce participation by suburb, Sydney 2011

Population density has increased, but not much in the middle ring

Allowing jobs to concentrated in the centre of big cities may increase productivity

- This services growth is concentrated towards the centre of big cities
- Employer choices and outcomes suggest that there are productivity benefits (and perhaps rents?) from agglomeration

Government can fail to support central city growth; it can't do much to encourage regional growth

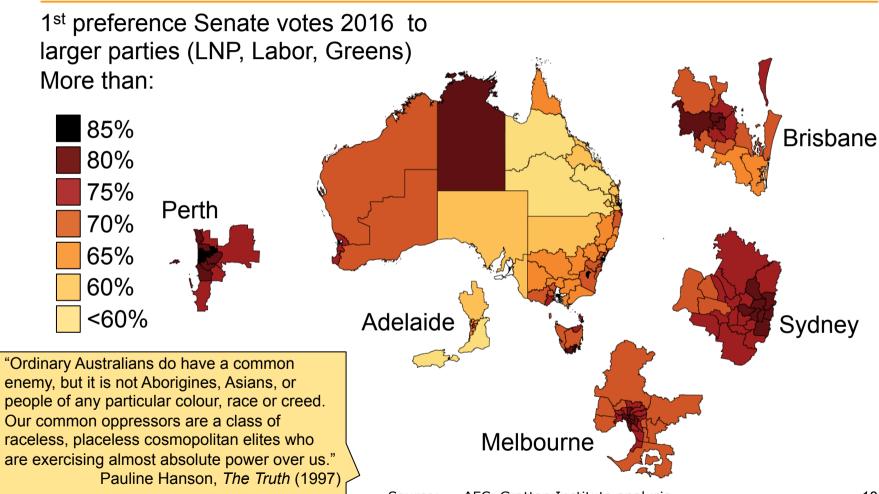

- Infrastructure investment has not matched economic growth
- Reforming planning and housing policy may well yield economic benefits

These economic patterns have political costs

- In Australia and around the world, politics is dividing between cosmopolitanism and nationalism – corresponding to cities and regions
- The divisions are both economic and cultural

Political geography in Australia is reflecting economic and social trends

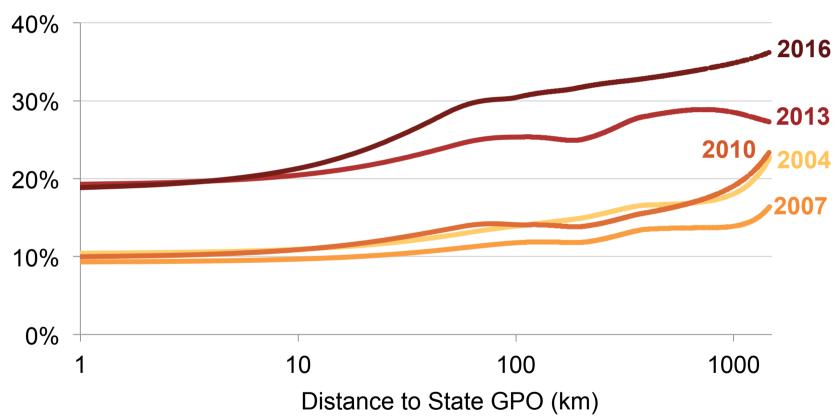

Source: AEC, Grattan Institute analysis

The geographic divide is growing wider politically

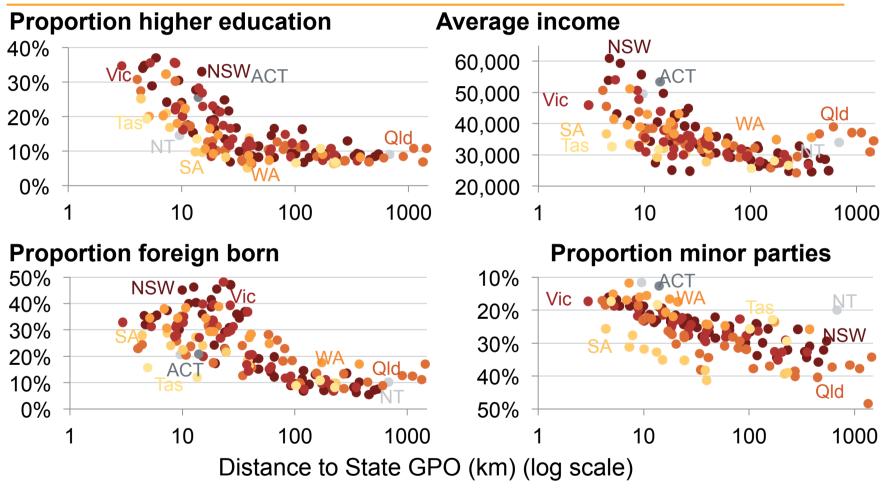

1st preference Senate votes to minor parties (not LNP, Labor, Greens) LOIS

Source: AEC, Grattan Institute analysis

Minor party votes and geography also correlate with education, income, & migrants GRATI
