

## 13A Measuring multiple disadvantage — attachment

The tables in this file accompany the report, *Overcoming Indigenous Disadvantage: Key Indicators 2009*, prepared by the Steering Committee for the Review of Government Service Provision. Background and definitions are available in the report, which is available on the Review website ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)).

This file is available in both Microsoft Excel and Adobe PDF formats on the Review website ([www.pc.gov.au/gsp](http://www.pc.gov.au/gsp)). Users without Internet access can contact the Secretariat to obtain these tables (details inside the front cover of the report).

### **13A.1 Patterns of relative Indigenous disadvantage**

- Table 13A.1.1** Non-school qualification by age, sex and remoteness (count), 2001
- Table 13A.1.2** Non-school qualification by age, sex and remoteness (proportion), 2001
- Table 13A.1.3** Unemployment by age, sex and remoteness (count), 2001
- Table 13A.1.4** Unemployment by age, sex and remoteness (proportion), 2001
- Table 13A.1.5** Not in the labour force by age, sex and remoteness (count), 2001
- Table 13A.1.6** Not in the labour force by age, sex and remoteness (proportion), 2001
- Table 13A.1.7** Equivalised household income, by age, sex and remoteness (count), 2001
- Table 13A.1.8** Equivalised household income, by age, sex and remoteness (proportion), 2001
- Table 13A.1.9** Individual income, by age, sex and remoteness (count), 2001
- Table 13A.1.10** Individual income, by age, sex and remoteness (proportion), 2001
- Table 13A.1.11** Housing tenure type, by age, sex and remoteness (count), 2001
- Table 13A.1.12** Housing tenure type, by age, sex and remoteness (proportion), 2001
- Table 13A.1.13** Housing overcrowding by age, sex and remoteness (count), 2001
- Table 13A.1.14** Housing overcrowding by age, sex and remoteness (proportion), 2001
- Table 13A.1.15** Non-school qualification by age, sex and remoteness (count), 2006
- Table 13A.1.16** Non-school qualification by age, sex and remoteness (proportion), 2006
- Table 13A.1.17** Unemployment by age, sex and remoteness (count), 2006
- Table 13A.1.18** Unemployment by age, sex and remoteness (proportion), 2006
- Table 13A.1.19** Not in the labour force, people aged 15–64 years, by age, sex and remoteness (count), 2006
- Table 13A.1.20** Not in the labour force by age, sex and remoteness (proportion), 2006
- Table 13A.1.21** Equivalised household income, by age, sex and remoteness (count), 2006
- Table 13A.1.22** Equivalised household income, by age, sex and remoteness (proportion), 2006
- Table 13A.1.23** Individual income, by age, sex and remoteness (count), 2006
- Table 13A.1.24** Individual income, by age, sex and remoteness (proportion), 2006
- Table 13A.1.25** Housing tenure type, by age, sex and remoteness (count), 2006
- Table 13A.1.26** Housing tenure type, by age, sex and remoteness (proportion), 2006
- Table 13A.1.27** Housing overcrowding by age, sex and remoteness (count), 2006
- Table 13A.1.28** Housing overcrowding by age, sex and remoteness (proportion), 2006

### **13A.2 Patterns of multiple disadvantage**

- Table 13A.2.1** Associations between education and labour force status, people aged 25–64 years (count), 2001
- Table 13A.2.2** Associations between education and labour force status, people aged 25–64 years (proportion), 2001
- Table 13A.2.3** Associations between education and individual income, people aged 25–64 years (count), 2001
- Table 13A.2.4** Associations between education and individual income, people aged 25–64 years (proportion), 2001

## Attachment contents

- 
- Table 13A.2.5** Associations between education and household income, people aged 25–64 years (count), 2001
- Table 13A.2.6** Associations between education and household income, people aged 25–64 years (proportion), 2001
- Table 13A.2.7** Associations between education and housing tenure type, people aged 25–64 years (count), 2001
- Table 13A.2.8** Associations between education and housing tenure type, people aged 25–64 years (proportion), 2001
- Table 13A.2.9** Associations between education and housing overcrowding, people aged 25–64 years (count), 2001
- Table 13A.2.10** Associations between education and housing overcrowding, people aged 25–64 years (proportion), 2001
- Table 13A.2.11** Associations between labour force status and individual income, people aged 15–64 years (count), 2001
- Table 13A.2.12** Associations between labour force status and individual income, people aged 15–64 years (proportion), 2001
- Table 13A.2.13** Associations between labour force status and household income, people aged 15–64 years (count), 2001
- Table 13A.2.14** Associations between labour force status and household income, people aged 15–64 years (proportion), 2001
- Table 13A.2.15** Associations between labour force status and tenure type, people aged 15–64 years (count), 2001
- Table 13A.2.16** Associations between labour force status and tenure type, people aged 15–64 years (proportion), 2001
- Table 13A.2.17** Associations between labour force status and housing overcrowding, people aged 15–64 years (count), 2001
- Table 13A.2.18** Associations between labour force status and housing overcrowding, people aged 15–64 years (proportion), 2001
- Table 13A.2.19** Associations between education and labour force status, people aged 25–64 years (count), 2006
- Table 13A.2.20** Associations between education and labour force status, people aged 25–64 years (proportion), 2006
- Table 13A.2.21** Associations between education and individual income, people aged 25–64 years (count), 2006
- Table 13A.2.22** Associations between education and individual income, people aged 25–64 years (proportion), 2006
- Table 13A.2.23** Associations between education and household income, people aged 25–64 years (count), 2006
- Table 13A.2.24** Associations between education and household income, people aged 25–64 years (proportion), 2006
- Table 13A.2.25** Associations between education and housing tenure type, people aged 25–64 years (count), 2006
- Table 13A.2.26** Associations between education and housing tenure type, people aged 25–64 years (proportion), 2006

## Attachment contents

- 
- Table 13A.2.27** Associations between education and housing overcrowding, people aged 25–64 years (count), 2006

- (a) Cells in this table have been randomly adjusted to avoid the release of confidential data.
- (b) Based on place of enumeration excluding overseas visitors.
- (c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.  
The measure assesses the bedroom requirements of a household by specifying that:
  - there should be no more than two persons per bedroom
  - children less than 5 years of age of different sexes may reasonably share a bedroom
  - children 5 years of age or older of opposite sex should have separate bedrooms
  - children less than 18 years of age and of the same sex may reasonably share a bedroom
  - single households members 18 years or over should have a separate bedroom, as should parents or couples.
 Households living in dwellings where this standard cannot be met are considered to be overcrowded.
- (d) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.
- (e) Includes 'Migratory'.

Source: ABS (unpublished) derived from the *2001 Census of Population and Housing*.

- (a) Cells in this table have been randomly adjusted to avoid the release of confidential data.
- (b) Based on place of enumeration excluding overseas visitors.
- (c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.

The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom
- children less than 5 years of age of different sexes may reasonably share a bedroom
- children 5 years of age or older of opposite sex should have separate bedrooms
- children less than 18 years of age and of the same sex may reasonably share a bedroom
- single households members 18 years or over should have a separate bedroom, as should parents or couples.

Households living in dwellings where this standard cannot be met are considered to be overcrowded.

- (d) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.

- (e) Includes 'Migratory'.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Count of persons enumerated in an occupied private dwelling, excluding 'Visitors only' and 'Other not classifiable' households.

(c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.

The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom;
  - children less than 5 years of age of different sexes may reasonably share a bedroom;
  - children 5 years of age or older of opposite sex should have separate bedrooms;
  - children less than 18 years of age and of the same sex may reasonably share a bedroom; and
  - single households members 18 years or over should have a separate bedroom, as should parents or couples.
- Households living in dwellings where this standard cannot be met are considered to be overcrowded.

(d) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.

Not stated	7.4	92.6	100.0
Total	6.0	94.0	100.0

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Count of persons enumerated in an occupied private dwelling, excluding 'Visitors only' and 'Other not classifiable' households.

Table 13A.2.18

**Table 13A.2.18 Associations between labour force status and housing overcrowding, people aged 15–64 years (proportion), 2001 (a), (b), (c)**

- 
- (c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness.  
The measure assesses the bedroom requirements of a household by specifying that:  
- there should be no more than two persons per bedroom;  
- children less than 5 years of age of different sexes may reasonably share a bedroom;  
- children 5 years of age or older of opposite sex should have separate bedrooms;  
- children less than 18 years of age and of the same sex may reasonably share a bedroom; and  
- single households members 18 years or over should have a separate bedroom, as should parents or couples.  
Households living in dwellings where this standard cannot be met are considered to be overcrowded.
- (d) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.

	Fully owned/being purchased (c) %	Not fully owned or being purchased (d) %	Total (e) %
Total			
Has non-school qualification (g)	75.6	24.4	100.0
Does not have a non-school qualification (h)	71.3	28.7	100.0
Total (i)	73.4	26.6	100.0

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Count of persons enumerated in an occupied private dwelling, excluding 'Visitors only' and 'Other not classifiable' households.

(c) Comprises 'Fully owned', 'Being purchased', and 'Being purchased under a rent/buy scheme'.

(d) Comprises 'Rented', 'Being occupied rent free', 'Being occupied under a life tenure scheme', and 'Other tenure type'.

(e) Excludes those who did not state their tenure type.

(f) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.

(g) Comprises 'Postgraduate Degree', 'Graduate Diploma & Graduate Certificate', 'Bachelor Degree', 'Advanced Diploma & Diploma', and 'Certificate'.

(h) Comprises 'Persons who have a qualification that is out of scope of this classification', 'Persons with no qualification' and 'Persons still studying for a first qualification'.

(i) Total includes 'Level of education not stated/inadequately described'.

- (a) Cells in this table have been randomly adjusted to avoid the release of confidential data.
  - (b) Count of persons enumerated in an occupied private dwelling, excluding 'Visitors only' and 'Other not classifiable' households.
  - (c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness. The measure assesses the bedroom requirements of a household by specifying that:
    - there should be no more than two persons per bedroom;
    - children less than 5 years of age of different sexes may reasonably share a bedroom;
    - children 5 years of age or older of opposite sex should have separate bedrooms;
    - children less than 18 years of age and of the same sex may reasonably share a bedroom; and
    - single households members 18 years or over should have a separate bedroom, as should parents or couples.
 Households living in dwellings where this standard cannot be met are considered to be overcrowded. Excludes 'Visitor only', and 'Other not classifiable' households.
  - (d) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.
  - (e) Comprises 'Postgraduate Degree', 'Graduate Diploma & Graduate Certificate', 'Bachelor Degree', 'Advanced Diploma & Diploma', and 'Certificate'.
  - (f) Comprises 'Persons who have a qualification that is out of scope of this classification', 'Persons with no qualification' and 'Persons still studying for a first qualification'.
  - (g) Total includes 'Level of education not stated/inadequately described'.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data.

(b) Based on place of enumeration excluding overseas visitors.

(c) Housing overcrowding is based on the Canadian National Occupancy Standard for housing appropriateness. The measure assesses the bedroom requirements of a household by specifying that:

- there should be no more than two persons per bedroom;
  - children less than 5 years of age of different sexes may reasonably share a bedroom;
  - children 5 years of age or older of opposite sex should have separate bedrooms;
  - children less than 18 years of age and of the same sex may reasonably share a bedroom; and
  - single households members 18 years or over should have a separate bedroom, as should parents or couples.
- Households living in dwellings where this standard cannot be met are considered to be overcrowded.

(d) Includes 'Aboriginal', 'Torres Strait Islander', and 'Both Aboriginal and Torres Strait Islander'.

Source: Australian Bureau of Statistics (unpublished). 2006 Census of Population and Housing.

No Study	<i>binary</i>	-3.576	2.222	-4.319	1.508	-1.571	0.740	0.610	0.457				

M.E. = Marginal effect. S.E. = Standard error. no. = Number. ns = Not significant as variable removed from regression. c/w = Compared with.

- (a) For a binary variable, the marginal effect is the estimated effect on the dependent variable of changing the binary variable from '0' to '1'. For a continuous variable, the marginal effect is the estimated effect on the dependent variable of changing the selected continuous variable by one unit from the mean value of the independent variable, holding the value of all other modelled independent variables at their means. See table 13A.3.3 for definitions of variables.
- (b) The standard error of an estimated coefficient is an indication of the extent to which the estimated coefficient fluctuates or varies around its mean value.
- (c) So that the marginal effects presented here are readily interpretable, the age and potential workforce experience estimates are divided by 10, and the age squared and potential workforce experience squared estimates are divided by 100, so that those marginal effects are reported in terms of a single year. Age and potential work force experience were estimated in terms of 10 years, and age squared and potential workforce experience squared were estimated in terms of 100 years, so that the magnitude of those independent variables were comparable in magnitude to the other independent variables modelled. Scaling facilitates the solution of the models and is a standard practice in econometric estimation.
- (d) For a group of binary variables — such as jurisdiction, education or post-school field of study — one binary variable from each group is omitted when a constant term is included in the regression, as the value of the omitted variable from each group is included in the constant term. As this regression includes a constant term, each of the non-omitted binary variables in a group of binary variables is interpreted with reference to the omitted binary variable, which is the 'base case' for each group.

.. Not applicable.

**Table 13A.3.2 Marginal effects of explanatory variables in unemployment models, people aged 15 to 64 years, 2006 (a)**

Unit	Indigenous				Non-Indigenous			
	Males		Females		Males		Females	
M.E.	S.E. (b)	M.E.	S.E. (b)	M.E.	S.E. (b)	M.E.	S.E. (b)	
M.E. = Marginal effect. S.E. = Standard error. no. = Number. ns = Not significant as variable removed from regression. c/w = Compared with.								

- (a) For a binary variable, the marginal effect is the estimated effect on the dependent variable of changing the binary variable from '0' to '1'. For a continuous variable, the marginal effect is the estimated effect on the dependent variable of changing the selected continuous variable by one unit from the mean value of the independent variable, holding the value of all other modelled independent variables at their means. See table 13A.3.3 for definitions of variables.
- (b) The standard error of an estimated coefficient is an indication of the extent to which the estimated coefficient fluctuates or varies around its mean value.
- (c) So that the marginal effects presented here are readily interpretable, the age and potential workforce experience estimates are divided by 10, and the age squared and potential workforce experience squared estimates are divided by 100, so that those marginal effects are reported in terms of a single year. Age and potential work force experience were estimated in terms of 10 years, and age squared and potential workforce experience squared were estimated in terms of 100 years, so that the magnitude of those independent variables were comparable in magnitude to the other independent variables modelled. Scaling facilitates the solution of the models and is a standard practice in econometric estimation.
- (d) For a group of binary variables — such as jurisdiction, education or post-school field of study — one binary variable from each group is omitted when a constant term is included in the regression, as the value of the omitted variable from each group is included in the constant term. As this regression includes a constant term, each of the non-omitted binary variables in a group of binary variables is interpreted with reference to the omitted binary variable, which is the 'base case' for each group.

.. Not applicable.

**Table 13A.3.3 Definition of variables, people aged 15 to 64 years, 2006 (a)**

Variable name	ABS variable	Unit	Definition
<b>Dependent variables</b>			
In labour force	LFS06P	binary	Labour force member in week prior to Census night
Unemployed	LFS06P HRSP	binary hrs/week	Unemployed labour force member in week prior to Census night Number of hours worked per week worked in all jobs in the week prior to Census night
Hours worked			
Income	INCP	\$/week	Gross income usually received each week
<b>Population group</b>			
Gender	SEXP	binary	Sex of person, imputed if not stated
Indigenous	INGP	binary	Indigenous status
<b>Independent variables</b>			
<i>Experience</i>			
Age	AGEP	no.	Age of person
Age squared	AGEP	no.	Age of person squared
Potential workforce experience	HSCP, QALLP	no.	Age of person minus years of education, assuming no year not repeated
Potential workforce experience squared	HSCP, QALLP	no.	Age of person minus years of education, squared, assuming no year repeated
<i>Personal and family characteristics</i>			
no. children under 5 years old in family	FMCF	no.	Number of children in a family under 5 years old
no. children aged between 5 and 17 years in family	FMCF	no.	Number of children in family aged between 5 and 17 years old
Weekly income of other family members modelled	FINASF	\$'000/week	Weekly income of all other family members other than the person modelled
Private transport c/w no. working age family members	VEHD, AGEP, ABSFIG	no.	Sum of registered private vehicles minus no. working age family members in household
Overcrowding (Canadian occupancy standard)	BEDD, AGEP, SEXP, ABSFIG	no.	no. of bedrooms in occupied private dwelling minus no. of individuals in dwelling classified by Canadian occupancy categories
Unpaid domestic work	DOMP	hrs/week	no. of hours spent performing unpaid domestic work in own home or other places in the week prior to the Census
Speaks English at home	LANP	binary	Language spoken at home. 'English' records the response of a person who only speaks English at home

**Table 13A.3.3 Definition of variables, people aged 15 to 64 years, 2006 (a)**

Variable name	ABS variable	Unit	Definition
Non-English speaker at home, English proficiency good	ENGP	binary	Speaks a language other than English at home. Speaks English either 'well' or 'very well'
Non-English speaker at home, English proficiency poor	ENGP	binary	Speaks a language other than English at home. Speaks English either 'not well' or 'not at all'
Internet access at home	NEDD	binary	Dwelling has an Internet connection, regardless of who pays for it
Assistance needed for core activities	ASSNP	binary	Person with a profound or severe disability who needs help with personal care, mobility or communication because of a condition that has lasted 6 months or more
Provides unpaid assistance to disabled person	UNCAREP	binary	Spent time providing unpaid care, help or assistance to family members or others because of a disability, long-term illness or problems relating to old age in the two weeks prior to Census night. Includes people in receipt of Carer Allowance or Carer Payment. Excludes work done through voluntary organisation or group
Works in a voluntary capacity for organisation or group	VOLWP	binary	Spent time on unpaid voluntary work through an organisation or group in the twelve months prior to the Census
Unpaid child care provided	CHAREP	binary	Spent time caring for own or other child/children in two weeks prior to Census without pay
Address same as one year ago	MV1D	binary	Usual address on Census night compared to usual address one year earlier
Address same as five years ago	MV5D	binary	Usual address on Census night compared to usual address five years earlier
<i>Relationship status</i>			
Married	MSTP	binary	Formal registered marital status
De facto	MDCP	binary	Relationship status based on current living arrangements
Divorced	MSTP	binary	Formal registered marital status
Separated	MSTP	binary	Formal registered marital status
Widow	MSTP	binary	Formal registered marital status
Couple	FMCF	binary	Couple family, with or without children
Single parent	FMCF	binary	One parent family
<i>Geographical location</i>			

Table 13A.3.3 Definition of variables, people aged 15 to 64 years, 2006 (a)

Variable name	ABS variable	Unit	Definition
Region of residence	AREAENUM	binary	Geographical area of residence coded to the statistical regions described in the Australian Standard Geographical Classification (ASGC) 2006, which, with the exception of the NT, have a minimum population of 250,000 persons, modified so that each state or territory capital city comprises at least one separate region
Lives in remote or very remote locality	AREAENUM	binary	Lived in a residence that is classified as either 'remote' or 'very remote' according to the Australian Standard Geographical Classification (ASGC) 2006
Regional unemployment rate	AREAENUM, LFS06P	%	Unemployment rate of region of usual residence
Average hours worked by employed persons in region Capital city resident	AREAENUM, AREAENUM	hrs/week binary	Average number of hours worked in usual region of residence Region of residence is the capital city of a state or a territory
<i>Jurisdiction</i>			
NSW	AREAENUM	binary	Region of residence on Census night was NSW
Victoria	AREAENUM	binary	Region of residence on Census night was Victoria
Queensland	AREAENUM	binary	Region of residence on Census night was Queensland
SA	AREAENUM	binary	Region of residence on Census night was SA
WA	AREAENUM	binary	Region of residence on Census night was WA
Tasmania	AREAENUM	binary	Region of residence on Census night was Tasmania
NT	AREAENUM	binary	Region of residence on Census night was the NT
ACT	AREAENUM	binary	Region of residence on Census night was the ACT
<i>Education, highest level completed</i>			
Degree or higher	QALLP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
Diploma	QALLP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
Certificate	QALLP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
Year 12	HSCP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
Year 11	HSCP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used

**Table 13A.3.3 Definition of variables, people aged 15 to 64 years, 2006 (a)**

Variable name	ABS variable	Unit	Definition
Year 10	HSCP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
Year 9	HSCP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
Year 8 or below	HSCP	binary	Highest level of non-school education completed. Australian Standard Classification of Education used
<i>Current student</i>			
Full time	STUP	binary	Status of student
Part time	STUP	binary	Status of student
<i>Post-school qualification, field of study</i>			
Physics and science	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Information technology	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Engineering	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Building	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Agriculture and environment	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Health	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Education	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Management and commerce	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Society and Culture	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Arts	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
Food, hospitality and personal services	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)

**Table 13A.3.3 Definition of variables, people aged 15 to 64 years, 2006 (a)**

Variable name	ABS variable	Unit	Definition
No Study	QALFP	binary	Field of study of highest completed non-school qualification using Australian Standard Classification of Education (ASCED)
<i>Employment, sector and CDEP</i>			
Commonwealth	GNGP	binary	Employer's business name and workplace address were used to classify employed persons into industry sector. If sector cannot be determined, responses are coded to the private sector
Local government	GNGP	binary	Employer's business name and workplace address were used to classify employed persons into industry sector. If sector cannot be determined, responses are coded to the private sector
State government	GNGP	binary	Employer's business name and workplace address were used to classify employed persons into industry sector. If sector cannot be determined, responses are coded to the private sector
Private enterprise	GNGP	binary	Employer's business name and workplace address were used to classify employed persons into industry sector. If sector cannot be determined, responses are coded to the private sector
CDEP participant (Indigenous only)	CDEP	binary	Indigenous Community Development Employment Project participant
<i>Occupation</i>			
Managers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
Professionals	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
Technicians and trades workers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
Community and personal service workers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
Clerical and administrative workers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
Sales workers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
Machinery operators and drivers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)

**Table 13A.3.3 Definition of variables, people aged 15 to 64 years, 2006 (a)**

Variable name	ABS variable	Unit	Definition
Labourers	OCC06P	binary	Occupation in main job using Australian and New Zealand Standard Classification of Occupations (ANZSCO)
<i>Industry</i>			
Agriculture, forestry and fishing	IND06P	binary	Industry of employment using Australian and New Zealand Standard Industry Classification (ANZSIC) 2006
Mining	IND06P	binary	Industry of employment using Australian and New Zealand Standard Industry Classification (ANZSIC) 2006
Manufacturing	IND06P	binary	Industry of employment using Australian and New Zealand Standard Industry Classification (ANZSIC) 2006
Electricity, gas, water and waste services	IND06P	binary	Industry of employment using Australian and New Zealand Standard Industry Classification (ANZSIC) 2006
Construction	IND06P	binary	Industry of employment using Australian and New Zealand Standard Industry Classification (ANZSIC) 2006

Unit	Indigenous						Non-Indigenous					
	Males			Females			Males			Females		
	Mean	S.D.	(b)	Mean	S.D.	(b)	Mean	S.D.	(b)	Mean	S.D.	(b)
S.D. = Standard deviation. c/w = Compared with.												

- (a) See table 13A.3.3 for definitions of variables.
- (b) The standard deviation is a measure of the variability of the population the estimate is calculated from around its mean. A low standard deviation indicates that the estimates tend to be close to the mean while a large standard deviation indicates that the estimates are 'spread out' over a large range of values.
- (c) For Indigenous people the sample is all people who indicated they were Indigenous on the Census form aged from 15 to 64. For similarly aged non-Indigenous people, one-in-ten people were randomly selected to form the sample. As some of the people in that sample did not nominate their labour force status, the initial one-in-ten sample was reduced by a small number of people. The non-Indigenous population was sampled to reduce the regression solution time to a reasonable length.

np Not published.

Source: Productivity Commission estimates; ABS (unpublished) derived from the 2006 Census of Population and Housing.

Coeff. = Coefficient. S.E. = Standard error. no. = Number. n.s. = not significant, variable removed from regression. c/w = Compared with.

- (a) See table 13A.3.3 for definitions of variables.
- (b) The standard error of an estimated coefficient is an indication of the extent to which the estimated coefficient fluctuates or varies around its mean value.
- (c) The variables age and potential workforce experience were scaled in each model by dividing by 10, which means that age squared and potential workforce experience were scaled by dividing by 100. The coefficients presented here are the estimated coefficients after that transformation. The scaling of variables, such as age and potential work force experience, is a standard practice in econometric estimation to facilitate the solution of a model.
- (d) For a group of binary variables — such as jurisdiction, education or post-school field of study — one binary variable from each group is omitted when a constant term is included in the regression, as the value of the omitted variable from each group is included in the constant term. As this regression includes a constant term, each of the non-omitted binary variables in a group of binary variables is interpreted with reference to the omitted binary variable, which is the 'base case' for each group.

Coef. = Coefficient. S.E. = Standard error. no. = Number. ns = Not significant, variable removed from regression. c/w = Compared with.

- (a) See table 13A.3.3 for definitions of variables.
- (b) The standard error of an estimated coefficient is an indication of the extent to which the estimated coefficient fluctuates or varies around its mean value.
- (c) The variables age and potential workforce experience were scaled in each model by dividing by 10, which means that age squared and potential workforce experience were scaled by dividing by 100. The coefficients presented here are the estimated coefficients after that transformation. The scaling of variables, such as age and potential work force experience, is a standard practice in econometric estimation to facilitate the solution of a model.
- (d) For a group of binary variables — such as jurisdiction, education or post-school field of study — one binary variable from each group is omitted when a constant term is included in the regression, as the value of the omitted variable from each group is included in the constant term. As this regression includes a constant term, each of the non-omitted binary variables in a group of binary variables is interpreted with reference to the omitted binary variable, which is the 'base case' for each group.
- .. Not applicable.

Adjusted Estrella	$1 - ((\text{LogL} - K) / \text{LogL}_0)^{-(2/N * \text{LogL}_0)}$	0.1345	0.1336	0.0632	0.0588
McFadden's LRI	$R / U$	0.1535	0.1571	0.1513	0.1391

(a) LogL = Likelihood ratio. LogL<sub>0</sub> = Likelihood ratio with a constant only fitted. N = Number of observations. K = Number of regressors.

(b) The goodness of fit measures use R, U, N and K, in addition to LogL and LogL<sub>0</sub>, to express the maximum likelihood equivalents of R<sup>2</sup>.
