Attachment tables

Attachment tables are identified in references throughout this chapter by a '14A' prefix (for example, table 14A.1). A full list of attachment tables is provided at the end of this chapter, and the attachment tables are available from the website at www.pc.gov.au/rogs/2016.

The disability policy and service delivery environment has changed significantly in recent years, most markedly with the introduction and staged implementation of the National Disability Insurance Scheme (NDIS) from 2013. Currently, assistance is provided by governments to people with disability and their carers, through specialist disability services provided under the National Disability Agreement (NDA) and through the NDIS.

This chapter provides information on services provided under the NDA, and reports NDA data from 2009-10 to 2013-14, a combination of NDA and Commonwealth-State/Territory Disability Agreement (CSTDA) data for 2008-09, and CSTDA data for earlier years. Data on the specialist disability services provided under the NDA are collected in the Disability Services National Minimum Data Set (DS NMDS). Data on NDIS participation for both 2013-14 and 2014-15 are currently included in this Report as contextual information only. Data are collected by the National Disability Insurance Agency (NDIA). Access to NDIS data will be sought for reporting against the framework in future.

Improvements in the reporting of services for people with disability in this edition include:

- additional contextual information on the number of NDA service users who have transitioned to the NDIS and the number of 'existing' NDIS State/Territory service users, plus an NDIS rollout timetable
- NDA open employment services (Disability Management Services) data which previously lagged by one year are now reported for both 2013-14 and 2014-15
- existing contextual Basic Community Care (BCC) data reported with a general population denominator to assist with cross-jurisdictional comparisons of service use.

All abbreviations used in this Report are available in a complete list in volume A: Approach to performance reporting.

14.1 Profile of disability services

Roles and responsibilities

Policy context

The NDA, effective from 1 January 2009 and revised in 2012, provides the national framework and key areas of reform for the provision of government support and services for people with disability. Box 14.1 provides an overview of the NDA.

Box 14.1 National Disability Agreement

The focus of the NDA is on the provision of specialist disability services. However, the NDA acknowledges that specialist disability services are complemented by mainstream services and income support measures. In the agreement, governments strive towards creating a disability services system that is effective, efficient and equitable, and has a focus on: early intervention; timely, person-centred approaches; and lifelong planning. Five priority areas underpin the policy directions:

- · build the evidence base for disability policies and strategies
- enhance family and carer capacity
- develop strategies for increased choice, control and self-directed decision making
- maintain innovative and flexible support models for people with high and complex needs
- develop employment opportunities for people with disability.

Source: Council of Australian Governments ((COAG) 2012a).

The NDIS was established under the *National Disability Insurance Scheme Act 2013* (the NDIS Act). Trials of the NDIS have commenced in most jurisdictions. In September 2015, NSW and Victoria became the first jurisdictions to sign bilateral agreements with the Australian Government for the full roll out of the NDIS commencing from July 2016 (see

table 14A.150 for details). The objectives of the NDIS align with the objectives and outcomes of the NDA (COAG 2012b). The NDIS will largely replace the current provision of services provided under the NDA. Nationally, most users of disability services are still receiving support under the NDA. As the NDIS continues to be implemented, more NDA service users will transition to the NDIS (see table 14A.150). Box 14.2 provides an overview of the NDIS.

Box 14.2 **National Disability Insurance Scheme**

The NDIS is an insurance scheme that assists people with disability to access mainstream and community supports, helps support informal care and funds reasonable and necessary supports, including early intervention supports, for its participants.

The NDIS was established under the National Disability Insurance Scheme Act 2013 (the NDIS Act). The NDIS Act also established the NDIA as the administering agency for the scheme.

The objectives of the NDIS as outlined under the Act include:

- · supporting people with disability to pursue their goals and maximise their independence and social and economic participation
- · developing the capacity of people with disability to participate in the community and in employment
- · providing reasonable and necessary supports, including early intervention supports, for Scheme participants
- · supporting people with disability to exercise choice and control in the pursuit of their goals and the planning and delivery of their supports
- building a sustainable Scheme which is based on insurance principles.

Source: National Disability Insurance Agency (NDIA) (2014).

The National Disability Strategy 2010–2020 was endorsed by COAG in 2011. The Strategy is designed to guide public policy across governments and aims to bring about changes to all mainstream services and programs, as well as community infrastructure, to ensure they are accessible and responsive to the needs of people with disability.

Australian, State and Territory governments

The Australian, State and Territory governments aim to ensure that people with disability and their carers have an enhanced quality of life and participate as valued members of the community. During transition to the NDIS, all governments will continue to exercise their roles and responsibilities as detailed below.

Currently under the NDA, the Australian Government is responsible for:

provision of employment services for people with disability (which includes regulation, service quality and assurance, assessment, policy development, service planning, and workforce and sector development)

- provision of income support targeted to the needs of people with disability, their families and carers
- provision of funds to states and territories to contribute to the achievement of the NDA objectives and outcomes
- ensuring that Commonwealth legislation and regulations are aligned with the national policy reform directions and the United Nations Convention on the Rights of Persons with Disabilities.

State and Territory governments are responsible for:

- the provision of specialist disability services, except disability employment services
- ensuring that State and Territory legislation and regulations are aligned with the national policy and reform directions.

Australian, State and Territory governments are jointly responsible for:

- development of national policy and reform directions to meet the agreed objectives and outcomes of the NDA
- funding and pursuing research that provides an evidence base for national policy and reform directions
- developing and implementing reforms to improve outcomes for Aboriginal and Torres Strait Islander people with disability
- where appropriate, investing in initiatives to support nationally agreed policy priorities
- the provision of data, including a commitment to providing data for the DS NMDS and a commitment to the improvement of data quality.

Under the NDIS, responsibility for the scheme's policy, funding and governance is shared by all governments. The key governance arrangements are:

- the scheme is administered by the NDIA and is governed by a Board
- the COAG Disability Reform Council makes the policy decisions relating to the NDIS
- the NDIA manages scheme funds, administers access to the scheme, approves the payment of individualised support packages and will hold all funds contributed by the Commonwealth, states and territories in a single pool
- the Commonwealth Minister is responsible for administering the NDIS Act, and exercises statutory powers with the agreement of states and territories, including power to make the NDIS Rules and direct the NDIA.

Service overview

Government assistance for people with disability and their carers comprises provision of specialist disability services, the NDIS, access to mainstream services and the provision of income support.

Specialist disability services

Specialist disability services are designed to meet the needs of people with disability. These services tend to be targeted at those who have profound or severe core activity limitations (see section 14.6 for definitions). The seven broad categories of specialist disability services are outlined below:

- accommodation support services, which provide support to people with disability in accommodation settings (hostels, institutions and group homes) and in their own homes (including attendant/personal care, in home support and alternative family placements)
- community support services, which provide the support needed for a person with disability to live in a non-institutional setting — including therapy support, counselling and early childhood intervention
- community access services, which provide opportunities for people with disability to gain and use their abilities to enjoy their full potential for social independence including learning and life skills development and recreation/holiday programs
- respite care services, which provide a short-term and time-limited break for families and other voluntary caregivers of people with disability, to assist in supporting and maintaining the primary care-giving relationship, while providing a positive experience for the person with disability
- *employment services* for people with disability, which provide:
 - open employment services assistance in obtaining and/or retaining paid employment in the open labour market
 - supported employment services support and employment within the same organisation
- advocacy, information and alternative forms of communication, which provide:
 - advocacy services to enable people with disability to increase their control over their lives by representing their interests and views in the community
 - information services to assist people with disability, their carers, families and related professionals accessing information about disabilities, specific and mainstream services and equipment; and promote the development of community awareness
 - alternative forms of communication for people who are, by reason of their disability, unable to access information provided in standard formats

• other support services, which include research and evaluation, and training and development projects.

National Disability Insurance Scheme

From 1 July 2013, people with disability can access the scheme if they are in a NDIS location, are the eligible age for that location and meet either the disability or early intervention requirements. Disability requirements include people who have a significant and permanent disability and who need assistance with everyday activities. This includes people whose disability is attributed to intellectual, cognitive, neurological, sensory, or physical impairment, or a psychiatric condition. Early intervention requirements include people who have a permanent impairment or are aged under six years with a developmental delay.

With the gradual roll-out of the NDIS across Australia, it is expected that most existing NDA service users will transition to the NDIS and exit therefore from the DS NMDS collection over time. By 2019-20, it is anticipated that all eligible Australians under the age of 65 will be covered by the NDIS (except for WA residents).¹

In 2013-14, 4051 people who used disability support services under the NDA, transitioned to the NDIS. As at 30 June 2014, there were 4883 NDIS participants who were existing State/Territory service users (that is, had transferred at some time from NDA services) (table 14.1). A number of factors affect the comparability of these data. For example:

- NDIS data are captured at a point in time and DS NMDS data (used for reporting against the NDA) are for a full financial year
- NDIS data are self-reported and some participants may have been incorrectly identified as existing NDA users when they may be new service users
- some NDA service users may no longer be receiving services under the NDA, but this has not yet been recorded in the DS NMDS (see table 14.1 for further caveats).

As at 30 June 2015, 17 303 NDIS participants had an approved plan. Participant numbers varied by State and Territory, with 4605 in NSW, 4392 in Victoria, 1199 in WA, 4660 in SA, 959 in Tasmania, 1427 in the ACT and 61 in the NT. People identifying as Aboriginal or Torres Strait Islander or classified as Culturally and Linguistically Diverse (CaLD) each made up 4 per cent of participants. Additional information on NDIS participants' access to mainstream services and client/carer satisfaction can be found in tables 14A.151-152.

_

¹ The Commonwealth and the Western Australian Government have not yet agreed to full roll-out. Rather, the State is running a comparative trial based on its 'My Way' program.

Table 14.1 Users of NDA specialist disability services who 'exited to NDIS' in 2013-14 and NDIS participants who were 'existing service users' as at 30 June 2014

		NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Total

^aData represent people who were reported in the DS NMDS who then transitioned to the NDIS and may not represent all service users who have transitioned to the NDIS. b Service users may appear as transitioned to the NDIS in jurisdictions in which there are no NDIS trial sites. This is because a service user identified as transitioning to the NDIS has moved between jurisdictions during the 12-month period. ^C Data represents people who participated in the NDIS and reported receiving funded supports from Commonwealth and State/Territory disability programs. d There were 19 active participants with approved plans for whom there was no information on whether they were previously accessing existing disability programs. na Not available .. Not applicable - Nil or rounded to zero.

Source: Australian Institute of Health and Welfare (AIHW, 2015a) Disability support services: services provided under the National Disability Agreement 2013-14 — Appendix. Cat. no. AUS 192; NDIA (published and unpublished), NDIA data collection.

Mainstream services

Mainstream services are services provided to the community as a whole. Governments acknowledge that specialist disability services are complemented by mainstream services. Under the NDA, and consistent with the National Disability Strategy, the Australian and State and Territory governments have agreed to strive to ensure that all people with disability have access to mainstream government services within their jurisdictions. It is recognised that improved outcomes for people with disability, their families and their carers, are contingent upon the effective coordination of efforts across government services. Some mainstream services give priority to people with disability (for example, social housing) or have programs to meet the special needs of people with disability (for example, school education).

Income support and allowances

Income support for people with disability and their carers contributes to the outcomes of the NDA. The Australian Government is responsible for the provision of income support targeted to the needs of people with disability, their families and carers (box 14.3). Income support is provided to those who meet the relevant eligibility criteria. Income support payments and allowances include the Disability Support Pension, Carer Payment, Carer Allowance, Sickness Allowance, Mobility Allowance, Child Disability Assistance Payment and Carer Supplement.

Box 14.3 Australian Government supplementary and income support arrangements

Outlays on income support payments and allowances to people with disability and their carers in 2014-15 (on an accrual basis) amounted to \$ 24.1 billion, comprising \$16.5 billion for the Disability Support Pension, \$4.6 billion for the Carer Payment, \$2.1 billion for the Carer Allowance, \$105.9 million for the Sickness Allowance, \$155.4 million for the Mobility Allowance, \$171.0 million for the Child Disability Assistance Payment and \$551.7 million for the Carer Supplement.

At June 2015, there were around 814 400 recipients of the Disability Support Pension, 255 500 recipients of the Carer Payment, 622 300 recipients of the Carer Allowance (including Health Care Card only recipients), 62 000 recipients of the Mobility Allowance, 7900 recipients of the Sickness Allowance, 150 800 recipients of the Child Disability Assistance Payment and 614 800 recipients of the Carer Supplement.

Source: Australian Government (unpublished); table 14A.1.

Funding

Australian. State and Territory governments fund both government non-government providers of specialist disability services under the NDA including employment services. Commonwealth funding to the State and Territory governments is provided through the National Disability Services Specific Purpose Payment, associated with the NDA. Both the Australian Government and host jurisdictions are responsible for the cost of the NDIS (COAG 2012b). See section 14.3 for details on the inclusion of cash and in-kind payments to the NDIS in this Report.

In 2014-15, total government expenditure on these services was \$8.0 billion — a real increase of 5.1 per cent from 2013-14 (table 14A.6). State and Territory governments funded the majority of this expenditure (70.3 per cent, or \$5.6 billion). The Australian Government funded the remainder (29.7 per cent, or \$2.4 billion), which included \$1.4 billion in transfer payments to states and territories and \$0.9 billion for disability employment services and other disability services (tables 14A.7-8). Table 14A.9 provides data on total government expenditure including and excluding payroll tax.

Direct government expenditure on specialist disability services under the NDA (excluding expenditure on administration) was \$7.5 billion in 2014-15 (table 14A.10). The main areas of government expenditure were accommodation support services (51.3 per cent of total direct service expenditure) and community support (17.3 per cent of total direct service expenditure). Employment services were the main area of Australian Government expenditure (82.6 per cent) (figure 14.1).

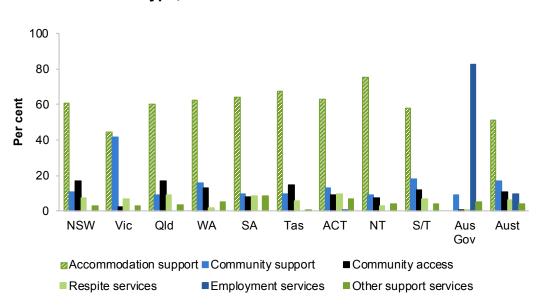

Figure 14.1 **Direct expenditure on NDA specialist disability services, by** service type, 2014-15^a

Both the Australian Government and host jurisdictions are responsible for the cost of the NDIS trial sites in accordance with Intergovernmental Agreement for the National Disability Insurance Scheme (NDIS) Launch (COAG 2012b). Total funding committed to the NDIS for 2014-15 was \$456.9 million, including cash and in-kind contributions. The average annualised package cost at 30 June 2015 was approximately \$38 423. This includes the costs of a concentration of high needs participants in Large Residential Centres (LRC) in NSW and Victoria. When LRCs are excluded, the average annualised package cost is \$33 597(NDIA 2015).²

` '

a See table 14A.10 for detailed definitions, footnotes and caveats.
Source: Australian, State and Territory governments (unpublished); table 14A.11.

The average annualised package cost is not an appropriate measure of NDIS performance when considered in isolation. Consideration should be given to factors such as the number of scheme participants, the distribution of packages committed to these participants and actual payments for supports provided which contribute to the overall cost (NDIA 2015).

Size and scope

Definitions of disability are provided in box 14.4.

Box 14.4 **Definitions of disability**

The United Nation's Convention on the Rights of Persons with Disabilities, ratified by Australia on 17 July 2008, defines 'persons with disabilities' as those who have long-term physical, mental, intellectual or sensory impairments which, in interaction with various barriers, may hinder their full and effective participation in society on an equal basis with others.

The World Health Organisation (WHO) defines 'disabilities' as impairments, activity limitations and participation restrictions: an impairment is a problem in body function or structure; an activity limitation is a difficulty encountered by an individual in executing a task or action; and a participation restriction is a problem experienced by an individual in involvement in life situations (WHO 2009).

The third CSTDA (2003, p. 9) defined 'people with disabilities' as those whose disability manifests itself before the age of 65 years and for which they require significant ongoing and/or long-term episodic support. For these people, the disability will be attributable to an intellectual, psychiatric, sensory, physical or neurological impairment or acquired brain injury (or some combination of these) which is likely to be permanent and results in substantially reduced capacity in at least one of the following: self-care/management; mobility; communication. The NDA does not include a specific definition of 'people with disability'.

The Australian Bureau of Statistics (ABS) Survey of Disability, Ageing and Carers (SDAC) defines 'disability' as a limitation, restriction or impairment, which has lasted, or is likely to last, for at least 6 months and restricts everyday activities. Examples range from hearing loss that requires the use of a hearing aid, to difficulty dressing due to arthritis, to advanced dementia requiring constant help and supervision. The SDAC reports on the spectrum of disability experiences using three main 'categories' of disability:

- with a core activity limitation (mild, moderate, severe or profound)
- with a schooling or employment restriction
- with a disability, but without a specific limitation or restriction includes people who need assistance with health care, cognition and emotion, paperwork, transport, housework, property maintenance or meal preparation.

Self-care, mobility and communication are defined as core activities. The ABS defines levels of core activity limitation as:

- mild where a person does not need assistance and has no difficulty with self-care, mobility and/or communication, but uses aids or equipment. They may also not be able to easily walk 200m, walk up and down stairs without a handrail, bend to pick up objects from the floor or use public transport easily or without help or supervision
- moderate where a person does not need assistance, but has difficulty with self-care, mobility and/or communication

(continued next page)

Box 14.4 (continued)

- severe where a person sometimes needs assistance with self-care, mobility and/or communication tasks; has difficulty understanding or being understood by family or friends; or can communicate more easily using sign language or other non-spoken forms of communication
- profound where a person is unable, or always needs assistance, to perform self-care, mobility and/or communication tasks.

Source: CSTDA (2003); WHO (2009); ABS (2013).

Disability prevalence

The ABS estimates that 4.2 million Australians, or 18.5 per cent of the population had a disability in 2012 (ABS 2013), the same proportion as in 2009 (ABS 2011a). Of the total population in 2012, an estimated 6.1 per cent had a profound or severe core activity limitation (ABS 2013) compared with 5.8 per cent in 2009 (ABS 2011a). Tables 14A.12 and 14A.13 contain additional information on disability prevalence, and table 14A.14 contains information on the estimated number of people with a profound or severe core activity limitation who received help as a proportion of those who needed help.

Males and females are similarly affected by disability (18 per cent and 19 per cent respectively), but this changes with age and severity of disability (figure 14.2).

80 60 20 20 Males Females

Figure 14.2 Disability prevalence, people with profound or severe core activity limitation, by sex, by age, 2012

Source: Australian Bureau of Statistics (ABS) (unpublished) Survey of Disability, Ageing and Carers, 2012.

Aboriginal and Torres Strait Islander people experience significantly higher rates of disability than non-Indigenous people. Nationally in 2012, after adjusting for differences in population age structures, the SDAC shows that 8.4 per cent of Aboriginal and Torres Strait Islander people reported a profound or severe core activity limitation, around 1.7 times the rate for non-Indigenous people (4.9 per cent). The disparity between Aboriginal and Torres Strait Islander and non-Indigenous people is consistent across age groups (figure 14.3). Data from the 2011–13 Australian Health Survey, whilst not directly comparable, show similar trends.

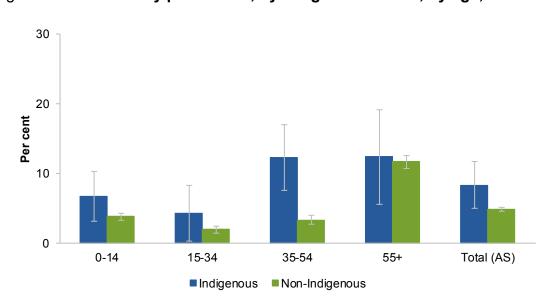

Figure 14.3 Disability prevalence, by Indigenous status, by age, 2012a

AS = Age standardised. **a** The SDAC does not survey people in very remote areas. *Source*: ABS (unpublished) Survey of Disability, Ageing and Carers.

Potential population

The potential population is an estimate, derived using a range of data sources, of the number of people with the potential to require disability support services, including individuals who meet the service eligibility criteria but who do not demand services. Results are reported as rates, which are the proportion of potential service users that are actually using the service. This allows better comparison between people in special needs groups with people outside those groups. For open employment services, the potential population is not used; instead, an estimate of all people aged 15–64 years with disability and who have an employment restriction is used. Further information on deriving potential populations for special needs groups for the 2016 Report can be found in section 14.5.

Informal carers

Family and friends provide most of the help and/or care that people with disability receive. Information about informal carers enables governments to plan ahead for the future demand for services that support carers and the people they assist. Support services that assist people with disability to live in the community, such as in-home accommodation support and community support, often complement and are contingent on the availability of informal care. In turn, the provision of informal care may rely on access to formal support services, including carer respite services and a range of services for the person with disability.

Information on informal carers is available from the SDAC, and for NDA service users from the DS NMDS. The definition of informal carers differs slightly across these data collections as:

- the SDAC defines an informal primary carer as a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities. The assistance has to be ongoing, or likely to be ongoing, for at least six months and be provided for one or more of the core activities (communication, mobility and self-care)
- the DS NMDS defines an informal carer as someone, such as a family member, friend
 or neighbour, who is identified as providing regular and sustained care and assistance
 to a person with disability (see section 14.6 for further details). Informal carers who
 provide assistance with core activities (self-care, mobility and communication) are
 defined as primary carers.

An estimated 576 400 informal primary carers aged 15–64 years provided the majority of assistance with self-care, mobility and communication for people with disability, including older people, in 2012 (ABS 2013), similar to 2009 (ABS 2011a). In 2013-14, of the 308 120 people with disability who accessed NDA specialist disability services, 44.4 per cent reported having an informal carer and 31.5 per cent reported having an informal carer who was a primary carer, with these proportions higher for people in very remote areas (54.3 per cent and 44.6 per cent respectively) (table 14A.2). Table 14A.4 provides data on the proportions of informal primary carers who are in different age groups, by location.

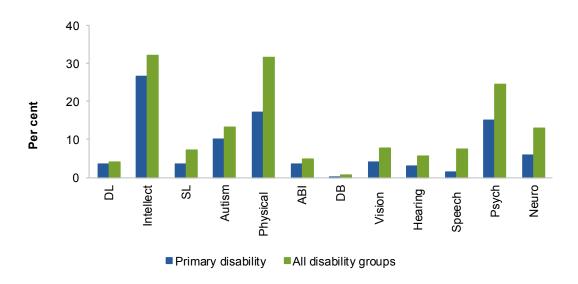

Use of NDA specialist disability services

In 2013-14, 192 915 people were reported as using specialist disability services administered by State and Territory governments under the NDA (excluding service users who received specialist psychiatric disability services only). Nationally, this is 33.8 per cent of the estimated potential population. Service use varied across service types with the largest number of users in 2013-14 reported for community support (142 159 users) and employment services (132 169 users), followed by community access (49 562

users), respite services (37 316 users) and accommodation support (37 065 users) (table 14A.15).

In 2013-14, the most commonly reported disability of NDA service users was an intellectual disability (32.3 per cent of service users, including 26.6 per cent who reported it as their primary disability) (figure 14.4). Data on users of NDA specialist disability services for people aged 0–64 years as a proportion of the estimated potential population by sex and by age are also available (table 14A.18) and in the AIHW's publication *Disability support services: Services provided under the National Disability Agreement* 2013-14 (AIHW 2015a).

Basic Community Care

Basic Community Care (BCC) services are provided under the NDA to assist people with disability to live independently and to actively participate and engage in their community. BCC services include basic maintenance and support services, including allied health care, assessment, case management and client care coordination, centre-based day care, counselling, support, information and advocacy, domestic assistance, home maintenance, nursing, personal care and respite care, social support, meals, home modification, linen service, goods and equipment, and transport.

States and Territories have full financial and operational responsibility for BCC services for people with disability aged under 65 years (and Aboriginal and Torres Strait Islander people aged under 50 years). Further information on these services can be found in sector overview F.

Nationally in 2014-15, there were 10 service users per 1000 population (non-Indigenous people under the age of 65 years and Aboriginal and Torres Strait Islander people under the age of 50 years) receiving BCC services (table 14.2).

14.2 Framework of performance indicators

Source: DSS (unpublished) HACC MDS 2014-15; table 14A.149.

The framework of performance indicators reflects governments' shared objectives and priorities under the NDA (box 14.5).

Box 14.5 Objectives of government funded services for people with disability

The long-term objective under the NDA is that:

People with disability and their carers have an enhanced quality of life and participate as valued members of the community.

All aspects of the NDA contribute to or measure progress towards this objective. The objective is enhanced by three specific outcomes as well as a set of revised priority reform areas (outlined in box 14.1). The outcomes are that:

- people with disability achieve economic participation and social inclusion
- people with disability enjoy choice, wellbeing and the opportunity to live as independently as possible
- families and carers are well supported.

In support of the agreed NDA outcomes, governments will contribute to the following outputs:

- services that provide skills and support to people with disability to enable them to live as independently as possible
- services that assist people with disability to live in stable and sustainable living arrangements
- income support for people with disability and their carers
- services that assist families and carers in their caring role

Source: COAG (2012a).

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes the outputs and outcomes of services for people with disability (figure 14.5). The performance indicator framework shows which data are complete and comparable in the 2016 Report. For data that are not considered directly comparable, text includes relevant caveats and supporting commentary. Chapter 1 discusses data comparability and data completeness from a Report-wide perspective (section 1.6).

In addition to section 14.1, the Report's statistical context chapter contains data that may assist in interpreting the performance indicators presented in this chapter. These data cover a range of demographic and geographic characteristics (chapter 2).

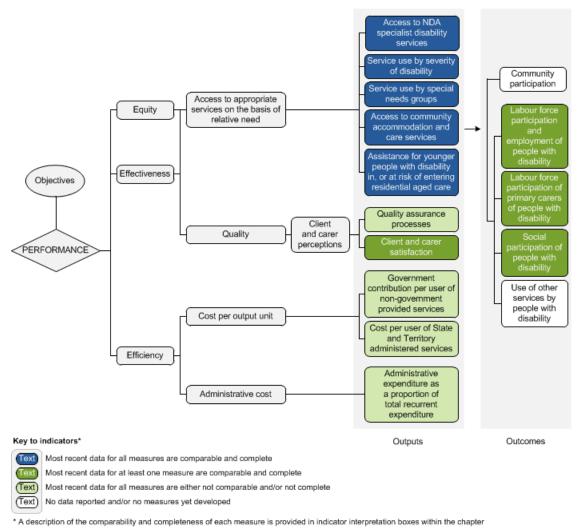

Figure 14.5 Services for people with disability performance indicator framework

Key performance indicator results

Different delivery contexts, locations and types of clients can affect the equity, effectiveness and efficiency of services for people with disability.

Data quality information (DQI) is included where available for performance indicators in this Report. The purpose of DQI is to provide structured and consistent information about quality aspects of data used to report on performance indicators, in addition to material in the chapter or sector overview and attachment tables. All DQI for the 2016 Report can be found at www.pc.gov.au/rogs/2016.

Outputs

Outputs are the services delivered (while outcomes are the impact of these services on the status of an individual or group) (see chapter 1, section 1.5). Output information is also critical for equitable, efficient and effective management of government services.

Equity and effectiveness

Access to appropriate services on the basis of relative need – Access to NDA specialist disability services

'Access to NDA specialist disability services' is an indicator of governments' objective to provide access to government funded services, including specialist disability services, on the basis of relative need and available resources (box 14.6).

Box 14.6 Access to National Disability Agreement specialist disability services

'Access to NDA specialist disability services' is defined as the number of people using a particular NDA specialist disability service divided by the potential population for that service. The potential population is an estimate of the number of people with the potential to require specialist disability services at some time. Further details on the potential population can be found in in sections 14.5 and 14.6.

Measures of services are reported for accommodation support, community support, community access, respite services and employment services (open and supported). 'Access to NDA specialist disability services' is defined as the number of people using a particular NDA specialist disability service divided by the potential population for that service. The potential population is an estimate of the number of people with the potential to require specialist disability services at some time.

Measures of services are reported for accommodation support, community support, community access, respite services and employment services (open and supported).

(continued next page)

Box 14.6 (continued)

The potential population is the number of people aged 0–64 years (and Aboriginal and Torres Strait Islander people aged 0–49 years) who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment, and who have a substantially reduced capacity in one or more core activities. For respite services, only those people with a primary carer are included. For supported employment services, only the potential population aged 15–64 years participating in the labour force are included. For open employment services, the potential population is not used; instead, an estimate of all people aged 15–64 years with a disability and who have an employment restriction is used.

In previous Reports, the numerator of an access measure included service users of all ages, unlike NDA reporting, where the numerator excludes users aged 65 years and over. For this report, the numerators of the access measures have been aligned with the age scope of the NDA and backcast to 2004-05.

A high or increasing proportion of the relevant estimated potential population using a particular NDA service suggests greater access to that service.

Not all people in the estimated potential population will need the service or seek to access the service in the relevant period. In addition, this indicator does not provide information on whether the services are appropriate for the needs of the people receiving them, or accessed by those most in need.

Data reported for this measure are:

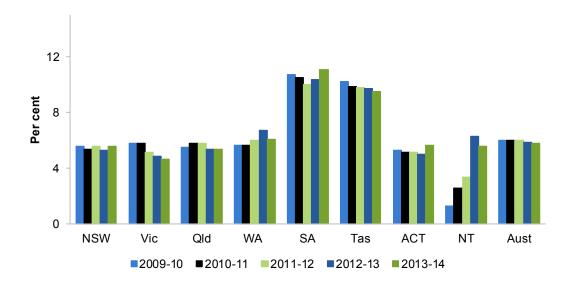

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Nationally in 2013-14, of the estimated potential population:

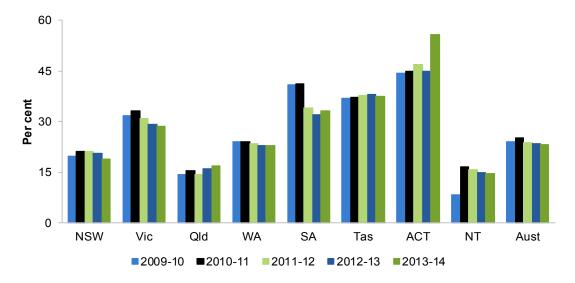

- 5.8 per cent were using NDA accommodation support services (figure 14.6)
- 23.2 per cent were using NDA community support (figure 14.7)
- 7.7 per cent were using NDA community access (figure 14.8)
- 16.4 per cent who reported having a primary carer were using NDA respite services (figure 14.9).

Nationally in 2013-14, for people aged 15-64 years with disability with an employment restriction:

- 7.5 per cent were using NDA open employment services (Employment Support Services (ESS)) (figure 14.10)
- 8.0 per cent were using NDA open employment services (Disability Management Services (DMS)) (figure 14.11).

Nationally in 2013-14, the number of people with disability who used NDA supported employment services as a proportion of the potential population (aged 15–64 years) was 6.9 per cent (figure 14.12).

Access to appropriate services on the basis of relative need – Service use by severity of disability

'Service use by severity of disability' is an indicator of governments' objective to use available resources to provide services to people on the basis of relative need (box 14.7). This indicator provides additional information for interpreting the access to NDA services measures reported above.

Data on the need for assistance (a proxy measure of relative need) are derived using information on whether support is needed in one or more of the following support areas:

- activities of daily living (ADL) self-care, mobility, and communication (the core support areas) (conceptually similar to the core activity limitations identified in the SDAC)
- activities of independent living (AIL) interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life
- or activities of work, education and community living (AWEC) education, community (civic) and economic life; and work.

Box 14.7 Service use by severity of disability

'Service use by severity of disability' is defined as the proportion of people who access NDA specialist disability services, by need for help with ADL, AIL, AWEC. Four categories are reported:

- need help with ADL
- need help with AIL or AWEC but not ADL
- · does not need assistance or information on ADL, AIL or AWEC
- not stated/collected.

Measures are reported for accommodation support, community support, community access, respite and employment services.

A high or increasing proportion of people using a particular service type who need help with ADL suggests greater access for those with the greatest level of need.

This indicator does not provide information on whether services are appropriate for the needs of the people receiving them or appropriately targeted based on relative need taking into account access to other formal and informal support.

The concept of severity of disability is associated with data on whether people need help with ADL, or AIL, or AWEC, but these data only provide a proxy measure of severity.

The need for services is assumed to vary according to the need for help with ADL, or AIL, or AWEC. Data on ADL, AIL and AWEC are self/carer identified, not based on formal clinical assessments of individual limitations. Other factors may also be important in determining relative need, such as the complexity of a service user's needs in other activity areas.

Data reported for this measure are:

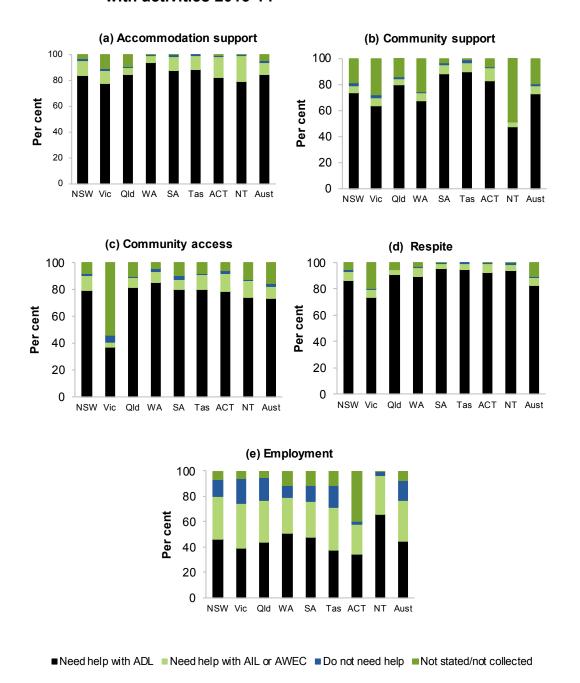

- · comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Nationally, in 2013-14:

- users of NDA services needing help with ADL was highest for accommodation services (84.3 per cent) and respite services (82.7 per cent), followed by community access services and community support services (73.4 per cent and 72.8 per cent respectively) and lowest for employment services (44.4 per cent)
- between 5-10 per cent of users of NDA services required assistance with AIL or AWEC but not with ADL, with the exception of users of employment services (32.6 per cent)
- less than 3 per cent of users of NDA services did not report any need for assistance in major life areas (except for employment services, with 15.3 per cent not reporting any need for assistance) (figure 14.13).

Figure 14.13 Users of NDA specialist disability services, by need for help with activities 2013-14^a

^a See box 14.7 and tables 14A.27, 14A.28, 14A.29, 14A.30 and 14A.31 for detailed definitions, footnotes and caveats.

Source: AIHW (unpublished) DS NMDS; tables 14A.27, 14A.28, 14A.29, 14A.30 and 14A.31.

Tables on users of NDA employment services for people aged 15–64 years as a proportion of the estimated potential population for 2007-08 to 2013-14 are also available (14A.32-33).

Access to appropriate services on the basis of relative need — Service use by special needs groups

'Service use by special needs groups' is an indicator of governments' objective that access to services should be equitable for all members of the community and provided on the basis of relative need (box 14.8). This indicator compares access for people from special needs groups with access for people from outside the special needs group.

Box 14.8 Service use by special needs groups

'Service use by special needs groups' is defined by two measures:

- the proportion of service users per 1000 population (people aged 0-64 years) in a particular special needs group, compared with the proportion of service users per 1000 population (people aged 0-64 years) outside the special needs group
- the proportion of service users per 1000 potential population in a particular special needs group, compared with the proportion of service users per 1000 potential population outside the special needs group.

Data are reported for three special needs groups:

- people from outer regional and remote/very remote areas
- · people identified as Aboriginal and Torres Strait Islander Australians
- people who were born in a non-English speaking country.

Both measures are reported for accommodation support, community support, community access and employment services. For respite services, data are reported per 1000 population only, due to data limitations.

For both measures, while a lower proportion within the special needs group relative to outside the special needs group can indicate reduced access, it can also represent strong alternative informal support networks (and a consequent lower level of otherwise unmet need), or a lower tendency of people in a special needs group to choose to access NDA specialist disability services. Similarly, a higher proportion can suggest poor service targeting, the lack of alternative informal support networks or a greater tendency of people in a special needs group to choose to access NDA specialist disability services. For the measure that compares access per 1000 population, significant differences in access can also reflect the special needs group having a higher/lower prevalence of disability.

This indicator does not provide information on whether the services are appropriate for the needs of the people receiving them, or correctly targeted on the basis of relative need. The indicator does not take into account differences in the level of informal assistance that is available for people in special needs groups and outside the special needs groups. Results for outer regional and remote/very remote users of accommodation support services, for example, should be considered with care, because alternatives to government funded accommodation support services are likely to be more readily available in these areas. This is because accommodation support services in outer regional and remote/very remote areas are largely provided informally, making use of local area coordinators and local community resources.

(continued next page)

Box 14.8 (continued)

Data reported for these measures are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Service use by special needs groups — people in outer regional and remote/very remote areas

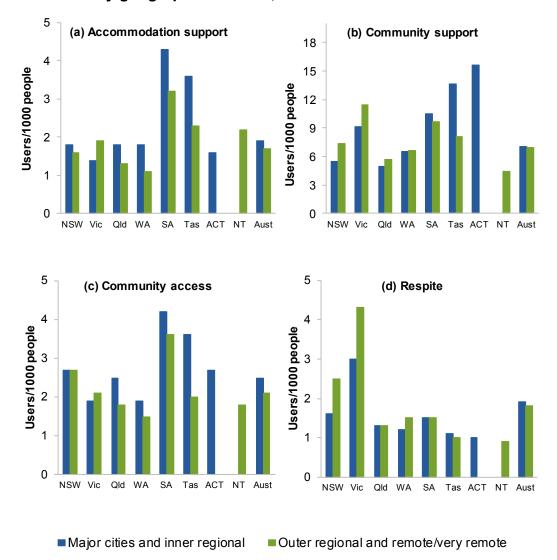

Nationally in 2013-14, the proportion of the outer regional and remote/very remote population who used NDA services was slightly lower than the proportion of the major cities/inner regional population:

- for accommodation support services, 1.7 compared to 1.9 service users per 1000 people
- for community support services, 7.0 compared to 7.1 service users per 1000 people
- for community access services, 2.1 compared to 2.5 service users per 1000 people
- for respite services, 1.8 compared to 1.9 service users per 1000 people (figure 14.14).

Service use as a proportion of the potential population followed a similar pattern, with the proportion of the outer regional and remote/very remote potential population who used NDA services lower than that of the major cities and inner regional potential population who used these services:

- for accommodation support services, 53.4 compared to 65.8 service users per 1000 potential population
- for community support services, 218.2 compared to 248.9 service users per 1000 potential population
- for community access services, 66.8 compared to 86.5 service users per 1000 potential population (figure 14.15).

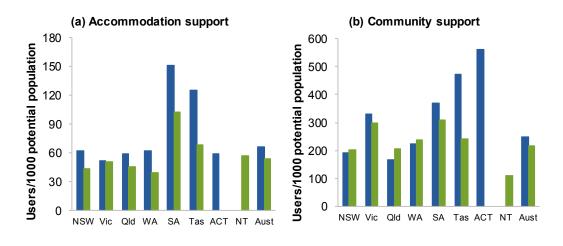

Figure 14.14 Users of NDA specialist disability services per 1000 people, by geographic location, 2013-14a, b

Nationally in 2013-14, the proportion of the outer regional and remote/very remote population who used NDA employment services (8.7 service users per 1000 population) was higher than that of the major cities and inner regional population (8.6 service users per 1000 population) (figure 14.16). However, as a proportion of the potential population, the results reflected the direction for other NDA services, with the proportion of the outer regional and remote/very remote potential population who used NDA employment services (383.0 service users per 1000 potential population) lower than that of the major cities and

^a See box 14.8 and tables 14A.34–36 for detailed definitions, footnotes and caveats ^b The ACT does not have outer regional or remote/very remote areas. The NT does not have major cities and inner regional areas. ^c Some data for Tasmania, ACT and NT community access services are not published due to privacy reasons (see table 14A.36).

inner regional potential population (449.1 service users per 1000 potential population) (figure 14.16).

Figure 14.16 Users of NDA employment services, by geographic location, 2013-14a, b

^a See box 14.8 and table 14A.38 for detailed definitions, footnotes and caveats, ^b The ACT does not have outer regional and remote/very remote areas. The NT does not have major cities or inner regional areas. Service use by special needs groups — Aboriginal and Torres Strait Islander people

Nationally in 2013-14, the proportion of the Aboriginal and Torres Strait Islander population who used NDA services was higher than the proportion of the non-Indigenous population:

- for accommodation support services, 3.1 compared to 1.8 service users per 1000 people
- for community support services, 14.9 compared to 6.7 service users per 1000 people
- for community access services, 3.4 compared to 2.3 service users per 1000 people
- for respite services, 3.0 compared to 1.8 service users per 1000 people (figure 14.17).

Service use as a proportion of the potential population showed different results, with the proportion of the Aboriginal and Torres Strait Islander potential population who used NDA services lower than that of the non-Indigenous potential population who used these services:

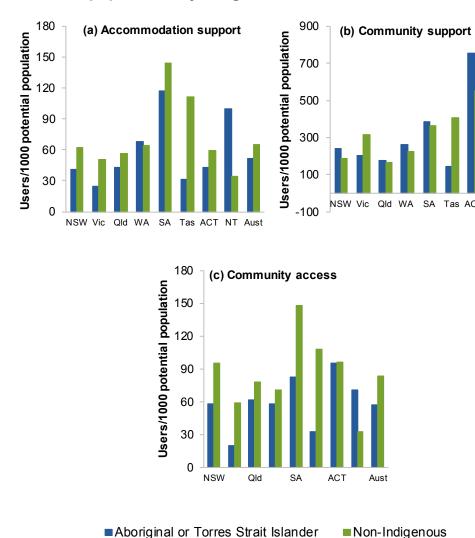

- for accommodation support services, 51.5 compared to 64.7 service users per 1000 potential population
- for community support services, 250.2 compared to 239.7 service users per 1000 potential population
- for community access services, 57.3 compared to 83.5 service users per 1000 potential population (figure 14.18).

Figure 14.17 Users of NDA specialist disability services per 1000 people, by Indigenous status, 2013-14^a

Data on users of NDA specialist disability support services as a proportion of the Aboriginal and Torres Strait Islander estimated potential population for 2008-09 to 2013-14 are also available (table 14A.39).

Nationally in 2013-14, the proportion of the Aboriginal and Torres Strait Islander population who used NDA employment services (13.9 service users per 1000 population) higher than that of the non-Indigenous population (8.4 service users per 1000 population) (figure 14.19). The proportion of the Aboriginal and Torres Strait Islander potential population who used NDA employment services (304.7 service users per 1000 potential population) was lower than that of the non-Indigenous potential population (448.7 service users per 1000 potential population) (figure 14.19). Data on users of NDA open and supported employment services as a proportion of the Aboriginal and Torres Strait Islander potential population are also available disaggregated by age (tables 14A.45–47), from 2008-09 to 2013-14 for open (ESS) and supported services and from 2010-11 to 2014-15 for open (DMS) employment services.

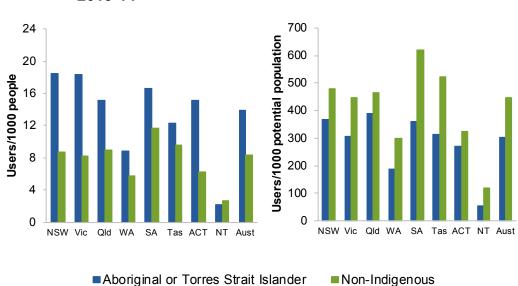

Figure 14.19 Users of NDA employment services, by Indigenous status, 2013-14^a

Source: AIHW (unpublished) DS NMDS; AIHW (unpublished), AIHW analysis of the ABS June ERP, ABS Census of Population and Housing and the ABS SDAC; table 14A.44.

Service use by special needs groups — people born in a non-English speaking country

Nationally in 2013-14, the proportion of people born in a non-English speaking country who used NDA services was lower than the proportion born in an English speaking country:

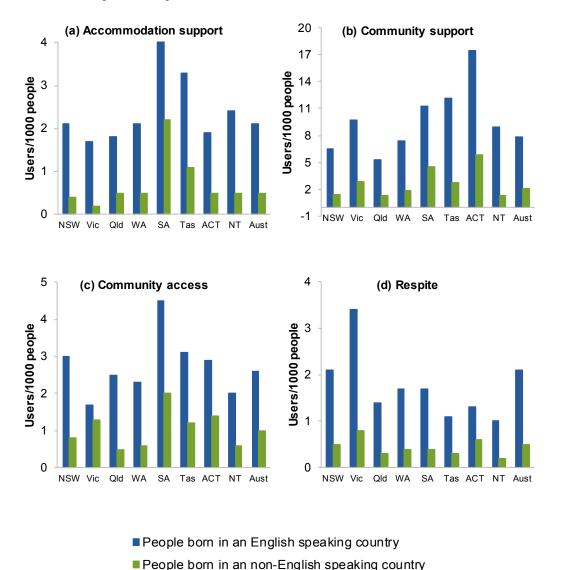

- for accommodation support services, 0.5 compared to 2.1 service users per 1000 people
- for community support services, 2.1 compared to 7.8 service users per 1000 people
- for community access services, 1.0 compared to 2.6 service users per 1000 people
- for respite services, 0.5 compared to 2.1 service users per 1000 people (figure 14.20).

Service use as a proportion of the potential population followed a similar pattern, with the proportion of the potential population born in a non-English speaking country who used NDA services lower than that of the potential population born in an English speaking country:

^a See box 14.8 and table 14A.44 for detailed definitions, footnotes and caveats.

- for accommodation support services, 25.8 compared to 68.3 service users per 1000 potential population
- for community support services, 113.3 compared to 253.0 service users per 1000 potential population
- for community access services, 51.5 compared to 83.9 service users per 1000 potential population (figure 14.21).

Access to appropriate services on the basis of relative need – Access to community accommodation and care services

'Access to community accommodation and care services' is an indicator of governments' objective to assist people with disability to live as valued and participating members of the community (box 14.9). Governments provide or fund accommodation support services to people with disability in institutional/residential settings and through community accommodation and care services. Institutional or residential accommodation support services are provided in both institutions and hostels. Community accommodation and care services are provided in group homes and other community settings. The services provided in other community settings are attendant care/personal care, in home accommodation support, alternative family placement and other accommodation support.

Qld WA SA Tas ACT NT Aust

[■] People born in an English speaking country ■ People born in an non-English speaking country

^a See box 14.8 and table 14A.52 for detailed definitions, footnotes and caveats.

Box 14.9 Access to community accommodation and care services

'Access to community accommodation and care services' is defined as the number of people using a NDA community accommodation and care service divided by the total number of people using NDA accommodation support services (excluding people who use specialist psychiatric disability services only).

A higher or increasing proportion of people accessing NDA community accommodation and care services might provide better opportunities for people with disability (who need accommodation support) to be involved in their community.

NDA specialist disability services are provided on the basis of need and available resources. This indicator does not provide information on whether the services are appropriate for the needs of the people receiving them or correctly targeted on the basis of relative need.

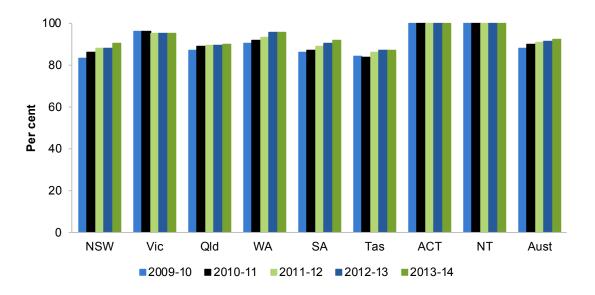

Data reported for this measure are:

- · comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2016

Nationally in 2013-14, 92.3 per cent of users of NDA accommodation support services received community accommodation and care services, an increase from 88.4 per cent in 2009-10 (figure 14.23) and 83.2 per cent since 2004-05 (table 14A.56).

Figure 14.23 Users of community accommodation and care services as a proportion of all NDA accommodation support service users^a

^a See box 14.9 and table 14A.56 for detailed definitions, footnotes and caveats. Source: AIHW (unpublished) DS NMDS; table 14A.56.

Access to appropriate services on the basis of relative need – Assistance for younger people with disability in, or at risk of entering, residential aged care

'Assistance for younger people with disability in, or at risk of entering, residential aged care' is an indicator of governments' objective to provide access to services to people with disability that are appropriate to their needs (box 14.10).

Box 14.10 Assistance for younger people with disability in, or at risk of entering, residential aged care

'Assistance for younger people in, or at risk of entering, residential aged care' is defined by two measures:

- the percentage change in numbers of younger people in residential aged care
- the percentage change in numbers of younger people admitted to residential aged care.

This indicator is considered relevant to disability service provision because, under the NDA, all governments have agreed to maintain innovative and flexible support models for people with high and complex needs, including options for younger people in, or at risk of entry to, residential aged care.

In 2006, all governments jointly funded a five-year Younger People in Residential Aged Care (YPIRAC) initiative to reduce the number of younger people with disability living in or at risk of entering residential aged care. The proportion of service users in the YPIRAC initiative, who achieved program objectives, was included in the 2013 Report and earlier editions.

In 2011, the Australian Government funding for the YPIRAC program was added to the base National Disability Specific Purpose Payment funding provided to the State and Territory governments for specialist disability services for the NDA. The YPIRAC initiative ended on 30 June 2011 and data for the program are no longer collected. However, there are still younger people living in residential aged care and the YPIRAC initiative objectives remain as agreed in the previous bilateral agreements. Data on these younger people are reported against this indicator.

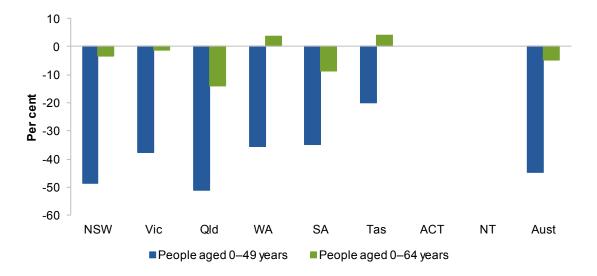

Data reported for these measures are:

- · comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2014-15 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Nationally on 30 June 2015, there were 555 people under the age of 50 years living in permanent residential aged care (table 14A.57). This is a 44.9 per cent decrease on the number of people under the age of 50 years living in permanent residential aged care on 30 June 2006 (figure 14.24).

Figure 14.24 Percentage change in numbers of younger people in residential aged care between 2006 and 2015, by age group^a

a See box 14.10 and table 14A.57 for detailed definitions, footnotes and caveats. Source: DSS (unpublished) Aged care data warehouse, table 14A.57.

Nationally in 2014-15, the number of people under the age of 50 years admitted to permanent residential aged care was 196 (table 14A.58). This is 16.2 per cent lower than the number of people under the age of 50 years admitted to permanent resident aged care in 2006-07 (figure 14.25).

Nationally in 2014-15, the number of younger people under the age of 50 years who separated from permanent residential aged care to return to home or family was 32. This is 28 per cent higher than in 2007-08 (table 14A.59). These data should be interpreted with care, as some younger people choose to remain in residential aged care for a variety of reasons, such as:

- their physical and nursing needs can be best met in residential aged care
- they are satisfied with their current living situation (that is, it is their preferred facility)
- the facility is located close to family and friends
- it is a familiar home environment.

Additional information on younger people in residential aged care, including the number of people receiving residential aged care, the rate of admission to and the separation from residential aged care, from 2006-07 to 2014-15, are available in the attachment tables (see tables 14A.60-65).

Figure 14.25 Percentage change in numbers of younger people admitted to permanent residential aged care between 2006-07 and 2014-15, by age group^a

^a See box 14.10 and table 14A.58 for detailed definitions, footnotes and caveats. *Source*: DSS (unpublished) Aged care data warehouse, table 14A.58.

Quality of services — Quality assurance processes

'Quality assurance processes' is related to governments' objective to deliver and fund disability services that meet a particular standard of quality (box 14.11).

A revised set of six National Standards for Disability Services (National Standards) were endorsed by the Australian Government and all State and Territory governments in December 2013 (box 14.12). The Australian Government and all State and Territory governments agreed to implement these minimum standards or to map jurisdictional standards to them. All State and Territory governments have developed, or are in the process of developing or re-developing, mechanisms for assessing compliance with the standards (tables 14A.66–74).

Quality assurance processes differ across jurisdictions. Most processes include some form of self-assessment. Many include, or are working toward implementing, an external third party audit/certification process. Data on quality assurance processes in 2014-15 are reported in box 14.13. These results should be interpreted with reference to tables 14A.66–74, which contain information on the legislation under which jurisdictions implement standards, the relevant disability service standards and how quality is monitored.

Box 14.11 Quality assurance processes

'Quality assurance processes' is defined as the proportion of NDA disability service outlets that have been assessed (either by an external agency or through a self-assessment process) against service standards.

A high or increasing proportion of disability service outlets that have been assessed against the standards (and are found to be compliant) suggests an improvement in the quality of government delivered or funded specialist disability services.

This indicator does not provide information on whether the standards or the quality assurance processes are appropriate. In addition, service outlets that are not quality assessed do not necessarily deliver services of lower quality.

Data reported for this measure are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- complete (subject to caveats) for the current reporting period. All required 2014-15 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Box 14.12 National Disability Service Standards

Standard One — Rights

The service promotes individual rights to freedom of expression, self-determination and decision-making and actively prevents abuse, harm, neglect and violence.

Standard Two — Participation and Inclusion

The service works with individuals and families, friends and carers to promote opportunities for meaningful participation and active inclusion in society.

Standard Three — Individual Outcomes

Services and supports are assessed, planned, delivered and reviewed to build on individual strengths and enable individuals to reach their goals.

Standard Four — Feedback and Complaints

Regular feedback is sought and used to inform individual and organisation-wide service reviews and improvement.

Standard Five — Service Access

The service manages access, commencement and leaving a service in a transparent, fair, equal and responsive way.

Standard Six — Service Management

The service has effective and accountable service management and leadership to maximise outcomes for individuals.

Source: DSS (2013) National Standards for Disability Services.

Box 14.13 Quality assurance processes for NDA specialist disability services 2014–15

Australian Government

At 30 June 2015, the Australian Government funded a total of 325 disability employment organisations comprising a total of 3371 outlets across Australia. Of these:

- Disability Employment Services (DES) made up 139 (43 per cent) of the organisations, with 3076 (91 per cent) of total outlets
- Australian Disability Enterprises (ADE) made up 186 (57 per cent) of the organisations, with 295 (9 per cent) of total outlets
- 44 (14 per cent) of the organisations operated as dual funded (both DES and ADE) employment services.

In 2014-15:

- a total of 258 quality assurance audits were performed at 80 DES organisations, 138 ADE organisations and 40 dual funded organisations
- the Department of Social Services (DSS) paid a total of \$1.7 million towards the cost of these quality assurance audits
- of the 80 audits performed at DES organisations, 23 were certification audits and 57 were surveillance audits
- of the 138 audits performed at ADE organisations, 17 were certification audits and 121 were surveillance audits
- of the 40 audits performed at dual organisations, 7 were certification audits and 33 were surveillance audits.

State and Territory governments

Different quality assurance processes were in place in states and territories 2014-15. The evaluation processes related to both government and non-government service outlets, although, in some jurisdictions, the requirements were different across service sectors.

NSW

From 1 July 2012, Ageing, Disability and Home Care (ADHC) within the Department of Family and Community Services has implemented a Quality Framework which requires funded service providers to implement a range of quality requirements, including:

- implementing a quality management system
- undertaking third party verification to demonstrate compliance against the NSW Disability Service Standards (NSW DSS).

At 30 June 2015, 98 per cent of disability funded service providers had achieved third party verification against the NSW DSS. Service providers are required to report on progress in achieving the milestones which are fundamental to the implementation of the quality requirements of ADHC.

Box 14.13 (continued)

To reduce the administrative burden faced by providers in submitting reporting requirements, an online form has been developed for the submission of Quality Framework reporting. In 2014-15 100 per cent of disability funded service providers had reported on their progress to meet the quality requirements.

NSW continues the implementation of the Quality Framework with funded service providers through the terms and conditions of the 2015-18 Funding Agreement and the ADHC Quality Policy. All disability funded service providers are required to again achieve third party verification against the NSW DSS during the term of the new funding agreement, by 30 June 2018. Community Care Support Program (CCSP) funded providers were required to meet the Home Care Standards until 30 June 2015. From 1 July 2015, CCSP funded providers will need to achieve third party verification against the NSW DSS once during the term of their 2015–18 Funding Agreement, by 30 June 2018.

ADHC continues to support the sector's readiness for the NDIS transition through a range of initiatives, including:

- training for service providers on the NSW DSS Standards in action manual and safeguard policy obligations in the NDIS trial site, including tailored training of Aboriginal providers
- implementation of the Feedback and Complaints Management Log to drive organisational policy development and continuous improvement by supporting providers to record and analyse complaints
- implementation of the Quality Framework Report to assist organisations to review service performance and progress in implementing quality requirements
- implementation of Quality Assurance and Safeguards Working Arrangements for the trial of the NDIS in NSW as agreed between the NSW and Australian governments including complaints management and serious incident reporting protocol
- extension of the Quality Assurance and Safeguards Working Arrangements for early transition to the NDIS for Children and Young People in the Nepean Blue Mountains Area of NSW.

Victoria

On 1 July 2012, the Department of Human Services Standards (the Standards) were implemented. The Standards were developed to support quality services and, in response to the assessment by service providers, so that the department's previous approach of using program based standards affects the amount of time staff could work with clients and that the approach to standards and quality reviews could be improved. The standards are summarised as:

- empowerment people's rights are promoted and upheld
- access and engagement people's right to access transparent, equitable and integrated services is promoted and upheld
- wellbeing people's right to wellbeing and safety is promoted and upheld

Box 14.13 (continued)

participation — people's right to choice, decision making and to actively participate as a
valued member of their chosen community is promoted and upheld service provider's
governance and management systems will also be reviewed using the standards of the
independent review body.

The Standards and the associated review processes replaced the Homelessness Assistance Service Standards, Standards for Disability Services in Victoria (which incorporated the National Disability Service Standards) and the Registration Standards for Community Service Organisations.

The Standards help to ensure a consistent quality of service no matter which departmentally funded service people access. Compliance with the Standards is an obligation of the Service Agreement, as well as a requirement of registration for those agencies registered either under the Children, Youth and Families Act 2005 or the Disability Act 2006. The Standards and independent review requirements apply to both internally and externally delivered services.

The first full three year cycle of implementation has just been completed. Almost all registered disability service providers have now undertaken an independent accreditation process against the Standards. Across the three year accreditation period, 99 per cent of the disability service providers successfully achieved accreditation against the Standards. Only 1 per cent failed to achieve or maintain their accreditation.

A small number of providers were exempt from independent review due to funding thresholds. Those organisations are required to complete regular self–assessments against the Standards in order to demonstrate their compliance.

Queensland

Queensland has a robust quality assurance and safeguarding framework requiring organisations funded by the Department of Communities, Child Safety and Disability services to comply with the Human Services Quality Standards (standards). The standards address the core elements of human services such as governance and management; service access, responding to individual need; safety, wellbeing and rights; feedback, complaints and appeals; and human resources.

Disability service providers are assessed for compliance with the standards and evidence requirements by Joint Accreditation System of Australia/New Zealand accredited certification bodies over a three year certification cycle. This includes a mid-cycle maintenance audit at 18 months to ensure continued compliance with the standards. The framework's goal is to provide consistency in service quality and enable continuous improvement of human services through a streamlined client focused approach.

In 2014-15, 265 recurrently funded disability service providers met their obligations to achieve and maintain certification against the standards. Of these, 37 (13.9 per cent) were required to develop and implement improvement actions to ensure ongoing compliance with the standards. One organisation had their certification temporarily suspended to enable improvement actions to be implemented and embedded. All other providers addressed the required improvement actions within appropriate timeframes.

Box 14.13 (continued)

WA

The Disability Services Commission's enhanced Quality System commenced on 1 July 2014, replacing the Quality Management Framework. The Quality System applies to all services delivered or funded by the Commission and is underpinned by the updated National Standards for Disability Services. Through the Quality System, the Commission evaluates service quality to ensure supports and services make a difference to the lives of service users, and:

- · support individuals' stated goals
- comply with the National Standards for Disability Services.

The Quality System evaluates service quality through annual self-assessment and external quality evaluation. The self-assessment enables organisations to review their policies and procedures and report on progress towards implementing the National Standards for Disability Services. The self-assessment is undertaken every April (commenced 2015). Quality evaluations incorporate external evaluation of organisations' compliance with the National Standards for Disability Services.

National Disability Services (WA) was contracted by the Commission to provide training to organisations on the revised National Standards for Disability Services and the WA Quality System. Training was delivered across the State from January 2015 to May 2015 and included information sessions and full day group training sessions.

SA

There are currently 154 organisations registered on the Disability Services Provider Panel, however only 131 received funding to provide NDA specialist services from Disability SA. Of the 131 organisations required to be engaged with an approved quality improvement program 127 (97 per cent) have completed accreditation with 4 engaged with a quality improvement program working towards accreditation.

Tasmania

The Quality and Safety Framework for Tasmania's Department of Health and Human Services (DHHS) Funded Community Sector (the Framework) requires funded community sector organisations to undertake quality and safety activities against recognised standards, have systems and processes in place to record and monitor improvement activities, and to ensure that feedback and learnings from incidents contribute towards enhancing service delivery.

The DHHS monitors compliance with the Framework through an annual meeting with the funded community sector organisation, discussing performance against contractual requirements, and a three yearly quality and safety review. The quality and safety review includes a site visit to view the organisation's documentation, systems and processes, and to obtain feedback from consumers, staff, volunteers and management including Board or Committee members.

For the period 2014-15, 11 per cent of DHHS' disability funded community sector organisations participated in a quality and safety review as per the three year cycle. All eight organisations demonstrated engagement with, and commitment to, the Framework; 63 per cent, or five of the eight organisations, evidenced compliance with all requirements of the Framework.

Box 14.13 (continued)

ACT

In 2014-15, the ACT continued implementation of the quality improvement measures for all services delivered by government and community sector service providers.

All organisations are required to undertake an annual baseline self-assessment against the National Disability Service Standards, with quality improvement action plans being developed and implemented on the basis of any identified issues.

On 1 July 2014, the National Disability Insurance Scheme (NDIS) trial began in the ACT. More than 160 organisations are now registered with the National Disability Insurance Agency (NDIA) to provide services in the ACT.

The ACT Government has developed and delivered a sector development program focussing on the capability needs of community organisations, such as governance, financial management, collaboration and strategic risk planning.

Existing safeguards will continue through the trial period. To ensure that safeguards currently in contracts apply whether or not a contract is in place, they have been placed into legislation. The Disability Services Act 1991 empowers the ACT Government to monitor and respond to breaches of safeguards. Oversight is being administered by the Human Services Registrar.

NT

Disability services funded through the NT Government Department of Health's Office of Disability are assessed against the National Standards for Disability Services and/or the NT Disability Services at least once every three years.

The review process involves a desktop review of the relevant policies and procedures associated with the service; site visits; and interviews with clients, guardians, service staff, coordinators and management. Performance against the service standards is either rated as 'met', 'partially met' or 'not met'. Where performance is rated as either partially met or not met, recommendations for service improvement are made.

A Service Improvement Plan is developed by the service provider and its implementation is monitored on a regular basis. A site visit is then conducted to monitor the service and assess whether the services provided meet the standards. Review officers may also liaise with service stakeholders such as guardians, clients, support workers, advocates and management. During the reporting period two reviews were conducted against the Northern Territory Disability Service Standards.

Service Improvement Plans have been developed and actions taken so far have resulted in significant improvements in the service quality. It is anticipated that follow up reviews will be conducted on these services in the next reporting period.

The Office of Disability has engaged the National Disability Service (NDS) to work with service providers to ensure all providers can demonstrate their compliance with the National Disability Standards. The department will provide software to assist organisations to achieve this and to meet third party verification of their practices

Source: Australian, NSW, Victorian, Queensland, WA, SA, Tasmanian, ACT and NT governments (unpublished).

Quality of services — Client and carer satisfaction

'Client and carer satisfaction' is an indicator of governments' objective to deliver and fund quality disability services that meet the needs and goals of the client (or carer of the client) receiving them (box 14.14).

Box 14.14 Client and carer satisfaction

'Client and carer satisfaction' is defined as service users' overall reported levels of satisfaction with services and satisfaction with individual services.

Results are reported from:

- · State and Territory administered client and carer satisfaction surveys and expressed as percentages
- the 2012 SDAC and are expressed as numbers and proportions.

A high or increasing proportion of clients and carers who are satisfied is desirable, as it suggests that the service received was of a higher quality and better met the needs and goals of the client or carer.

State and Territory data reported for this measure are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- incomplete for the current reporting period. 2014-15 data are only available for WA and the ACT. Data for earlier years for Queensland, WA, and the ACT were included in the 2014 Report (SCRGSP 2014, pp. 62-64).

SDAC data reported for this measure are:

- · comparable across jurisdictions
- complete (subject to caveats) for the current reporting period.

Data quality information for this indicator is available for 2012 SDAC data at www.pc.gov.au/rogs/2016. Data quality information for State and Territory data are under development.

Client and carer satisfaction' data relating to NDA specialist disability services for WA and the ACT are reported in box 14.15.

Box 14.15 Client and carer satisfaction with specialist disability services

WA

WA conducted a carer and client satisfaction survey in March 2015. In this survey, a total of 735 structured telephone interviews were completed from a sample of 1627 individuals with disability or their carers. The sample was stratified to ensure that it contained individuals representing users across all services funded by the Disability Services Commission. Of the 735 respondents, 172 (23 per cent) were service users and 563 (77 per cent) were carers responding on behalf of service users.

Overall service user satisfaction was 81 per cent. For individual services, reported satisfaction was:

- 86 per cent for accommodation
- 83 per cent for community focused supports (includes Disability Professional Services and Day Options)
- 73 per cent for coordination and individual support
- 83 per cent for family and carer support.

ACT

In 2014-15, the ACT conducted a client satisfaction survey that measured client satisfaction with all disability services funded through Disability ACT, including government provided services as well as services provided through non-government agencies.

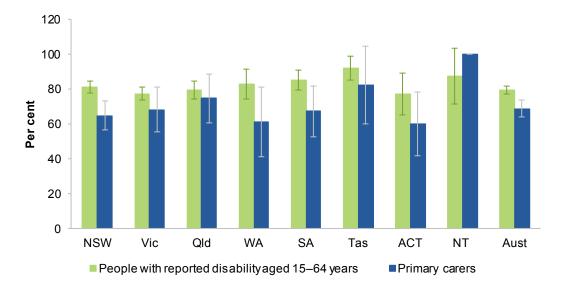

This survey asked clients to rate their overall level of satisfaction with the quality of the main disability services they had received over the past 12 months. Overall, 80 per cent of respondents to the survey reported that they were satisfied or very satisfied with disability services funded through Disability ACT.

Clients of disability services were most satisfied with how their privacy and confidentiality was respected (90 per cent satisfied). Support from staff received the second highest satisfaction rating at 86 per cent satisfied.

Data on the satisfaction of clients and carers with the quality of formal services are available from the 2012 SDAC (tables 14A.76–83). SDAC data should not be compared to State and Territory administered client and carer satisfaction data as the definition of formal services in the SDAC is broader than the scope of specialist disability services as defined by the NDA.

Nationally in 2012, the proportion of people aged 15–64 years with a reported disability who were satisfied with the quality of assistance they received from organised and formal services (79.5 per cent) was higher than the proportion of primary carers who were satisfied with the quality of formal services received to help in their caring role (69.0 per cent) (figure 14.26).

Figure 14.26 **Proportion of people with disability and primary carers** who are satisfied with the quality of assistance received^a

^a See box 14.15 and tables 14A.76 and 14A.80 for detailed definitions, footnotes and caveats. *Source*: ABS (unpublished) SDAC; table 14A.76 and table 14A.80.

Efficiency

Cost per output unit

This Report includes 2014-15 expenditure data provided by Australian, State and Territory governments. However, as 2014-15 service user data from the DS NMDS collection were not available for this Report, the cost per service user efficiency indicators are reported using expenditure and service use data for 2013-14. Expenditure data in this Report might differ from information reported elsewhere (such as in departmental annual reports) because the financial counting rules and definitions used to calculate expenditure can differ and the data here exclude users of specialist psychiatric disability services.

It is an objective of the Review to report comparable estimates of costs. Ideally, such comparisons would include the full range of costs to government. Where the full costs cannot be counted, costs are estimated on a consistent basis. The jurisdictional expenditure data included in this chapter do not yet include the user cost of capital, and so do not reflect the full costs of government funded services (user cost of capital is defined in chapter 1).

Considerable effort has been made to document any differences in calculating the reported efficiency indicators. Concerns remain over the comparability of the results, because jurisdictions use different methods of service use data collection (table 14A.75).

Financial data — cash and in-kind payments to the NDIS.

Expenditure data in this Report for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the NDIS. For those states 2013-14 total government expenditure included 'in-kind' funding to the NDIA, but excluded 'cash' contributions. For Victoria, total government expenditure included both 'cash' and 'in-kind' funding. Care should be taken when comparing the efficiency indicators across jurisdictions and over time

Financial data — expenditure items included/excluded

Financial data reported in this chapter include/exclude various expenditure items depending on the context in which the data are reported. Only direct recurrent expenditure on specific services is included (this may include administrative costs that can be directly attributed to a specific service/s). For the disability services system as a whole, expenditure includes general administrative overheads that cannot be allocated to a specific service/s and major capital grants to non-government service providers. Capital grants to non-government service providers are excluded from total recurrent expenditure for the indicator 'administrative expenditure as a proportion of total recurrent expenditure', as they are not a 'recurrent' expense. Exclusion of these grants improves the comparability of the indicator across jurisdictions and over time.

Government and non-government provided services

Efficiency indicators are reported for both government and non-government provided services. Government provision means that a service is both funded and directly provided by a government department, agency or local government. Non-government provision is a service purchased or part-funded by a government department or agency, but provided by a non-government organisation. Non-government service providers may receive funds from the private sector and the general public in addition to funding, grants and input tax concessions (such as payroll tax exemptions) from governments. Data on funds that non-government service providers receive from the private sector and the general public are outside the scope of this Report.

Cost per output unit — Government contribution per user of non-government provided services

'Government contribution per user of non-government provided services' is an indicator of governments' objective to provide specialist disability services in an efficient manner (box 14.16).

Box 14.16 Government contribution per user of non-government provided services

'Government contribution per user of non-government provided services' is defined as the net government expenditure per user of non-government provided NDA services. Measures are reported for the following non-government provided services:

- accommodation support services in:
 - institutional/residential settings
 - group homes
 - other community settings
- employment services (reported per employment service user assisted).

Holding other factors constant (such as service quality and accessibility), low or decreasing government expenditure per service user reflects a more efficient provision of this service.

Efficiency data are difficult to interpret. Although high or increasing expenditure per unit of output can reflect deteriorating efficiency, it can also reflect improvements in the quality or other attributes of the services provided, or an increase in the service needs of users. Similarly, low or declining expenditure per unit of output can reflect improving efficiency, or lower quality and less effective services. Efficiency data therefore should be interpreted within the context of the effectiveness and equity indicators to derive a holistic view of performance.

Data reported for this measure are:

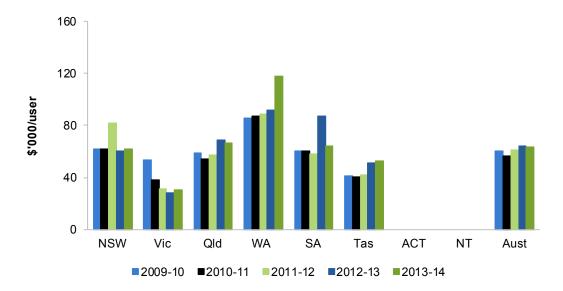

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions that provide the service.

Data quality information for this indicator is under development. Section 14.5 contains information on data quality issues.

Government contribution per user of non-government provided services accommodation support services in institutional/residential settings

Nationally in 2013-14, estimated annual government funding of non-government provided accommodation support services in institutional/residential settings was \$63 479 per service user (figure 14.27).

Figure 14.27 Estimated annual government funding per user of non-government provided accommodation support services in institutional/residential settings (2013-14 dollars)^{a, b}

^a See box 14.16 and table 14A.84 for detailed definitions, footnotes and caveats. ^b There are no non-government provided accommodation support services in institutional/residential settings in the ACT or the NT.

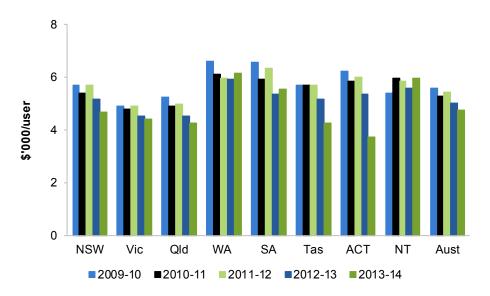

Source: AIHW (unpublished) DS NMDS 2009-10 to 2013-14; State and Territory governments (unpublished); table 14A.84.

Estimated annual government funding per user of non-government provided accommodation support services in group homes and other community settings from 2004-05 to 2013-14 are reported in table 14A.84.

Government contribution per user of non-government provided services — government contribution per employment service user assisted

Nationally, for all employment services, estimated government expenditure per service user assisted was \$4745 in 2013-14 (figure 14.28). Nationally, estimated annual government expenditure per service user in 2013-14, by employment service type, was \$3657 on open services (employed or seeking employment in the open labour market) and \$10 239 on supported services (employed by the service provider) (table 14A.86).

Figure 14.28 Government contribution per employment service user assisted (2013-14 dollars)a

a See box 14.16 and table 14A.85 for detailed definitions, footnotes and caveats. Source: Australian Government (unpublished); AIHW (unpublished) DS NMDS 2009-10 to 2013-14; table 14A.85.

Cost per output unit — Cost per user of State and Territory administered services

'Cost per user of State and Territory administered services' is an indicator of governments' objective to provide specialist disability services in an efficient manner (box 14.17).

Box 14.17 Cost per user of State and Territory administered services

'Cost per user of State and Territory administered services' is defined as government expenditure on NDA State and Territory administered services per service user. Two measures are reported:

- estimated government expenditure per user of NDA services (data are reported separately for government expenditure net of payroll tax and for government expenditure including actual and/or imputed payroll tax)
- cost per user of government provided accommodation support services in:
 - institutional/residential settings
 - group homes
 - other community settings.

Holding other factors constant (such as service quality and accessibility), low or decreasing government expenditure per service user reflects a more efficient provision of this service.

Efficiency data are difficult to interpret. Although high or increasing expenditure per unit of output can reflect deteriorating efficiency, it can also reflect improvements in the quality or attributes of the services provided, or an increase in the service needs of service users. Similarly, low or decreasing expenditure per unit of output can reflect improving efficiency, or lower quality and less effective services. Efficiency data therefore should be interpreted within the context of the effectiveness and equity indicators to derive a holistic view of performance.

Data reported for this measure are:

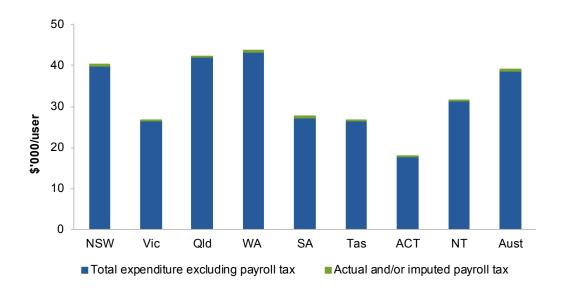

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions that provide the service.

Data quality information for this indicator is under development.

Total estimated government expenditure per user of NDA State and Territory administered specialist disability services in 2013-14 is reported both net of payroll tax and including actual or imputed payroll tax. Nationally, estimated expenditure per service user was \$38 564 excluding payroll tax and \$39 072 including actual and/or imputed payroll tax (figure 14.29).

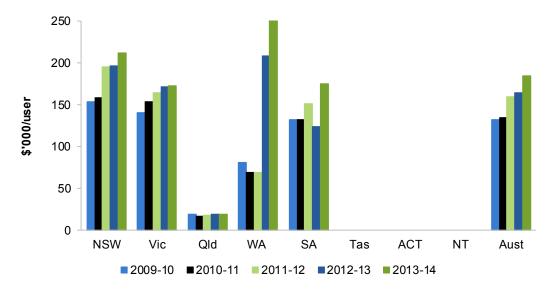

Nationally, estimated annual government expenditure on accommodation support services in institutional/residential settings was \$184 745 per service user in 2013-14 (figure 14.30).

a See box 14.17 and table 14A.87 for detailed definitions, footnotes and caveats. Source: AIHW (unpublished) DS NMDS; State and Territory governments (unpublished); table 14A.87.

Figure 14.30 Estimated annual government expenditure per user of government provided accommodation support services in institutional/residential settings (2013-14 dollars)a, b

 $[{]f a}$ See box 14.17 and table 14A.84 for detailed definitions, footnotes and caveats. ${f b}$ No government provided accommodation support services in institutional/residential settings in Tasmania, ACT or the NT. Source: AIHW (unpublished) DS NMDS; State and Territory governments (unpublished); table 14A.84.

Estimated annual government expenditure per user of government provided accommodation support services in group homes and other community settings from 2004-05 to 2013-14 are reported in table 14A.84.

Administrative cost — Administrative expenditure as a proportion of total recurrent expenditure

'Administrative expenditure as a proportion of total recurrent expenditure' is an indicator of governments' objective to provide specialist disability services in an efficient manner (box 14.18). The proportion of total expenditure on administration is not yet comparable across jurisdictions, as it is apportioned by jurisdictions using different methods (table 14A.88). However, administrative expenditure data can indicate trends within jurisdictions over time.

Box 14.18 Administrative expenditure as a proportion of total recurrent expenditure

'Administrative expenditure as a proportion of total recurrent expenditure' is defined as government expenditure on administration as a proportion of total recurrent NDA expenditure. Major capital grants to non-government service providers are excluded to improve comparability across jurisdictions and over time.

Holding other factors constant (such as service quality and accessibility), lower or decreasing administrative expenditure as a proportion of total recurrent NDA expenditure might reflect an increase in administrative efficiency.

Efficiency data are difficult to interpret. Although high or increasing administrative expenditure as a proportion of total expenditure may reflect deteriorating efficiency, it may also reflect improvements in the quality or attributes of the administrative services provided. Similarly, low or decreasing administrative expenditure as a proportion of total expenditure may reflect improving efficiency, or lower quality and less effective administrative services. This may in turn affect service delivery effectiveness. Efficiency data therefore should be interpreted within the context of the effectiveness and equity indicators to derive a holistic view of performance.

Data reported for this measure are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete (subject to caveats) for the current reporting period. All required 2014-15 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Nationally, administrative expenditure as a proportion of total government expenditure on specialist disability services (excluding actual and imputed payroll tax) decreased from 6.6 per cent in 2013-14 to 6.3 per cent in 2014-15 (figure 14.31). When actual or imputed payroll tax is included, the average national administrative expenditure as a proportion of

total NDA expenditure was 6.2 per cent in 2014-15 (table 14A.88). Real total NDA expenditure is reported in table 14A.9, both excluding and including actual or imputed payroll tax amounts.

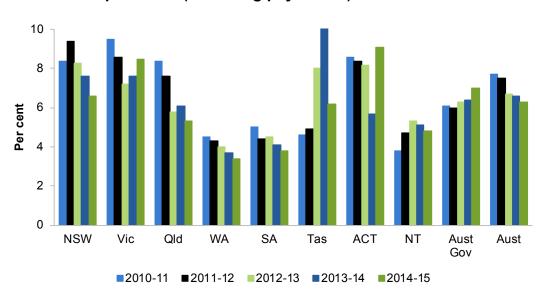

Figure 14.31 Administrative expenditure as a proportion of total recurrent expenditure (excluding payroll tax)a

Outcomes

Outcomes are the impact of services on the status of an individual or group (see chapter 1, section 1.5). For the outcome indicators reported using survey data, 95 per cent confidence intervals are presented. Information on the use of confidence intervals in the Report can be found in chapter 2.

Labour force participation and employment of people with disability

'Labour force participation and employment of people with disability' is an indicator of governments' objective of assisting people with disability to participate fully in the community (box 14.19). Participation in the labour force and employment is important to the overall wellbeing of people with disability, providing opportunities for personal development and financial independence.

a See box 14.18 and table 14A.88 for detailed definitions, footnotes and caveats. Source: Australian, State and Territory governments (unpublished); table 14A.88.

Box 14.19 Labour force participation and employment of people with disability

'Labour force participation and employment of people with disability' is defined as the labour force participation and employment rates of people aged 15–64 years with a profound or severe core activity limitation. Labour force participation rates and employment rates of people aged 15–64 years without a profound or severe core activity limitation are also reported.

Two measures are reported:

- employment to population rate for people with disability aged 15–64 years, by disability status
- unemployment rate for people with disability aged 15–64 years, all with reported disability, by disability status.

High or increasing labour force participation and employment rates for people with disability are desirable. Higher rates are likely to increase the quality of life of people with disability by providing greater opportunities for self-development and for economic and social participation.

This indicator does not provide information on why people choose not to participate in the labour force and why people are not employed. It also does not provide information on whether the employment positions are appropriate or fulfilling.

Data for these measures include 95 per cent confidence intervals (in the form of error bars in figures and percentages in tables).

Data reported for these measures are:

- comparable across jurisdictions and over time
- are complete (subject to caveats) for the current reporting period.

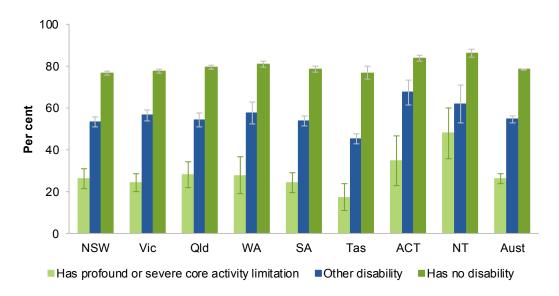

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Nationally, in 2012, the estimated employment rate of people aged 15–64 years with a profound or severe core activity limitation (26.4 per cent) was lower than the rate for people with disability excluding those with a profound or severe core activity limitation (54.7 per cent) and the rate for people with no disability (78.5 per cent) (figure 14.32).

Detailed definitions of the employment rate and its calculation method are provided in section 14.6. Employment rates should be interpreted in conjunction with labour force participation rates. Other data on the employment of people with disability, including labour force participation rates are reported in tables 14A.89–99.

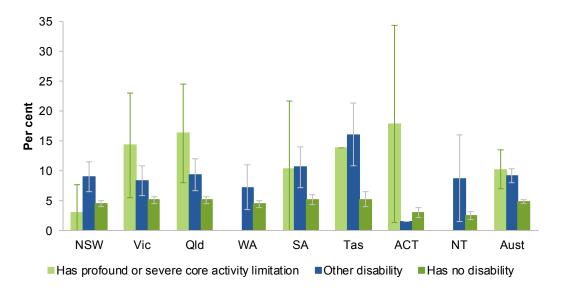

Nationally, in 2012, the estimated unemployment rate of people aged 15–64 years with a profound or severe core activity limitation (10.3 per cent) was similar to the rate for people with disability excluding those with a profound or severe core activity limitation (9.2 per cent), with both higher than the rate for people with no disability (4.9 per cent) (figure 14.33).

Figure 14.32 Employment rate for people aged 15-64 years, by disability status, 2012a

^a See box 14.19 and table 14A.90 for detailed definitions, footnotes and caveats. Source: ABS (unpublished) SDAC; table 14A.90.

Figure 14.33 Unemployment rate of people aged 15-64 years, by disability status, 2012a

a See box 14.19 and 14A.92 for detailed definitions, footnotes and caveats. Source: ABS (unpublished) SDAC; 14A.92.

Labour force participation of primary carers of people with disability

'Labour force participation of primary carers of people with disability' is an indicator of governments' objective of assisting primary carers of people with disability to participate fully in the community (box 14.20). Participation in the labour force is important to the overall wellbeing of carers, providing opportunities for personal development and financial independence.

Box 14.20 Labour force participation of primary carers of people with disability

'Labour force participation of primary carers of people with disability' is defined as the labour force participation rate for primary carers aged 15–64 years of people with disability.

Primary carer is defined as a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities. A detailed definition is provided in section 14.6.

Higher or increasing labour force participation rates for primary carers of people with disability are desirable. Higher rates are likely to increase the quality of life of primary carers of people with disability by providing greater opportunities for self-development.

This indicator does not provide information on why people choose not to participate in the labour force. It also does not provide information on whether the participation in the labour force is fulfilling.

Data for this measure include 95 per cent confidence intervals (in the form of error bars in figures and percentages in tables).

Data reported for this measure are:

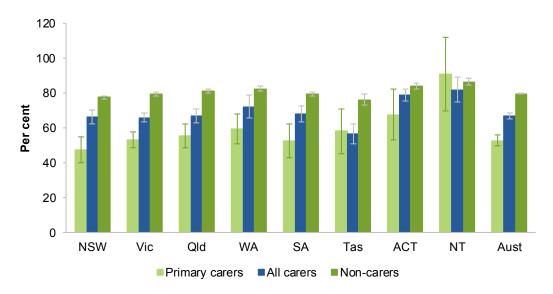

- · comparable across jurisdictions and over time
- complete (subject to caveats) for the current reporting period.

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Nationally in 2012, the estimated labour force participation rate for people aged 15–64 years of primary carers of people with disability (52.8 per cent) was less than both the estimated labour force participation rate for all carers (66.9 per cent) and the estimated labour force participation rate for non-carers (79.7 per cent) (figure 14.34).

Detailed definitions of the labour force participation rate and its calculation method are provided in section 14.6. Other data on the labour force participation for primary carers of people with disability are reported in tables 14A.101–107.

Figure 14.34 Labour force participation rate for people aged 15-64 years by carer status, by State/Territory, 2012a

a See box 14.20 and tables 14A.100 and 14A.102 for detailed definitions, footnotes and caveats. Source: ABS (unpublished) SDAC; tables 14A.100 and 14A.102.

Social participation of people with disability

'Social participation of people with disability' is an indicator of governments' objective to assist people with disability to live as valued and participating members of the community (box 14.21).

Box 14.21 Social participation of people with disability

'Social participation of people with disability' is defined as the proportion of people who participate in selected social or community activities by disability status:

- · profound or severe core activity limitation
- other disability.

A high or increasing proportion of people with disability who participate in social or community activities reflects their greater inclusion in the community.

This indicator does not provide information on the degree to which the identified types of social or community activities contribute to people's quality of life. It also does not provide information on why some people did not participate.

Data for this measure include 95 per cent confidence intervals (in the form of error bars in figures and percentages in tables).

Data reported for this measure are:

- comparable across jurisdictions and over time
- complete (subject to caveats) for the current reporting period.

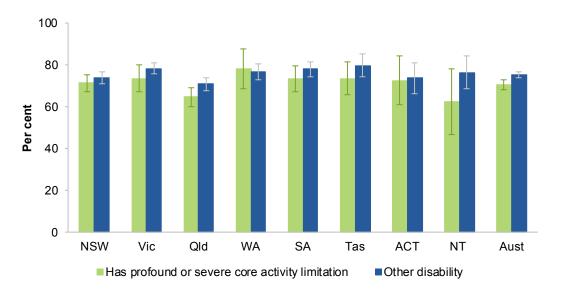

Data quality information for this indicator is at www.pc.gov.au/rogs/2016.

Nationally in 2012, the estimated proportion of people with disability aged 15–64 years with a profound or severe disability who had face-to-face contact with ex-household family or friends in the previous week (70.6 per cent) was lower than the rate for people with disability without a profound or severe core activity limitation (75.4 per cent) (figure 14.35).

Nationally in 2012, the estimated proportion of people with disability aged 5–64 years with a profound or severe disability who reported the main reason for not leaving home as often as they would like is their disability or condition (31.4 per cent) was considerably higher than the rate for people with disability without a profound or severe core activity limitation (8.2 per cent) (figure 14.36).

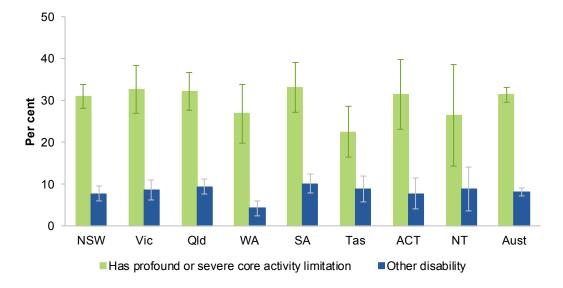

Other data on participation of people with disability in selected social and community activities are reported in tables 14A.113–121.

Figure 14.35 People with disability aged 15-64 years who had face-to-face contact with ex-household family or friends in the previous week, 2012a

a See box 14.21 and table 14A.114 for detailed definitions, footnotes and caveats. Source: ABS (unpublished) SDAC; table 14A.114.

Figure 14.36 People with disability aged 5-64 years who report the main reason for not leaving home as often as they would like is their disability or condition, by disability status, 2012a

^a See box 14.21 and table 14A.123 for detailed definitions, footnotes and caveats. Source: ABS (unpublished) SDAC; table 14A.123.

Use of other services by people with disability

'Use of other services by people with disability' is an indicator of governments' objective of enhancing the quality of life experienced by people with disability by assisting them to gain access to mainstream government services (box 14.22).

Box 14.22 Use of other services by people with disability

'Use of other services by people with disability' is yet to be defined and reported on a consistent basis.

A higher or increasing proportion of people with disability who use mainstream government services suggests greater access to these services.

This indicator does not provide information on whether the service accessed is the most appropriate, or the degree to which the service contributes to people's quality of life. It also does not provide information on why some people do not access mainstream services.

Data for this indicator were not available for the 2016 Report.

'Use of other services' data reported elsewhere in this Report

Data on the participation of people with disability in various government services are incorporated in the performance indicator frameworks for other chapters of this Report. Participation is reported for early childhood education and care (chapter 3); VET (chapter 5); social, community and State owned and managed Indigenous housing (chapter 17) and Commonwealth Rent Assistance (sector overview G). In addition, the following chapters include data on services provided to people with disability:

- 'School education' (chapter 4) reports data on students with disability in the student body mix, disaggregated by sector
- 'Mental health management' (chapter 12) reports performance data on specialised mental health services
- 'Aged care services' (chapter 13) reports data on the age-specific usage rates (including for younger people) of residential and home care services provided under the aged care program. Data are also reported on the use of HACC services, including those received by people with a profound, severe or moderate core activity limitation, for people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years
- 'Housing' (chapter 17) reports data on people with disability for the 'dwelling condition', 'amenity/location' and 'customer satisfaction' indicators.

14.4 Future directions in performance reporting

Scope for further improvements to reporting

The Steering Committee will continue to improve the appropriateness and completeness of the performance indicator framework. Future work on indicators will focus on:

- ensuring the DS NMDS remains relevant to informing the rollout of the NDIS
- seeking access to NDIS data to report against performance indicators in the framework.

Data developments in future reports may be influenced by:

- the continued implementation of the NDIS
- developments under the National Disability Strategy. The Strategy is designed to guide
 public policy across governments and aims to bring about changes to all mainstream
 services and programs, as well as community infrastructure, to ensure they are
 accessible and responsive to the needs of people with disability. Every two years, a
 high level progress report will track achievements under the Strategy and provide a
 picture of how people with disability are faring
- developments under the National Health Reform Agreement which was entered into by all states, territories and the Commonwealth in August 2011. The Agreement sets out the shared intention of the Australian, State and Territory governments to work in partnership to improve health outcomes for all Australians and ensure the sustainability of the national health system. The reforms aim to help patients gain better access to services, improve local accountability and responsiveness to the needs of communities, and provide a stronger financial basis for our health system into the future.

14.5 Service user data quality and other issues

Data quality

Data quality considerations should be taken into account when interpreting the DS NMDS service user data used in this chapter. In particular, data quality should be considered when making comparisons across jurisdictions and across years.

There are three aspects of quality that affect the accuracy and reliability of the data reported in this chapter:

- service type outlet participation rates
- service user participation rates
- 'not stated' response rates for individual data items.

The first two of these affect the service user counts — nationally, by jurisdiction and service type — and all three affect the accuracy of analyses of individual data items (AIHW 2012).

'Not stated' rates for individual data items vary between jurisdictions (AIHW 2012). Reasons for the higher level of not stated responses to some data items may be:

- the increased efforts to improve the coverage and completeness of the DS NMDS collection overall. For example, therapy services (a community support service) in the ACT participated for the first time in the 2004-05 collection. In an effort to include all users of these services, provisional data collection processes were used that meant minimal data were provided for each user (AIHW 2012)
- changes in collection practices, such as data on communication and frequency of support needed for new users of open employment services not being collected in 2010-11. This change resulted in high overall non-response rates for these items and data not being strictly comparable with previous years.

Other issues

Service user data/data items not collected

Service user data are not collected for the following NDA specialist disability service types: advocacy, information/referral, combined information/advocacy, mutual support/self-help groups, print disability/alternative formats of communication, research and evaluation, training and development, peak bodies and other support services. In addition, some service types are not required to collect all service user data items. In particular:

- 'recreation/holiday programs' (service type 3.02) are required to collect only information related to the statistical linkage key (selected letters of name, date of birth, sex, commencement date and date of last service)
- employment services (service types 5.01 and 5.02) are not required to collect selected informal carer information, including primary status (AIHW 2007).

Specialist psychiatric disability services

Data for specialist psychiatric disability services are excluded to improve the comparability of data across jurisdictions. People with psychiatric disability may use a range of NDA specialist disability service types. In some jurisdictions (Victoria and Queensland), specialist psychiatric disability services are funded specifically to provide such support (AIHW 2015b). Nationally in 2013-14, 13 411 people used only specialist psychiatric disability services (AIHW unpublished). Data for these services are included in other

publications on the DS NMDS, such as AIHW (2015a). Therefore, service user data for Victoria, Queensland, and Australia in this chapter will differ from other publications.

Statistical linkage key

A statistical linkage key is used to derive the service user counts in this chapter. The statistical linkage key enables the number of service users to be estimated from data collected from different service outlets and agencies (AIHW 2014). Using the linkage key minimises double counting of service users who use more than one service outlet during the reporting period.

The statistical linkage key components of each service record are compared with the statistical linkage key components of all other records. Records that have matching statistical linkage keys are assumed to belong to the same service user.

As the statistical linkage key is not a unique identifier, some degree of false linking is expected. A small probability exists that some of the linked records do not actually belong to the same service user and, conversely, that some records that did not link do belong to the same service user. The statistical linkage key does not enable the linking of records to the extent needed to be certain that a 'service user' is one individual person.

Missing or invalid statistical linkage keys cannot be linked to other records and so must be treated as belonging to separate service users. This may result in the number of service users being overestimated (AIHW 2015b).

Deriving potential populations for the special needs groups

Potential populations have been estimated for each of the special needs groups (outer regional and remote/very remote areas, Aboriginal and Torres Strait Islander and people born in a non-English speaking country) and for those outside of the special needs groups (major cities and inner regional areas, non-Indigenous and people born in an English speaking country). These potential populations are estimates of the number of people with the potential to require disability support services in the relevant group, including individuals who meet the service eligibility criteria but who do not use the services.

The approach used to derive the potential population estimates by country of birth and geographic location involved the following steps:

- deriving State/Territory based 10-year age and sex specific proportions of people with A Core Activity Need for Assistance by geographic location and country of birth using the 2011 Census
- multiplying these State/Territory based 10-year age and sex specific proportions by the 10-year age specific estimates of the number of people in the potential population in each State/Territory

- summing the resultant 10-year age and sex group counts to derive the total potential populations for the geographic locations, people born in Australia, people born in another English speaking country and people born in a non-English speaking country. Summing the potential populations for people born in Australia and people born in another English speaking country to derive the total potential population for people born in an English speaking country
- for employment, repeating the above steps, but restricting the calculations to those people aged 15–64 years, then multiplying each State/Territory total by State/Territory specific labour force participation rates for people aged 15–64 years.

The approach used to derive the potential populations by Indigenous status involved the following steps:

- deriving current State/Territory based 10-year age and sex specific rate ratios of people with ASSNP by Indigenous status using the 2011 Census
- multiplying the current State/Territory Aboriginal and Torres Strait Islander and non-Indigenous 10-year age and sex population estimates by national 10-year age and sex specific rates of the potential population from the 2012 SDAC. Then multiplying the Aboriginal and Torres Strait Islander and non-Indigenous counts for each 10-year age and sex group by the 10-year age and sex specific rate ratios of people with ASSNP to obtain an Aboriginal and Torres Strait Islander/non-Indigenous potential population within each age and sex group
- summing the 10-year age and sex group counts to derive a total Aboriginal and Torres Strait Islander and non-Indigenous potential population for each State/Territory
- for employment, repeating the above steps, but restricting the calculations to those people aged 15–64 years, then multiplying each State/Territory total by State/Territory specific labour force participation rates for people aged 15–64 years.

Updated source data used in the calculation of the potential population were available for the 2015 Report. The potential population was recalculated based on data from the 2012 SDAC and 2011 Census, and was been backcast to the 2008-09 year. New Aboriginal and Torres Strait Islander potential population estimates were calculated for people aged 0–49 using new 2011 Census-based Indigenous Population Projections (previously calculated using 2006 Census-based Indigenous Population Projections) and backcast to the 2008-09 year.

Data quality issues

Data measuring the potential populations of the special needs groups are not explicitly available for the required time periods and have been estimated using several different data sources (as noted above), under several key assumptions. Some issues with this approach are:

- The method used to estimate the potential populations assumes:
 - that disability rates vary only by age and sex, and there is no effect of remoteness, disadvantage, or any other variable this is likely to affect the reliability of comparisons across states and territories, however, it is currently not possible to detect the size or direction of any potential bias
 - that age- and sex-specific disability rates do not change significantly over time.
- The rate ratio/proportion adjustments (that is, multiplication) assumes consistency between the rate ratio/proportion as calculated from the 2011 Census and the corresponding information if it were collected from the 2012 SDAC. Two points to note about this assumption are that:
 - information about people with ASSNP is based on the self-enumeration of four questions under the 2011 Census (although personal interviews were conducted in Aboriginal and Torres Strait Islander communities), whereas in SDAC 2012 people are deemed to be in the potential population on the basis of a comprehensive interviewer–administered module of questions although the two populations are different, they are conceptually related
 - the special needs groups identification may not be the same between the 2011 Census and the 2012 SDAC (ABS research indicates, for example, that the Aboriginal and Torres Strait Islander identification rate differs between the Census and interviewer administered surveys).
- It is not known if the data collection instruments are culturally appropriate for all special needs groups; nor is it known how this, combined with different data collection methods, impacts on the accuracy of the estimated potential population
- There are a number of potential sources of error related to the Census that stem from failure to return a Census form or failure to answer every applicable question. 2011 Census data used in calculating the potential population exclude people for whom data is not stated. As with any collection, should the characteristics of interest (for example, ASSNP and/or special needs group status) of the people excluded differ from those people included, a potential for bias is introduced. In particular, for Aboriginal and Torres Strait Islander estimates, differential undercount of Aboriginal and Torres Strait Islander people across states and territories may introduce bias into the results that would affect the comparability of estimates across jurisdictions, if those missed by the Census had a different rate of disability status to those included.

Definitions of key terms 14.6

service users receiving community accommodation and care services

Accommodation support People using the following NDA accommodation support services: group homes; attendant care/personal care; in-home accommodation support; alternative family placement and other accommodation support (types 1.04-1.08), as a proportion of all people using NDA accommodation support services (excludes service users of specialist psychiatric disability services only). See Australian Institute of Health and Welfare (AIHW) (2015b) for more information on service types 1.04-1.08.

Administration expenditure as a proportion of total expenditure

The numerator — expenditure (accrual) by jurisdictions on administering the disability service system as a whole. Including the regional program management and administration, the central policy and program management and administration, and the disability program share of corporate administration costs under the umbrella department. Excluding administration expenditure on a service that has been already counted in the direct expenditure on the service - divided by the denominator — total government expenditure on services for people with disability. Including expenditure on both programs and administration, direct expenditure and grants to government service providers, and government grants to non-government service providers (except major capital grants).

Comparability

Data are considered comparable if (subject to caveats) they can be used to inform an assessment of comparative performance. Typically, data are considered comparable when they are collected in the same way and in accordance with the same definitions. For comparable indicators or measures, significant differences in reported results allow an assessment of differences in performance, rather than being the result of anomalies in the data.

Completeness

Data are considered complete if all required data are available for all iurisdictions that provide the service.

2012 ABS SDAC

Core activities as per the Communication, mobility and self-care

Cost per user of government provided accommodation support services — group homes

The numerator — government expenditure (accrual) on government provided accommodation support services in group homes (as defined by DS NMDS service type 1.04) — divided by the denominator — the number of users of government provided accommodation support services in group homes.

Cost per user of government provided accommodation support services institutional/residential settings

The numerator — government expenditure (accrual) on government provided accommodation support services in institutional/residential settings (as defined by DS NMDS service types 1.01, 1.02 and 1.03) — divided by the denominator the number of users of accommodation support services in institutional/residential settings. See AIHW (2015b) for more information on service types 1.01–1.03.

Disability

The United Nation's Convention on the Rights of Persons with Disabilities, ratified by Australia on 17 July 2008, defines 'persons with disabilities' as those who have long-term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.

The World Health Organisation defines 'disabilities' as impairments, activity limitations, and participation restrictions: an impairment is a problem in body function or structure; an activity limitation is a difficulty encountered by an individual in executing a task or action; and a participation restriction is a problem experienced by an individual in involvement in life situations. Disability is a complex phenomenon, reflecting an interaction between features of a person's body and features of the society in which he or she lives (WHO 2 009).

In the ABS SDAC 2012, a person has a disability if they 'report they have a limitation, restriction or impairment, which has lasted, or is likely to last, for at least six months and restricts everyday activities. This includes:

- loss of sight (not corrected by glasses or contact lenses)
- loss of hearing where communication is restricted, or an aid to assist with, or substitute for, hearing is used
- · speech difficulties

- shortness of breath or breathing difficulties causing restriction
- · chronic or recurrent pain or discomfort causing restriction
- · blackouts, seizures, or loss of consciousness
- · difficulty learning or understanding
- · incomplete use of arms or fingers
- difficulty gripping or holding things
- · incomplete use of feet or legs
- nervous or emotional condition causing restriction
- restriction in physical activities or in doing physical work
- · disfigurement or deformity
- mental illness or condition requiring help or supervision
- long-term effects of head injury, stroke or other brain damage causing restriction
- receiving treatment or medication for any other long-term conditions or ailments and still being restricted
- any other long-term conditions resulting in a restriction.

The third CSTDA (2003, p. 9) defined 'people with disabilities' as those whose disability manifests itself before the age of 65 years and for which they require significant ongoing and/or long-term episodic support. For these people, the disability will be attributable to an intellectual, psychiatric, sensory, physical or neurological impairment or acquired brain injury (or some combination of these) which is likely to be permanent and results in substantially reduced capacity in at least one of the following: self-care/management, mobility and communication.

Employment services

Employment services comprise open employment services and supported employment services. Where users of employment services are described without further qualification, this includes people who use either or both open and supported employment services.

All open employment services are now included in the Disability Employment Services (DES) program administered by the Department of Social Services (DSS). Disability Employment Services has two parts: Disability Management Service is for job seekers with disability, injury or health condition who need assistance to find a job and occasional support to keep a job; and Employment Support Service provides assistance to people with permanent disability and who need regular, ongoing support to keep a job. Supported employment services are administered by DSS (formerly FaHCSIA) under the Disability Employment Assistance activity as Australian Disability Enterprises. Australian Disability Enterprises are commercial businesses that provide employment for people with disability in a supportive environment.

Employment rate for people with a profound or severe core activity limitation

Total estimated number of people aged 15–64 years with a profound or severe core activity limitation who are employed, divided by the total estimated number of people aged 15–64 years with a profound or severe core activity limitation in the labour force, multiplied by 100.

Employment rate for total population

Total estimated number of people aged 15–64 years who are employed, divided by the total number of people aged 15–64 years in the labour force, multiplied by 100.

Funded agency

An organisation that delivers one or more NDA service types (service type outlets). Funded agencies are usually legal entities. They are generally responsible for providing DS NMDS data to jurisdictions. Where a funded agency operates only one service type outlet, the service type outlet and the funded agency are the same entity.

Geographic location

Geographic location is based on the Australian Statistical Geography Standard of Remoteness Areas, which categorises areas as 'major cities', 'inner regional', 'outer regional', 'remote', 'very remote' and 'migratory'. The criteria for Remoteness Areas are based on the Accessibility/Remoteness Index of Australia, which measures the remoteness of a point based on the physical road distance to the nearest urban centre in each of five size classes (ABS 2011b). The 'outer regional and remote/very remote' classification used in this Report

was derived by adding outer regional, remote and very remote data.

Government contribution per user of non-government provided employment services

The numerator — Australian Government grant and case based funding expenditure (accrual) on specialist disability employment services (as defined by DS NMDS service types 5.01 (open) and 5.02 (supported)) — divided by the denominator — number of service users who received assistance. (For data prior to 2005-06, service type 5.03 (combined open and supported) is also included.) See AIHW (2015b) for more information on service types 5.01-5.03.

Government contribution per user of non-government provided services accommodation support in group homes

The numerator — government expenditure (accrual) on non-government provided accommodation support services in group homes (as defined by DS NMDS service type 1.04) — divided by the denominator — the number of users of non-government provided accommodation support services in group homes.

Government contribution per user of non-government provided services institutional/residential settings

The numerator — government expenditure (accrual) on non-government provided accommodation support services in institutional/residential settings (as defined by DS NMDS service types 1.01, 1.02 and 1.03) — divided by the denominator — the number of users of non-government provided accommodation support accommodation support services in institutional/residential settings.

Government contribution per user of non-government provided services in other community settings

The numerator — government expenditure (accrual) on non-government provided accommodation support services in other community settings (as defined by DS **NMDS** service types 1.05-1.08) — divided by the denominator — the number of users of accommodation support non-government provided accommodation support services in other community settings.

Aboriginal and Torres Strait Islander factor

The potential populations were estimated by applying the 2012 national age- and sex- specific rates of the potential population to the age and sex structure of each jurisdiction in the current year. As Aboriginal and Torres Strait Islander people have significantly higher disability prevalence rates and greater representation in some NDA specialist disability services than non-Indigenous people, and there are differences in the share of different jurisdictions' populations who are Aboriginal and Torres Strait Islander, a further Aboriginal and Torres Strait Islander factor adjustment was undertaken. The Aboriginal and Torres Strait Islander factor was multiplied by the 'expected current population estimate' of people in the potential population in each jurisdiction to derive the 'potential population'.

The following steps were undertaken to estimate the Aboriginal and Torres Strait Islander factors:

- Data for all people (weighted) were calculated by multiplying the data for Aboriginal and Torres Strait Islander people by 2.4 and adding the data for non-Indigenous people. Hence Aboriginal and Torres Strait Islander people are weighted at 2.4 and non-Indigenous people at one
- Data for all people (weighted per person) were calculated by dividing the all people (weighted) data by the sum of the Aboriginal and Torres Strait Islander people data and the non-Indigenous people data
- The Aboriginal and Torres Strait Islander factors were then calculated by multiplying the all people (weighted per person) data by 100 and dividing by the all people (weighted per person) total for Australia.

Informal carer

ABS informal carer: A person of any age who provides any informal assistance, in terms of help or supervision, to people with disabilities or long-term conditions, or older people (that is, aged 65 years and over). This assistance has to be ongoing, or likely to be ongoing, for at least 6 months. Assistance to a person in a different household relates to 'everyday types of activities', without specific information on the activities. Where the care recipient lives in the same household, the assistance is for one or more of the following activities: cognition or emotion, communication, health care, housework, meal preparation, mobility,

paperwork, property maintenance, self-care and transport (ABS 2011a).

DS NMDS informal carer: an informal carer is a person such as a family member, friend or neighbour who provides regular and sustained care and assistance to the person requiring support (AIHW 2012). This includes people who may receive a pension or benefit associated with their caring role, but does not include people, either paid or voluntary, whose services are arranged by a formal service organisation. Informal carers can be defined as primary if they help with one or more of the activities of daily living: self-care, mobility or communication.

See also primary carer.

Labour force participation rate for people with a profound or severe core activity limitation

The total number of people with a profound or severe core activity limitation in the labour force (where the labour force includes employed and unemployed people), divided by the total number of people with a profound or severe core activity limitation who are aged 15-64 years, multiplied by 100.

An employed person is a person who, in his or her main job during the remuneration period (reference week):

- · worked one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (including employees, employers and self-employed people)
- · worked one hour or more without pay in a family business, or on a farm (excluding people undertaking other unpaid voluntary work), or
- was an employer, employee or self-employed person or unpaid family helper who had a job, business or farm, but was not at work.

An unemployed person is a person aged 15-64 years who was not employed during the remuneration period, but was looking for work.

Labour force participation rate for the total population

Total number of people aged 15-64 years in the labour force (where the labour force includes both employed and unemployed people) divided by the total number of people aged 15-64 years, multiplied by 100.

Mild core activity limitation

The person needs no help and has no difficulty with any of the core activity tasks, but:

- · uses aids or equipment, or has one or more of the following limitations
- cannot easily walk 200 metres
- · cannot walk up and down stairs without a handrail
- cannot easily bend to pick up an object from the floor
- · cannot use public transport
- can use public transport, but needs help or supervision
- · needs no help or supervision, but has difficulty using public transport. (as per the 2012 SDAC).

Moderate core activity limitation

The person needs no help, but has difficulty with a core activity task (as per the 2012 SDAC).

Non-English speaking country of birth

People with a country of birth other than Australia and classified in English proficiency groups 2, 3 or 4 (DIMA 1999, 2003). For 2003-04 and 2004-05 data these countries include countries other than New Zealand, Canada, the United Kingdom, South Africa, Ireland and the United States. For 2005-06 onwards, data include Zimbabwe as an English-speaking country.

Payroll tax

A tax levied on employers based on the value of wages and certain supplements paid or payable to, or on behalf of, their employees (SCRCSSP 1999). Payroll tax arrangements for government funded and delivered services differ across jurisdictions. Differences in the treatment of payroll tax can affect the comparability of unit costs across jurisdictions and services. These differences include payroll tax exemptions, marginal tax rates, tax-free thresholds and clawback arrangements (see SCRCSSP 1999).

There are two forms of payroll tax reported:

- actual payroll tax actually paid by non-exempt services
- imputed a hypothetical payroll tax amount estimated for exempt services. A jurisdiction's estimate is based on the cost of salaries and salary related

expenses, the payroll tax threshold and the tax rate.

Potential population

Potential population estimates are used as the denominators for the performance measures reported under the indicator 'access to NDA specialist disability services'.

The 'potential population' is the number of people with the potential to require disability support services, including individuals who meet the service eligibility criteria but who do not demand the services.

The potential population is the number of people aged 0–64 years who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities. For respite services, only those people with a primary carer were included. For supported employment services, only the potential population aged 15–64 years participating in the labour force are included. For open employment services, the potential population is not used; instead, an estimate of all people with a disability and an employment restriction aged 15–64 is used. Where combined employment services denominators or rates are presented, the supported employment potential population is used.

The relatively high standard errors in the prevalence rates for smaller jurisdictions, as well as the need to adjust for the Aboriginal and Torres Strait Islander population necessitated the preparation of special estimates of the 'potential population' for specialist disability services.

Briefly, the potential population was estimated by applying the national age- and sex-specific distribution of the potential population identified in the 2012 SDAC to the age and sex structure of each jurisdiction in the current year, to give an 'expected current estimate' of the potential population in that jurisdiction. These estimates were adjusted by the Aboriginal and Torres Strait Islander factor to account for differences in the proportion of jurisdictions' populations who are Aboriginal and Torres Strait Islander. Aboriginal and Torres Strait Islander people have been given a weighting of 2.4 in these estimates, in recognition of their greater prevalence rates of disability and their relatively greater representation in NDA specialist disability services (AIHW 2006).

The potential populations for 2004-05 to 2006-07 were calculated using national age- and sex-specific rates of severe or profound core activity limitation from the ABS Survey of Disability, Ageing and Carers (SDAC) conducted in 2003. In 2011, the 2009 SDAC was released, and recalculation of the potential population has resulted in a break in series between the 2003 and 2009 surveys. In 2014, the 2012 SDAC was released, and recalculation of the potential population has resulted in a break in series between the 2009 and 2012 surveys.

Data measuring the potential population is not available for each reported year and so has been estimated from several sources based on the following assumptions:

- (a) for the purposes of calculation, it is assumed that age-sex specific proportions of the potential population changed smoothly from 2009 to 2012.
- (b) the assumption that national age-sex specific proportions of the potential population from SDAC 2009 and SDAC 2012 apply consistently across states/territories is untested.

Primary carer

ABS SDAC primary carer. A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities, with one or more of the core activities of mobility, self-care or communication. In this survey, primary carers only include people aged 15 years and over. People aged 15 to 17 years were only interviewed personally if parental permission was granted (ABS http://www.abs.gov.au/AUSSTATS/abs@.nsf/Latestproducts/4430.0Glossary60 2012?opendocument&tabname=Notes&prodno=4430.0&issue=2012&num=&vie w=).

DS NMDS primary carer: an informal carer who assists the person requiring support, in one or more of the following ADL: self-care, mobility or communication.

See also informal carer.

Primary disability group

Disability group that most clearly expresses the experience of disability by a person. The primary disability group can also be considered as the disability group causing the most difficulty to the person (overall difficulty in daily life, not just within the context of the support offered by a particular service).

Profound core activity limitation

The person is unable to do or always needs help with, a core activity task. (as per the 2012 SDAC).

Real expenditure

Actual expenditure (accrual) adjusted for changes in prices, using the Gross Domestic P(E) price deflator, and expressed in terms of current year dollars.

Schooling or employment restriction

Schooling restriction: as a result of disability, being unable to attend school; having to attend a special school; having to attend special classes at an ordinary school; needing at least one day a week off school on average; and/or having difficulty at school.

Employment restriction: as a result of disability, being permanently unable to work; being restricted in the type of work they can do; needing at least one day a week off work on average; being restricted in the number of hours they can work; requiring an employer to provide special equipment, modify the work environment or make special arrangements; needing to be given ongoing assistance or supervision; and/or finding it difficult to change jobs or to get a preferred job.

Service

A service is a support activity provided to a service user, in accord with the NDA. Services within the scope of the collection are those for which funding has been provided during the specified period by a government organisation operating under the NDA.

Service type

The support activity that the service type outlet has been funded to provide under the NDA. The DS NMDS classifies services according to 'service type'. The service type classification groups services into seven categories: accommodation support; community support; community access; respite; employment; advocacy, information and alternative forms of communication; and other support services. Each of these categories has subcategories.

Service type outlet

A service type outlet is the unit of the funded agency that delivers a particular NDA service type at or from a discrete location. If a funded agency provides, for example, both accommodation support and respite services, it is counted as two service type outlets. Similarly, if an agency is funded to provide more than one accommodation support service type (for example, group homes and attendant care), then it is providing (and is usually separately funded for) two different service types — that is, there are two service type outlets for the funded agency.

Service user

A service user is a person with disability who receives a NDA specialist disability service. A service user may receive more than one service over a period of time or on a single day.

Service users with different levels of need for assistance with ADL

Data on service users with different levels of need for assistance with ADL are derived using information on the level of support needed in one or more of the core support areas: self-care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL reported needing no support in all the core activity support areas.

Severe core activity limitation

The person sometimes needs help with a core activity task, and/or has difficulty understanding or being understood by family or friends, or can communicate more easily using sign language or other non-spoken forms of communication. (as per the SDAC 2012).

Users of NDA accommodation support services

People using one or more accommodation support services that correspond to the following DS NMDS service types: 1.01 large residentials/institutions (more than 20 places); 1.02 small residentials/institutions (7–20 places); 1.03 hostels; 1.04 group homes (usually less than seven places); 1.05 attendant care/personal care; 1.06 in-home accommodation support; 1.07 alternative family placement; and 1.08 other accommodation support.

Users of NDA community access services

People using one or more services that correspond to the following DS NMDS service types: 3.01 learning and life skills development; 3.02 recreation/holiday programs; and 3.03 other community access. See AIHW (2014a) for more information on service types 3.01–3.03.

Users of NDA community support services

People using one or more services that correspond to the following DS NMDS service types: 2.01 therapy support for individuals; 2.02 early childhood intervention; 2.03 behaviour/specialist intervention; 2.04 counselling; 2.05 regional resource and support teams; 2.06 case management, local coordination and development; and 2.07 other community support. See AIHW (2014a) for more information on service types 2.01–2.07.

Users of NDA employment services

People using one or more services that correspond to the following DS NMDS service types: 5.01 open employment and 5.02 supported employment. (For data prior to 2005-06, people using service type 5.03 [combined open and supported] are also included.)

Users of NDA respite services

People using one or more services that correspond to the following DS NMDS service types: 4.01 own home respite; 4.02 centre-based respite/respite homes; 4.03 host family respite/peer support respite; 4.04 flexible/combination respite; and 4.05 other respite. See AIHW (2014a) for more information on service types 4.01–4.05.

14.7 List of attachment tables

Attachment tables are identified in references throughout this chapter by a '14A' prefix (for example, table 14A.1). Attachment tables are available on the Review website (www.pc.gov.au/rogs/2016).

14.84 REPORT ON GOVERNMENT SERVICES 2016

14A Services for people with disability—attachment

Definitions for the descriptors in this attachment are in section 14.7 of the chapter. Unsourced information was obtained from the Australian, State and Territory governments.

Data in this chapter are examined by the Disability Services Working Group, but have not been formally audited by the Secretariat.

Data reported in the attachment tables are the most accurate available at the time of data collection. Historical data may have been updated since the last edition of RoGS.

This file is available in Adobe PDF format on the Review web page (www.pc.gov.au/rogs/2016).

⁽a) Pensions, allowances and payments are not funded under the CSTDA/NDA. Australian totals may not sum as a result of rounding.

Table 14A.1 Recipients of Disability Support Pension, Mobility Allowance, Carer Payment, Carer Allowance, Sickness Allowance, Child Disability Assistance Payment and Carer Supplement ('000) (a)

NSW Vic Qld WA SA Tas ACT NT Other Aust

- (b) The Disability Support Pension is a means tested income support payment for people aged 16 or over who have a physical, intellectual or psychiatric impairment (meeting set criteria) resulting in an inability to work or to be re-skilled for work for at least the next two years (as a result of impairment), or who are participating in the supported wage system. Special rules apply to the vision impaired.
- (c) The Mobility Allowance is a non-means tested income supplement to assist with transport costs for people aged 16 or over with a disability who are in employment, vocational training, a combination of vocational training and employment, job search activities or voluntary work, and who are unable to use public transport without substantial assistance.
- (d) The Carer Payment provides income support to people who, as a result of the demands of their caring role, are unable to support themselves through substantial workforce participation.
- (e) The Carer Allowance is a supplementary payment available to people who provide daily care and attention at home for an adult or a child with a disability or severe medical condition. Data include Health Care Card only recipients.
- (f) Sickness Allowance is a means tested income support payment for people aged 21 or over who are temporarily incapacitated from doing their normal work or study, due to illness or injury, and have a job or study to return to when they are fit.
- (g) The Child Disability Assistance Payment is an annual payment made for a child with disability under 16 years who attracts a payment of Carer Allowance for their carer. The payment can be used to assist families purchase support, aids, therapies, or respite that they require for their child with disability.
- (h) An annual supplement to Carer Payment recipients and to Carer Allowance recipients for each person to which they provide care.
- (i) No carer supplements were paid for the year ended 30 June 2010.
 - Nil or rounded to zero.

Table 14A.2 Users of NDA services, existence of an informal/primary carer, by remoteness (a), (b), (c)

Not stated/
Unit Major cities Inner regional Outer regional Remote Very remote collected Total (d)

- (a) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status. A number of records for 'whether had an informal carer' for 2011-12 and marked 'did not have an informal carer' were actually 'not stated'. These data have been revised. This revision has affected the numbers of primary carers and the level of response for this item in 2012-13.
- (b) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) Total includes data for service users whose location was not collected/identified.
- (d) Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.

- (a) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status. Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.
- (b) A number of records for 'whether had an informal carer' for 2011-12 and marked 'did not have an informal carer' were actually 'not stated'. These data have been revised. This revision has affected the numbers of primary carers and the level of response for this item in 2012-13.
- (c) Total includes data for service users whose location was not collected/identified.
- (d) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
 - Nil or rounded to zero

Source: AIHW (unpublished), DS NMDS 2011-12 to 2013-14.

- (a) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status. Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.
- (b) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.
- (d) Total includes data for service users whose location was not collected/identified.
 - Nil or rounded to zero. **np** Not published.

⁽a) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status. Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.

	(b), (c)

Qld

Vic

(b) Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

(c) Total includes data for service users whose location was not collected/identified.

NSW

- (d) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
 - Nil or rounded to zero.

- (a) In NSW, administrative expenditure for 2005-05 to 2008-09 have been revised to exclude capital grants to non-government service providers, as this expenditure is now reported separately. Data for 2008-09 to 2014-15 exclude payroll tax. The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure, which consolidated corporate services of several Government Divisions. NSW provided funding via a transfer of \$131 million (2011-12) \$130 million (2012-13) and \$143 million (2013-14) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies. The increased spending in 'Other support' for 2014-15 is a result of increased Grants funding to the Ability Links program in 2014-15.
- (b) In Victoria, administrative expenditure for 2013-14 relates to activity based expenditure inclusive of Direct Management (Output Management) as part of a Departmental restructure.
- (c) In Queensland, direct service delivery expenditure and administrative expenditure data exclude payroll tax for all years. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services.
- (d) The decrease in WA administrative expenditure in 2007-08 mainly reflects the abolition of the capital user charge by Department of Treasury and Finance. The increase in WA administrative expenditure in 2009-10 consists mainly of one off (non capital) projects.

Table 14A.6 Government expenditure, by type (\$'000)

NSW (a) Vic (b) Qld (c) WA (d) SA (e) Tas (f) ACT (g) NT (h) S/T (i) Aus Gov Aust

- (e) For SA, for 2007-08, expenditure includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure in SA includes expenditure on equipment services for all years. From 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only.
- (f) For Tasmania, 2007-08 expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes. In Tasmania, capital grants to non-government service providers include transfer payments to Housing Tasmania for development of disability specific accommodation. In 2009-10, a reduction in administrative expenditure was due to improved processes for aligning administrative and direct service delivery expenditure. From 2012-13 to 2014-15, administrative expenditure varied due to changes in methodology for allocation of corporate and divisional overheads.
- (g) In the ACT in 2006-07, administrative expenditure was impacted by the centralisation of some administrative services.
- (h) In the NT, a new standardised formula was introduced in 2005-06 to calculate corporate overheads, this has led to variation in relation to previous years.
- Total of states and territories.
- (j) Includes actual payroll tax for the NT. Actual payroll tax, for NSW is included for 2005-06–2007-08, for Victoria is included in part, for 2005-06 to 2007-08 and then in full from 2008-09 to 2012-13, for SA in part for 2006-07 and then in full for 2007-08 to 2012-13, for Tasmania from 2005-06 to 2011-12 and in part for 2012-13, for Queensland from 2005-06 to 2013-14.
- (k) From 2013-14, data for NSW, Victoria, SA and Tasmania and from 2014-15 data for NT, WA and the ACT are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, SA and Tasmania, total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, NT, and the ACT total government expenditure includes both 'cash' and 'in-kind' funding to the NDIS. The NT total government expenditure for 2014-15 includes cash funding of \$2.0 million to the NDIA. Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. For SA, cash contributions to the NDIA for 2013-14 were \$2.6 million. For SA in 2013-14, expenditure reduced by revenue received from NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000).
- (I) Time series financial data are adjusted to 2014-15 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2014-15= 100) (table 14A.152). See table 2A.48 and chapter 2 (sections 2.5-6) for more information.

- (a) Time series financial data are adjusted to 2014-15 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2014-15= 100) (table 14A.152). See table 2A.48 and chapter 2 (sections 2.5-6) for more information.
- (b) In NSW, expenditure data in 2004-05, may differ from data reported elsewhere as they exclude one-off non-cash expenditures such as bad debts and gain or loss on sale of assets. NSW provided funding via a transfer of \$131 million (2011-12), \$130 million (2012-13) and \$143 million (2013-14) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies. The increased spending in 'Other support' for 2014-15 is a result of increased Grants funding to the Ability Links program in 2014-15. Data for 2008-09 to 2014-15 exclude payroll tax.
- (c) For Victoria, 2005-06 data, transfer payments from the Australian Government include funding for the Disability Advisory Council. For 2006-07, transfer payments from the Australian Government exclude funding for the Disability Advisory Council.
- (d) Queensland transfer payments data for 2005-06 exclude \$3 788 582 targeted for the ageing carers respite initiative. These funds were excluded even though they were provided by the Australian Government in 2005-06. These funds are included in the data for 2006-07. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services.
- (e) WA transfer payments data include Australian Government funding for specific projects in addition to core-CSTDA funding. A cash accounting method to record transfer payments has been used in 2009-10.
- (f) SA transfer payments for 2005-06 include Aged Carer Bilateral Funds of \$3 million. From 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only. For 2007-08, expenditure includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure in SA includes expenditure on equipment services for all years. For 2013-14, Excludes portion of Commonwealth funding relating to the NDIS trial (\$333 000). From 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only.
- (g) For Tasmania, 2007-08 expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes.
- (h) Total of states and territories.

Table 14A.7 Total real government expenditure, by source of funding (2014-15 dollars) (\$'000) (a)

NSW (b) Vic (c) Qld (d) WA (e) SA (f) Tas (g) ACT NT S/T (h) Aus Gov Aust

- (i) Transfer payments data are provided by State and Territory governments.
- (j) From 2013-14, data for NSW, Victoria, SA and Tasmania and from 2014-15 data for NT, WA and the ACT are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, SA and Tasmania, total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, NT, and the ACT total government expenditure includes both 'cash' and 'in-kind' funding to the NDIS. The NT total government expenditure for 2014-15 includes cash funding of \$2.0 million to the NDIA. Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. For SA, cash contributions to the NDIA for 2013-14 were \$2.6 million. For SA in 2013-14, expenditure reduced by revenue received from the NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000).
- (k) Includes actual payroll tax for the NT. Actual payroll tax, for NSW is included for 2005-06–2007-08, for Victoria is included in part, for 2005-06 to 2007-08 and then in full from 2008-09 to 2012-13, for SA in part for 2006-07 and then in full for 2007-08 to 2012-13, for Tasmania from 2005-06 to 2011-12 and in part for 2012-13, for Queensland from 2005-06 to 2013-14.

Table 14A.9 Real government direct service delivery and total expenditure adjusted for payroll tax (2014-15 dollars) (\$'000) (a)

NSW (b) Vic (c) Qld (d) WA (e) SA (f) Tas (g) ACT NT (h) S/T (i) Aus Gov Aust

- (a) Time series financial data are adjusted to 2014-15 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2014-15= 100) (table 14A.152). See table 2A.48 and chapter 2 (sections 2.5-6) for more information.
- (b) The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure, which consolidated corporate services of several Government Divisions. NSW provided funding via a transfer of \$131 million (2011-12) and \$130 million (2012-13) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies.
- (c) The increase in actual payroll tax in Victoria is a result of government delivered services no longer being exempt from the tax. Administrative expenditure for 2013-14 relates to activity based expenditure inclusive of Direct Management (Output Management) as part of a Departmental restructure. Payroll tax relates to internally delivered services only.
- (d) Payroll tax data for Queensland include paid payroll tax and accrued payroll tax. Direct service delivery expenditure and administrative expenditure data exclude payroll tax. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services.
- (e) The decrease in WA administrative expenditure in 2007-08 mainly reflects the abolition of the capital user charge by Department of Treasury and Finance. The increase in WA administrative expenditure in 2009-10 consists mainly of one off (non capital) projects.
- (f) In SA for 2007-08 expenditure includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure in SA includes expenditure on equipment services for all years.
- (g) For Tasmania, 2007-08 expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes. In Tasmania, capital grants to non-government service providers include transfer payments to Housing Tasmania for development of disability specific accommodation. From 2012-13 to 2014-15, administrative expenditure varied due to changes in methodology for allocation of corporate and divisional overheads.
- (h) From 2005-06, the NT payroll tax data are calculated using a new standardised formula.
- (i) Total of states and territories.
- (j) Includes actual payroll tax for the NT. Actual payroll tax, for NSW is included for 2005-06–2007-08, for Victoria is included in part, for 2005-06 to 2007-08 and then in full from 2008-09 to 2012-13, for SA in part for 2006-07 and then in full for 2007-08 to 2012-13, for Tasmania from 2005-06 to 2011-12 and in part for 2012-13, for Queensland from 2005-06 to 2013-14.

REPORT ON GOVERNMENT SERVICES 2016 SERVICES FOR PEOPLE WITH DISABILITY PAGE 6 of TABLE 14A.9

⁽k) From 2013-14, data for NSW, Victoria, SA and Tasmania and from 2014-15 data for NT, WA and the ACT are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, SA and Tasmania, total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, NT and the ACT, total government expenditure includes both 'cash' and 'in-kind' funding to the NDIS. The NT total government expenditure for 2014-15 includes cash funding of \$2.0 million to the NDIA. Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. For SA, cash contributions to the NDIA for 2013-14 were \$2.6 million. For SA in 2013-14, expenditure reduced by revenue received from the NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000).

- (a) Time series financial data are adjusted to 2014-15 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2014-15= 100) (table 14A.152). See table 2A.48 and chapter 2 (sections 2.5-6) for more information.
- (b) For NSW, 2008-09 to 2014-15 data exclude payroll tax. NSW provided funding via a transfer of \$131 million (2011-12) and \$130 million (2012-13) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies.
- (c) For Victoria, 2005-06 data, service expenditure on respite services includes funding provided under the State/Commonwealth Bilateral Agreement. Expenditure on accommodation support, community support, community access and respite include expenditure on refurbishments, service reconfiguration and other service and client related costs. Data for 2008-09, 2009-10 and 2011-12 exclude payroll tax. Data for accommodation support services in 2008-09 excludes former Homefirst (personal/attendance care) program and Infrastructure development and enhancement grants for non-government services. Data for community support in 2008-09 includes former Homefirst (personal/attendance care) and Community Options programs now delivered through Individual Support Packages. Data for community access services in 2008-09 excludes former Community Options program (ongoing community access support and activities). In 2012-13, the reduction in expenditure dollars in Community Access was offset equally by a corresponding increase in Community Support. This was due to an output structure realignment, whereby Day Programs was amalgamated under Individualised Support Packages from 2012-13 onwards.
- (d) For Queensland, a review of 2010-11 cost centre allocations has improved the accuracy of expenditure for accommodation support, community support, community access and respite services. Direct service delivery expenditure data exclude payroll tax for all years reported. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services.

Table 14A.10 Real government direct service delivery expenditure, by service type (2014-15 dollars) (\$'000) (a)

NSW (b) Vic (c) QId (d) WA (e) SA (f) Tas (g) ACT (h) NT (i) S/T (j) Aus Gov Aust (e) For WA 2005-06 and 2006-07 data advocacy information and print disability expenditure includes one-off grants to NGA's for strategic plans and access

- (e) For WA, 2005-06 and 2006-07 data, advocacy, information and print disability expenditure includes one-off grants to NGA's for strategic plans and access initiatives. 2008-09 includes a transfer payment to the Dept of Housing of \$13.8M. Services in WA are not subject to payroll tax. In 2013-14, the increase in accommodation support expenditure and decrease in respite services expenditure reflects the transfer of approximately 500 service users, previously captured against respite transferred to accommodation as a result of the WA Procurement Reforms that commenced mid-year 2013-14.
- (f) For SA, from 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only. For 2007-08, expenditure on 'other support' includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure on other support in SA includes expenditure on equipment services for all years.
- (g) For Tasmania, direct service expenditure includes payroll tax until 2011-12 and partial for 2012-13. For 2007-08, accommodation support expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes.
- (h) Services in the ACT are not subject to payroll tax. 2014-15 data include \$109,164 in government expenditure through Enhanced Services Offer for 15 clients.
- (i) In the NT, the decrease in expenditure on advocacy, information and print disability in 2007-08 is due to the reclassification of a service. Direct service expenditure includes payroll tax.
- (j) Total of states and territories.
- (k) Other support services includes advocacy, information and print disability.
- (I) Includes actual payroll tax for the NT. Actual payroll tax, for NSW is included for 2005-06–2007-08, for Victoria is included in part, for 2005-06 to 2007-08 and then in full from 2008-09 to 2012-13, for SA in part for 2006-07 and then in full for 2007-08 to 2012-13, for Tasmania from 2005-06 to 2011-12 and in part for 2012-13, for Queensland from 2005-06 to 2013-14.
- (m) From 2013-14, data for NSW, Victoria, SA and Tasmania and from 2014-15 data for NT, WA and the ACT are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, SA and Tasmania, total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, NT and the ACT, total government expenditure includes both 'cash' and 'in-kind' funding to the NDIS. The NT total government expenditure for 2014-15 includes cash funding of \$2.0 million to the NDIA. Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. For SA, cash contributions to the NDIA for 2013-14 were \$2.6 million. For SA in 2013-14, expenditure reduced by revenue received from the NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000).

A '*' indicates a relative standard error (RSE) of between 25 per cent and 50 per cent.

np Not published.

Source: Australian Bureau of Statistics (unpublished and TableBuilder), Survey of Disability, Ageing and Carers (SDAC), 2003, 2009 and 2012, Cat. no. 4430.0.

⁽a) Core activities comprise communication, mobility and self care.

⁽b) Data are age standardised.

⁽c) For the ABS Survey of Disability, Ageing and Carers 2003 the sample in the NT was reduced to a level such that NT records contributed appropriately to national estimates but could not support reliable estimates for the NT. As a result, estimates for the NT are not published separately by the ABS.

Table 14A.15 Users of NDA government and non-government provided services, by service type (a), (b), (c), (d)

Unit NSW (e) Vic Qld WA (f) SA (g) Tas ACT (h) NT Aust

- (a) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (b) Numbers for all State and Territory government-administered services, and all services, may not equal the sum of numbers of each service type, as some users accessed more than one service type.
- (c) Numbers for total government/non-government services may not equal the sum of government services and non-government services as some users accessed government and non-government services.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) NSW data has had lower-than-average response rates, which has led to under reporting of service user numbers compared to other jurisdictions. Government and non-government sectors have not been accurately recorded in the NSW DS NMDS up to 2009-10. Some non-government providers have been coded as government and this will affect the comparability of the number of service users from government and non-government sectors over time.
- (f) WA community access and respite data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06.
- (g) South Australia State/Territory services sector data have been revised for 2012-13, updating the figures published in AIHW 2014 (table B14 of that report). SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (h) For the ACT, the decreased community support service user count for 2005-06 was due to the data collection for therapy services being incomplete, resulting in therapy service user numbers falling from 2316 users in 2004-05 to 1807 in 2005-06.
- (i) See section 14.7 for detailed information on the estimated potential population.
- (j) Australian Government administered services classified as 'government' are not provided by the Australian Government, but by organisations classified as government related, such as local councils.
- (k) Data for 2012-13 do not include a number of 'not stated' sector records (nationally, 52 426 non-government Open employment records) and are not comparable to previous years.
 - Nil or rounded to zero.

REPORT ON GOVERNMENT SERVICES 2016 SERVICES FOR PEOPLE WITH DISABILITY PAGE **7** of TABLE 14A.16 **Table 14A.16**

Users of NDA services, by primary disability group (a), (b), (c), (d)

	Unit	NSW	Vic	Qld	WA	SA (e)	Tas	ACT	NT	Aus Gov	Aust
Total	%	100	100	100	100	100	100	100	100	100	100
Total number	no.	54 053	60 559	26 749	18 092	19 372	6 455	5 723	2 626	132 169	308 120

- (a) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory
- (b) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (d) 'Not reported' primary disability includes both service users accessing only recreation and holiday program services (for whom primary disability data were not collected) and other service users without a reported response.
 - Nil or rounded to zero.

Source: AIHW (unpublished), DS NMDS 2009-10 to 2013-14; CSTDA NMDS 2004-05 to 2008-09.

- (a) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (b) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) Service users may be in more than one disability group so the sum of proportions for each jurisdiction can be greater than 100 per cent.
- (d) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
 - Nil or rounded to zero.

Source: AIHW (unpublished), DS NMDS 2009-10 to 2013-14; CSTDA NMDS 2004-05to 2008-09.

							_			

⁽a) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory

⁽b) See section 14.7 for detailed information on the estimated potential population.

⁽c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

⁽d) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.

Table 14A.19 Users of NDA accommodation support services (aged 0-64 years), as a proportion of the potential population for accommodation support services (a), (b), (c)

Unit NSW (d) Vic Qld WA SA (e) Tas ACT (f) NT Aust

- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (f) In 2006-07, Disability ACT better aligned the funded service types with the NMDS Classifications. This realignment better reflects the costs of expenditure on accommodation support in the ACT nongovernment sector.
- (g) The definition of the potential population was revised in 2012, effective from 2008-09. See section 14.7.

⁽a) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.

⁽b) See section 14.7 for detailed information on the estimated potential population.

⁽c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

⁽d) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.

Table 14A.20 Users of NDA community support services (aged 0-64 years), as a proportion of the potential population for community support services (a), (b), (c)

Unit NSW (d) Vic (e) Qld WA (f) SA (g) Tas ACT (h) NT Aust

- (e) For Victoria, additional agencies reporting clients and the change of data capturing for the Individualised Support Packages under the community support category resulted in an increase in the count of service users in 2008 09.
- (f) The increase in the number of WA service users in 2004-05 is due to the inclusion of data from a new electronic database for the first time.
- (g) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (h) For the ACT, improved data capture for therapy services resulted in an increased service user count between 2003-04 and 2004-05. The decreased community support service user count for 2005-06 was due to the data collection for therapy services being incomplete resulting in service user numbers falling from 2316 users in 2004-05 to 1807 in 2005-06. In 2006-07, Disability ACT better aligned the funded service types with the NMDS classifications. This realignment better reflects the costs of expenditure on community support in the ACT non-government sector.
- (i) The definition of the potential population was revised in 2012, effective from 2008-09. See section 14.7.

⁽a) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.

⁽b) See section 14.7 for detailed information on the estimated potential population.

⁽c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

⁽d) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.

Table 14A.21 Users of NDA community access services (aged 0-64 years), as a proportion of the potential population for community access services (a), (b), (c)

Unit NSW (d) Vic (e) Qld WA (f) SA (g) Tas ACT NT Aust

- (e) As part of an output structure review in Victoria, an activity that was previously classified under community access was amalgamated under community support in that jurisdiction from 2012–13 onwards.
- (f) Data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06.
- (g) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (h) The definition of the potential population was revised in 2012, effective from 2008-09. See section 14.7.

Persons	%	7.6	7.6	8.7	4.8	9.3	7.8	5.9	1.7	7.5

- (a) Open employment services are delivered by the Australian Government.
- (b) See section 14.7 for detailed information on the estimation of the number of people with an employment restriction.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) State/Territory delivered disability support services comprise accommodation support, community support, community access and respite.
- (d) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (e) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (g) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.

Table 14A.27 Users of NDA accommodation support services aged 0-64 years, by need for help in life area (a), (b), (c), (d)

Unit NSW Vic Qld WA SA (e) Tas ACT NT Aust

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.
 - Nil or rounded to zero. np Not published.

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.np Not published.

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) As part of an output structure review in Victoria, an activity that was previously classified under community access was amalgamated under community support in that jurisdiction from 2012–13 onwards.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (g) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.
 - Nil or rounded to zero. **np** Not published.

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the NMDS for these years.
- (d) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.
 - Nil or rounded to zero. np Not published.

NSW

Unit

Vic Tas Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were

Qld

WA

SA

ACT

reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.

(d) Need for help with ADL relates to the level of support needed in the areas of self care, mobility and communication. It does not necessarily relate to the level of support needed to find or maintain employment.

- (e) The coding procedures used for need for assistance data items changed for open employment service users in 2008-09. Data should be used with caution.
- Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
 - Nil or rounded to zero.

- (a) Open employment services are delivered by the Australian Government.
- (b) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (e) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.
 - Nil or rounded to zero. **np** Not published.

Source: AIHW (unpublished), DS NMDS 2009-10 to 2013-14, CSTDA NMDS 2007-08 and 2008-09.

- (a) Supported employment services are delivered by the Australian Government.
- (b) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (e) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.
 - Nil or rounded to zero. **np** Not published.

Source: AIHW (unpublished), DS NMDS 2009-10 to 2013-14, CSTDA NMDS 2007-08 and 2008-09.

- (a) See section 14.7 for detailed information on the estimated potential population.
- (b) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Data for all service users exclude 290 service users in 2004-05, 216 service users in 2005-06, 382 service users in 2006-07, 269 service users in 2007-08 whose postcode was not reported and 259 service users in 2008-09 whose geographic location could not be derived. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (e) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) Comparisons of access per 1000 population between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability.
- (g) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (h) Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (i) ACT data for service users per 1000 population in inner regional areas are not published as they are based on a small number of service users.
 - .. Not applicable. **np** Not published. Nil or rounded to zero.

Table 14A.35 Users of NDA community support services, by remoteness (a), (b), (c), (d), (e), (f)

- (a) See section 14.7 for detailed information on the estimated potential population.
- (b) Data on service users in each geographic location were estimated based on service users' residential postcodes. Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Data for all service users exclude 1717 service users in 2006-07, 3752 service users in 2007-08 whose postcode was not reported and 5489 service users in 2008-09 whose geographic location could not be derived. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (e) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) Comparisons of access per 1000 population between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability.
- (g) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (h) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
 - .. Not applicable. **np** Not published. Nil or rounded to zero.

- (a) See section 14.7 for detailed information on the estimated potential population.
- (b) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.'
- (d) Data for all service users exclude 1730 service users in 2006-07, 2184 service users in 2007-08 whose postcode was not reported and 2258 service users in 2008-09 whose geographic location could not be derived. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (e) Data on service users per 1000 people are derived by dividing the number of service users in a geographic location by the number of population aged under 65 years in that geographic location, multiplied by 1000. Data on service users per 1000 potential population are derived by dividing the number of service users in a geographic location by the potential population aged under 65 years in that geographic location, multiplied by 1000. The 'major cities and inner regional' classification was derived by adding major cities and inner regional data. The 'outer regional and remote/very remote' classification was derived by adding outer regional, remote and very remote data. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (f) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (g) Comparisons of access per 1000 people between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability.
- (h) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.

Source: AIHW (unpublished), DS NMDS 2009-10 to 2013-14, CSTDA NMDS 2007-08 to 2008-09; AIHW analysis of the ABS Estimated Resident Population June 2007-2013, ABS Census of Population and Housing 2011 and the ABS SDAC 2009 and 2012.

REPORT ON GOVERNMENT SERVICES 2016

⁽i) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

^{..} Not applicable. **np** Not published. – Nil or rounded to Zero.

Users	%	0.7	0.1	2.2	7.4	4.2	0.9	np	39.2	1.6

- (a) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (b) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (c) Data for all service users exclude 637 service users in 2006-07, 483 service users in 2007-08 whose postcode was not reported and 512 service users in 2008-09 whose geographic location could not be determined. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (d) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) Comparisons of access per 1000 people between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability.
- (f) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (g) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
 - .. Not applicable. **np** Not published. Nil or rounded to Zero.

⁽a) See section 14.7 for detailed information on the estimated potential population.

⁽b) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the postcode area in each geographic location.

⁽c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.

⁽d) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

Table 14A.38 Users of NDA employment services, by remoteness (a), (b), (c), (d), (e)

Unit	NSW	Vic	Qld	WA	SA	Tas	ACT (f)	NT	Aust
							` '		

- (e) Data for all service users exclude ten service users in 2004-05, 231 service users in 2005-06, 13 service users in 2006-07, 136 service users in 2007-08 whose postcode was not reported and 83 service users in 2008-09 whose geographic location could not be derived, thus totals may differ from other tables. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (f) Service user data for inner regional areas of ACT include service users from inner regional residential postcodes that are in NSW.
 - .. Not applicable. **np** Not published. Nil or rounded to Zero.

- (a) State/Territory delivered disability support services comprise accommodation support, community support, community access and respite.
- (b) See section 14.7 for detailed information on the estimated potential population.
- (c) Changes in the linking procedures implemented for 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for this year.
- (d) Disability support services reported in this table are delivered by states and territories. Since 2011, under the National Health Reform Agreement the Commonwealth funds these services for Indigenous people aged 50-64, except in Victoria and WA.
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

2013-14	1.7	1.4	1.6	1.9	4.1	3.1	1.6	2.2	1.8

- (a) Data for all service users exclude 2436 service users in 2004-05, 687 service users in 2005-06, 868 service users in 2006-07, 686 service users in 2007-08 and 748 service users in 2008-09 whose Indigenous status was not reported, thus accomodation support service users per 1000 total population aged under 65 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (b) Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (c) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) See section 14.7 for detailed information on the estimated potential population.
- (e) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (g) ACT data for service users per 1000 Indigenous Australians/potential population are not published for some years as they are based on a small number of service users.

np Not published.

2012-13	5.9	8.6	4.6	6.3	9.8	11.5	12.1	8.4	6.8
2013-14	5.5	8.7	4.9	6.6	10.5	11.6	15.6	8.2	6.9

- (a) Data for all service users exclude 27 356 service users in 2004-05, 15 013 service users in 2005-06, 5451 service users in 2006-07, 5788 service users in 2007-08 and 9197 service users in 2008-09 whose Indigenous status was not reported, thus community support service users per 1000 total population may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (b) Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (c) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) See section 14.7 for detailed information on the estimated potential population.
- (e) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (f) For Victorian 2012-13 expenditure data, the reduction in expenditure dollars in Community Access was offset equally by a corresponding increase in Community Support. This was due to an output structure realignment, whereby Day Programs was amalgamated under Individualised Support Packages from 2012-13 onwards.
- (g) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

- (a) Data for all service users exclude 5222 service users in 2004-05, 3057 service users in 2005-06, 3218 service users in 2006-07, 3499 service users in 2007-08 and 4875 service users in 2008-09 whose Indigenous status was not reported, thus community access service users per 1000 total population may differ from other tables. This 'not reported' total includes recreation/holiday programs (service type 3.02) who were not required to complete the item on Indigenous status; however those who did provide a response are included in the data. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (b) Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (c) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) See section 14.7 for detailed information on the estimated potential population.
- (e) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (f) For Victorian 2012-13 expenditure data, the reduction in expenditure dollars in Community Access was offset equally by a corresponding increase in Community Support. This was due to an output structure realignment, whereby Day Programs was amalgamated under Individualised Support Packages from 2012-13 onwards.
- (g) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (h) ACT data for service users per 1000 Indigenous Australians/potential population are not published for some years as they are based on a small number of service users.

np Not published.

2013-14	9.0	8.3	9.2	5.9	11.8	9.7	6.5	2.6	8.5

- (a) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (b) Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (c) Data for all service users exclude 4498 service users in 2003-04, 2665 service users in 2004-05, 1288 service users in 2005-06, 91 service users in 2006-07, 126 service users in 2007-08 and 267 service users in 2008-09 whose Indigenous status was not reported, thus employment service users per 1000 total population aged 15–64 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (d) See section 14.7 for detailed information on the estimated potential population.
- (e) In 2011-12, South Australia implemented modified models of service in adult community teams which streamlined the provision of service and response.

- (a) Data for service users born in a non-English speaking country were based on responses for country of birth with English Proficiency Groups 2–4. For 2004-05 data, this includes all countries except Australia, New Zealand, Canada, United Kingdom, South Africa, Ireland or the United States of America, which are classified as English speaking countries. From 2005-06, Zimbabwe is also included. Where country of birth was inconsistently recorded for the same service user, the service user was counted as having been born in a non-English speaking country.
- (b) Data for all service users exclude 866 service users in 2004-05, 824 service users in 2005-06, 834 service users in 2006-07, 603 service users in 2007-08 and 705 service users in 2008-09 whose country of birth was not reported, thus accommodation support service users per 1000 total population aged under 65 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (c) The potential populations and general populations of people born in an English/non-English speaking country are derived using country of birth data from the Australian Census of Population and Housing and the estimated resident population of states and territories in the relevant year. Estimates exclude people whose country of birth was not stated or who were visitors to Australia.
- (d) See section 14.7 for detailed information on the estimated potential population.
- (e) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (g) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
 - Nil or rounded to zero

- (a) Data for service users born in a non-English speaking country were based on responses for country of birth with English Proficiency Groups 2–4. For 2004-05 data, this includes all countries except Australia, New Zealand, Canada, United Kingdom, South Africa, Ireland or the United States of America, which are classified as English speaking countries. From 2005-06, Zimbabwe is also included. Where country of birth was inconsistently recorded for the same service user, the service user was counted as having been born in a non-English speaking country.
- (b) Data for all service users exclude 1550 service users in 2006-07, 1603 service users in 2007-08 and 1754 service users in 2008-09 whose country of birth was not reported, thus respite service users per 1000 total population aged under 65 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (c) The potential populations and general populations of people born in an English/non-English speaking country are derived using country of birth data from the Australian Census of Population and Housing and the estimated resident population of states and territories in the relevant year. Estimates exclude people whose country of birth was not stated or who were visitors to Australia.

Table 14A.51 Users of NDA respite services, by country of birth (a), (b), (c), (d)

(۵۱	Changes to linking	propoduros	implomente	ad for (2007 0	0 and 20	00 00 4	loto mov	hava tha	offoot	_f

- (d) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

⁽a) Employment Support Services are delivered by the Australian Government.

⁽b) See section 14.7 for detailed information on the estimation of the number of people with an employment restriction.

⁽c) Data on service users in each remotness area were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the postcode area in each geographic location.

Table 14A.53 Users of NDA open employment services/ Employment Support Services aged 15-64 years, by country of birth and remoteness (a), (b), (c), (d)

Unit NSW Vic Qld WA SA Tas ACT NT Aust (e)

- (e) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory
- (f) Includes people with not stated Country of Birth.
- (g) Includes people with not stated Remoteness Area.
 - .. Not applicable. np Not published. Nil or rounded to Zero.

- (a) Disability Management Services are delivered by the Australian Government.
- (b) See section 14.7 for detailed information on the estimation of the number of people with an employment restriction.
- (c) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or Territory.
- (d) Includes people with not stated Country of Birth.

- (a) Supported Employment Services are delivered by the Australian Government.
- (b) See section 14.7 for detailed information on the estimated potential population.
- (c) Data on service users in each remoteness area were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (d) Changes in the linking procedures implemented for 2008-09 data may have the effect of slightly increasing the number of unique service users within the DS NMDS for this years.
- (e) Numbers for Australia may not equal the sum of numbers for each State and Territory because some users accessed services in more than one State or
- (f) Includes people with not stated Country of Birth.
- (g) Includes people with not stated Remoteness Area.
 - .. Not applicable. **np** not published. Nil or rounded to zero.

- (a) Individual people can access services from both accommodation service type categories (institutional/large residential or community accommodation and care services) in a year.
- (b) Community accommodation and care services include group homes, attendant care/personal care, inhome accommodation support, alternative family placement, and other accommodation support.
- (c) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. The relatively low proportion of accommodation support users in community setting in NSW is largely a historical issue.
- (e) In 2011-12, South Australia implemented modified models of service in adult community teams which streamlined the provision of service and response.

⁽a) Data are for permanent residents in aged care.

Source: Derived from AIHW Younger People with Disability in Residential Aged Care. Bulletin no. 103. Cat. no. AUS 155. Canberra.

⁽b) The definition of YPIRAC service user was refined after the 2006-07 collection.

⁽c) In New South Wales, potential clients are assessed for eligibility and, if eligible, are only offered further services (including an assessment of support needs) when there is capacity to provide them. Clients are not considered service users until they actually receive a YPIRAC-funded support service, such as assistive products and technology, individual care planning or accommodation support services.

Table 14A.61 Estimated number of YPIRAC service users who have achieved program objectives since entry to the program, 30 June 2011 (a), (b), (c), (d), (e), (f)

	Unit	0-50 Years	0-64 Years	Total
Objective 1				
People moving out of residential aged care to more age- appropriate supported disability accommodation	no.	197	53	250
Objective 2				
People at risk diverted from inappropriate admission to residential aged care	no.	213	31	244
Objective 3				
People provided with enhanced services within a residential aged care setting, for whom residential aged care is the only available, suitable supported accommodation option	no.	358	98	456
Total YPIRAC service users in reporting period	no.	1109	323	1432
Objective 1				
People moving out of residential aged care to more age- appropriate supported disability accommodation	%	17.8	4.8	22.5
Objective 2				
People at risk diverted from inappropriate admission to residential aged care	%	19.2	2.8	22.0
Objective 3				
People provided with enhanced services within a residential aged care setting, for whom residential aged care is the only available, suitable supported accommodation option	%	32.3	8.8	41.1

- (a) Service user numbers are estimates after the use of a statistical linkage key to adjust for individuals who received services in more than one jurisdictions therefore state and territory totals may not add to the Australian total.
- (b) Service users may have received services in more than one collection period and may have had different target groups and residential settings recorded in different years. The most recently provided target group and residential setting were used to determine whether service users have achieved program objectives.
- (c) The definition of YPIRAC service user was refined after the 2006-07 collection.
- (d) The definition of 'YPIRAC assessment' was refined, 'YPIRAC client monitoring' was added as a service type and the data items relating to service use were refined and restructured after the 2006–07 reporting year.
- (e) Total is a running total over 5 years of the YPIRAC initiative. Numbers may not add to the total number of YPIRAC users as not all service users may have achieved objectives, and some service users may have achieved more than one objective as their circumstances or service availability changed over time.
- (f) The 50-64 age group includes a small number of YPIRAC service users (<5) aged 66 who were included in YPIRAC for operational reasons.

Features of qual assurance system

quality Under the Disability Inclusion Act (DIA) 2014, all government funded or provided services for people with disability must conform to the principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

Ageing, Disability and Home Care's (ADHC) quality reform is built on the National Quality Framework and is based on the NSW Disability Services Standards (DSS), which align with the endorsed National Standards for Disability Services. The reform aims to deliver a consistent approach to quality assurance across the sector. Through the use of external verification by a third party, people with a disability, their families and carers, ADHC and other stakeholders will have assurance that all service providers are meeting the NSW DSS.

The reform aligns with ADHC's strategic objective to develop a unified, regulated sector with service users at the centre and the sector's own Directions for Industry Development. It is being implemented in partnership with National Disability Services (NDS). As set out in the 2012 – 2015 Funding Agreement, and ADHC's quality policy, all disability funded service providers by 30 June 2015 will be required to:

- 1. Implement a quality management system; and
- 2. Provide evidence to an independent third party to confirm organisational performance against the NSW DSS.

From 1 July 2013, service providers are required to report on their progress in achieving the milestones which are fundamental to the implementation of ADHC's quality reform requirements. The Quality Framework Reporting (QFR) has been developed to assist organisations in reviewing service performance and progress against implementing the quality requirements and meeting the NSW DSS. The requirement to complete and submit a QFR is part of an organisation's Funding Agreement with ADHC. The QFR forms part of the reporting requirements outlined in Clause 4.2 - Reporting of the Funding Agreement regarding providing information on, or in relation to, any third party accreditations, verifications or certifications. The QFR serves as a statement of an organisation's ongoing commitment to quality and is designed to encourage service providers to engage in a process of continuous quality improvement as the sector transitions to a person centred disability service system.

For service providers' receiving only Community Care Support Program (CCSP) funding the requirement to comply with the Home Care Standards, will continue to apply until 30 June 2015. The ADHC quality reform requirements will apply from 1 July 2015.

What are the relevant NSW Disability Services Standards 2012 service standards

Disability Inclusion Act (DIA) 2014 principles and application of principles

Features assurance system

quality Under the Disability Inclusion Act (DIA) 2014, all government funded or provided services for people with disability must conform to the principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

The NSW Disability Services Standards were updated in June 2012 1 Principles are consistent with the revised National Standards for Disability Persons with disabilities have the same basic human rights as Services (National Standards) 2013.

The six NSW Disability Services Standards are:

Rights

Each person receives a service that promotes and respects their legal and human rights and enables them to exercise choice like everyone else in the community

Participation and inclusion

Each person is encouraged and supported to contribute to social and civic life in their communities in the way they choose

Individual Outcomes

Each person is supported to exercise choice and control over the design and delivery of their supports and services

Feedback and complaints

When a person wants to make a complaint, the service provider will make sure the person's views are respected, that they are informed as the complaint is dealt with, and have the opportunity to be involved in the resolution process

Service access

Each person is assisted to access the supports and services they need to live the life they choose

other members of Australian society. They also have the rights needed to ensure that their specific needs are met.

Disability Inclusion Act (DIA) 2014 principles and application of principles

Their rights, which apply irrespective of the nature, origin, type or degree of disability, include the following:

- a) persons with disabilities are individuals who have the inherent right to respect for their human worth and dignity,
- b) persons with disabilities have the right to live in and be part of the community.
- c) persons with disabilities have the right to realise their individual capacities for physical, social, emotional and intellectual development,
- d) persons with disabilities have the same rights as other members of Australian society to services which will support their attaining a reasonable quality of life,
- e) persons with disabilities have the right to choose their own lifestyle and to have access to information, provided in a manner appropriate to their disability and cultural background, necessary to allow informed choice,
- f) persons with disabilities have the same right as other members of Australian society to participate in the decisions which affect their lives.
- g) persons with disabilities receiving services have the same right as other members of Australian society to receive those services in a manner which results in the least restriction of their rights and opportunities,

Features of quassurance system

quality Under the Disability Inclusion Act (DIA) 2014, all government funded or provided services for people with disability must conform to the principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

Service management

Service providers are well managed and have strong and effective governance to deliver positive outcomes for the people they support.

- h) persons with disabilities have the right to pursue any grievance in relation to services without fear of the services being discontinued or recrimination from service providers,
- i) persons with disabilities have the right to protection from neglect, abuse and exploitation.
- 2 Applications of principles

Services and programs of services must apply the principles set out in clause 1.

In particular, they must be designed and administered so as to achieve the following:

- (a) to have as their focus the achievement of positive outcomes for persons with disabilities, such as increased independence, employment opportunities and integration into the community,
- a) Disability Inclusion Act (DIA) 2014 principles and application of principles
- (b) to contribute to ensuring that the conditions of the everyday life of persons with disabilities are the same as, or as close as possible to, norms and patterns which are valued in the general community,

Features of quality Under the Disability Inclusion Act (DIA) 2014, all government funded or provided services for people with disability must conform to the assurance system principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

- (c) to form part of local co-ordinated service systems and other services generally available to members of the community, wherever possible,
- (d) to meet the individual needs and goals of the persons with disabilities receiving services,
- (e) to meet the needs of persons with disabilities who experience an additional disadvantage as a result of their gender, ethnic origin or Aboriginality,
- (f) to promote recognition of the competence of, and enhance the image of, persons with disabilities,
- b) Disability Inclusion Act (DIA) 2014 principles and application of principles
- (g) to promote the participation of persons with disabilities in the life of the local community through maximum physical and social integration in that community,
- (h) to ensure that no single organisation providing services exercises control over all or most aspects of the life of a person with disabilities,
- (i) to ensure that organisations providing services (whether specifically to persons with disabilities or generally to members of the community) are accountable to persons with disabilities who use them, the advocates of those persons, the State and the community generally for the provision of information from which the quality of those services can be judged,
- (j) to provide opportunities for persons with disabilities to reach goals and enjoy lifestyles which are valued by the community generally and are appropriate to their chronological age,
- (k) to ensure that persons with disabilities participate in the decisions that affect their lives,

Features of quality Under the Disability Inclusion Act (DIA) 2014, all government funded or provided services for people with disability must conform to the assurance system principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

- (I) to ensure that persons with disabilities have access to advocacy support where necessary to ensure adequate participation in decision-making about the services they receive,
- (m) to recognise the importance of preserving the family relationships and the cultural and linguistic environments of persons with disabilities,
- (n) to ensure that appropriate avenues exist for persons with disabilities to raise and have resolved any grievances about services, and to ensure that a person raising any such grievance does not suffer any reprisal,
- (o) to provide persons with disabilities with, and encourage them to make use of, avenues for participating in the planning and operation of services and programs which they receive and to provide opportunities for consultation in relation to the development of major policy and program changes,
- (p) to respect the rights of persons with disabilities to privacy and confidentiality.

Features of quality assurance system

quality Under the Disability Inclusion Act (DIA) 2014, all government funded or provided services for people with disability must conform to the principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

Future directions

- 1. The Disability Inclusion Bill 2014 was passed by the NSW Parliament on 14 August 2014 and is now the Disability Inclusion Act 2014 (the Act) and will replace the NSW Disability Services Act 1993. When the new Act and regulation commences, it will have two main roles:Committing the NSW Government to making communities more inclusive and accessible for people with disability now and into the future. These commitments will continue even when the National Disability Insurance Scheme (NDIS) is operating across NSW.
- 2. Regulating specialist disability supports and services to people with disability in NSW and introducing better safeguards for these services until the change over to the NDIS.

The new Act and regulation sets out as a condition of the provision of funding to any eligible entity that it must comply with the NSW Disability Services Standards and provide evidence to an independent third party to confirm organisational performance against the NSW Disability Services Standards or comparable standards of another jurisdiction approved by the Secretary.

The Disability Inclusion Act and Regulations 2014 commenced from 3 December 2014.

Implementation of the NSW Quality Framework will assist providers of specialist disability services in NSW to be well positioned to transition to the NDIS.

The following quality requirements incorporate the NSW Disability Service Standards and National Home Care Standards:

- An articulated quality policy statement that requires service providers to demonstrate conformity to quality requirements including
- Implement a quality management system;
- Provide evidence to an independent third party to confirm organisational performance against the NSW Disability Service Standards.
- Third Party Verification processes to be undertaken on a three year cycle;
- A strategy to support assessors, clients and providers in the implementation of the framework.
- Mutual recognition of quality standards which providers are required to meet through other funding programs

REPORT ON GOVERNMENT SERVICES 2016 SERVICES FOR PEOPLE WITH DISABILITY PAGE 6 of TABLE 14A.66

Features of assurance system

quality Under the Disability Act 2006, the Minister must determine the standards to be met by disability service providers in the provision of disability services. A disability service provider must comply with the relevant applicable standards. The Secretary, Department of Human Services, must specify performance measures and may monitor service provider compliance with the relevant performance measures in respect of the standards. Both the standards and performance measures have been published in the Victoria Government Gazette.

The *Quality Framework for Disability Services in Victoria (2007)* was implemented in 1997 and revised in 2007 to better support the goals of the Victorian State Disability Plan 2002–2012 and the principles of the Disability Act 2006. The *Quality Framework for Disability Services in Victoria (2007)* introduced critical new key elements:

- Outcomes Standards
- focus on supports to facilitate personal outcomes
- a framework for independent quality monitoring.

Under the Quality Framework, disability service providers are required to undertake organisational self-assessment against the Standards for Disability Services in Victoria, including service user assessment of the service provider's performance against these Standards. Service providers may use any self-assessment and service user assessment processes with the capacity to demonstrate compliance with the Standards, but are encouraged to select an approach that best reflects the service type and consumer requirements. Disability service providers measure the quality of their practice by gathering data against the evidence indicators of the standards. The evidence indicators include:

- indicators that describe compliance with the Standards
- developmental indicators that describe examples of continuous quality improvement.

The Quality Framework requires all disability service providers to have a quality plan. The quality plan uses information gathered from the self-assessment (including the service user assessment) and any other quality review processes and sets the priorities and actions for improvements for the forthcoming continuous quality improvement cycle.

Both department-managed and community service organisations disability service providers must comply with the Standards and are also required to undergo independent monitoring for compliance against the Standards by 2012.

What are the relevant Standards for Disability Services in Victoria: Outcome Standards service standards

Standards for Disability Services in Victoria: Industry Standards

The *Outcomes Standards* are used to determine whether services and supports make a difference in the lives of people. The Outcome Standards are:

Individuality

Each individual has goals, wants, aspirations and support needs and makes decisions and choices about their life

Capacity

Each individual's abilities and potential are identified and encouraged

Participation

Each individual is able to access his or her community

Citizenship

Each individual has rights and responsibilities as a member of the community

Leadership

Each individual has the opportunity to inform the way that supports are provided

Evidence indicators

A suite of evidence indicators of the Outcome Standards has been developed for 16 life areas. The indicators map back to the Outcome Standards for Disability Services and will be used to determine compliance. These evidence indicators describe measurable elements of practice that may be used to assess whether the support is in place to assist people with a disability achieve the outcome.

The *Industry Standards* are used to measure systems and processes and ensure that organisations are meeting legislative and funding obligations. The Industry Standards are:

Service Access

Fair and equitable practices that are consistent with funding obligations, applicable legislation and purpose of the service are applied when managing and allocating resources.

Individual Needs

Planning and support is tailored, flexible, responsive and appropriate to the individual.

Decision-Making and Choice

Support options are planned, developed, implemented and reviewed in a manner that are responsive to the decisions, choices, and aspirations of individuals.

Privacy, Dignity and Confidentiality

Privacy, dignity and confidentiality is respected and maintained.

Participation and Integration

Support options are planned, developed, implemented and reviewed in a manner that build opportunities for individuals to participate in the life of the community.

Standards for Disability Services in Victoria: Outcome Standards

Standards for Disability Services in Victoria: Industry Standards

See the following website for the full set of outcome standards evidence indicators:

www.dhs.vic.gov.au/__data/assets/word_doc/0006/153096/quality_evidenceindicatorsoutcomestandards_doc_0808.doc

Valued Status

Support options are planned, developed, implemented and reviewed in a manner that recognise the skills, abilities and potential of individuals and enable the achievement of valued roles in the community.

Complaints and Disputes

Complaints and disputes are addressed promptly, fairly and respectfully without compromising services to the individual.

• Service Management

Management and governance practice is sound, accountable and consistent with current disability policy and practice.

• Freedom from Abuse and Neglect

Supports are provided in safe and healthy environments that support individuals to exercise their legal and human rights.

Evidence indicators

The evidence indicators make sure that the expectations for compliance with each standard are clear and provide a level of consistency with other quality frameworks. See the following website for the set of industry standard evidence indicators: www.dhs.vic.gov.au/disability/improving_supports/quality_framework_for_disability_services/implementing_the_quality_framework_200 7/evidence-indicators

Future directions

The Victorian Government is actively exploring ways to reduce regulatory burden. This includes development of a common standards and quality assurance framework within the Department of Human Services. Mapping common standards prevalent in the disability services sector commenced in 2009.

REPORT ON GOVERNMENT SERVICES 2016 SERVICES FOR PEOPLE WITH DISABILITY PAGE 3 of TABLE 14A.67

Table 14A.68 Queensland quality assurance processes

Features assurance system quality The Disability Services Act 2006 (the Act) provides a framework for safeguarding and promoting the rights of people with disability and enabling access to quality standards of care.

As a result of changes to the Act in 2014 to streamline requirements for funded service providers, quality standards are made administratively and apply as a contractual obligation for providers.

Under current arrangements, service providers funded by the Department of Communities, Child Safety and Disability Services and departmentally delivered disability services are required to comply with the Human Services Quality Framework. The framework includes a set of quality standards (Human Services Quality Standards), a process for assessing the performance of service providers against the standards, and a continuous improvement framework that supports the participation of people using service in service delivery and design.

The Human Services Quality Standards cover the core elements of human service delivery and include a set of performance indicators for each standard and mandatory evidence requirements. Providers delivering direct services to vulnerable clients are required to undergo a cycle of independent third party assessment to achieve and maintain certification against the standards. This three year cycle includes a mid-term assessment at 18 months to ensure continued compliance with the standards and promote continuous improvement in service delivery.

service standards?

What are the relevant The Human Services Quality Standards came into effect in 2013 and are consistent with the National Standards for Disability Services (2013). The six standards are:

> **Governance and management** — Sound governance and management systems that support accountability and transparency; compliance with legislative and policy requirements; appropriate controls of privacy and confidentiality; continuous service improvement; and contribute to maximising outcomes for people using services.

Service access — Services are made available in a fair, transparent and non-discriminatory way, on the basis of relative need and available resources.

Responding to individual need — Services are assessed, planned, and reviewed in collaboration with people using the services. Flexible and inclusive methods support identification of individual strengths, needs, goals and aspirations and development of skills to enable people using services to participate in and achieve valued roles within their community. The use of referral pathways and partnerships promote integrated service provision.

REPORT ON GOVERNMENT SERVICES 2016

SERVICES FOR PEOPLE WITH DISABILITY PAGE 1 of TABLE 14A.68

Table 14A.68 Queensland quality assurance processes

Safety, wellbeing and rights — The human and legal rights of people using services are protected and promoted, including people's right to receive services that are delivered in the least restrictive way and protect their safety and wellbeing, participation and choice. The application of a proactive approach to preventing, identifying and responding to risks to the safety and wellbeing of people using services; and reporting and responding to allegations and/or incidents of harm, abuse and/or neglect.

Feedback, **complaints and appeals** — Effective feedback, complaints and appeals processes that are fair, accessible and accountable lead to improvements in service delivery. People using services are supported to make a complaint without fear of retribution.

Human Resources — Effective human resource management systems, including recruitment, induction and supervisory processes, result in quality service provision.

Future directions

The Department of Communities, Child Safety and Disability Services is working to implement the Human Services Quality Framework to all services funded by the department.

The Department is also working with the Commonwealth Government to ensure appropriate quality and safeguards are in place for Queenslanders with a disability participating in the National Disability Insurance Scheme.

Source: Queensland Government (unpublished).

Features of assurance system

quality Under the WA Disability Services Act 1993, the Disability Services Commission can establish guidelines and standards for the provision of disability services other than disability services provided by carers. The DSA does not specify how services are to be monitored to ensure they comply with the guidelines and standards.

The Disability Services Commission has recently implemented the Quality Management Framework (QMF). Under the QMF, recurrently funded service providers must demonstrate that the services they provide continuously address the quality requirements. One of the key features of the QMF is the consumer focused outcomes and performance indicators for each service type. Outcomes are what services are expected to achieve for the benefit of the individual using their service. Under the QMF, all services will also be evaluated for their compliance with the nine Disability Services Standards. Services will be evaluated through the following processes:

- Service provider and consumer baseline assessment surveys (BAS) every five years service providers will complete a BAS about the QMF Outcomes and some of the Disability Services Standards. At the same time as the service provider BAS, a separate survey will be sent to a representative sample of individuals with a disability, their families and carers at a program level for each service provider. The information collected from the BAS will be presented in a written report to each service provider.
- Self Assessments every year (other than the year a BAS or Independent Evaluation occurs) service providers will complete a Self Assessment. Service providers will be expected to provide information about their consumers' progress against the QMF outcomes. Service providers will also be expected to invite groups of consumers, their families and carers to have a say about different aspects of the service provided and include their feedback as part of the Self Assessment report.
- Independent Evaluation an external independent evaluators will complete an independent evaluation of services every 3–4 years. The focus of an independent evaluation will be on the results from the service provider's last BAS or Self Assessment report. The independent evaluator will pay particular attention to the views of people with disabilities, their families and carers and invite them to have a say about the guality of the services they receive.

What are the relevant WA Disability Services Standards service standards

QMF outcomes

REPORT ON GOVERNMENT SERVICES 2016 SERVICES FOR PEOPLE WITH DISABILITY PAGE 1 of TABLE 14A.69

Service Access

Each consumer seeking a service has access to a service on the basis of relative need and available resources.

Individual Needs

Each person with a disability receives a service which is designed to meet, in the least restrictive way, his or her individual needs and personal goals.

Decision Making and Choice

Each person with a disability has the opportunity to participate as fully as possible in making decisions about the events and activities of his or her daily life in relation to the services he or she receives.

Privacy, Dignity and Confidentiality

Each consumer's right to privacy, dignity and confidentiality in all aspects of his or her life is recognised and respected.

Participation and Integration

Each person with a disability is supported and encouraged to participate and be involved in the life of the community.

Valued Status

Each person with a disability has the opportunity to develop and maintain skills and to participate in activities that enable him or her to achieve valued roles in the community. Each outcome has a series of performance indicators by which the performance of disability service providers will be assessed and evaluated. A set of steps or sequence of activities that need to be undertaken to achieve a desired outcome have also been developed for each service area (these are called response chains). For more information on the indicators and the response chains see the following website:

www.disability.wa.gov.au/serviceproviders/qmf/qmfindicators.html

Outcomes For Accommodation Support

Wellbeing

Outcome: Maintenance and/or improvement of the social, mental, physical, emotional, spiritual, sexual and cultural aspects of the individual.

Relationships And Social Connection

Outcome: Relationships are diverse and contribute to the individual's life and social connections.

Lifestyle

Outcome: Participation in a lifestyle of the individual's choice.

Home

Outcome: The place where a person lives is safe, secure and comfortable, and where they can be themselves.

WA Disability Services Standards

Complaints and Disputes

Each consumer is free to raise and have resolved, any complaints or disputes he or she may have regarding the service provider or the service.

Service Management

Each service provider adopts sound management practices which maximise outcomes for consumers.

Protection of Human Rights and Freedom from Abuse and Neglect

The service provider acts to prevent abuse and neglect, and to uphold the legal and human rights of consumers.

QMF outcomes

Outcomes for Individual Advocacy

Capacity Building

Outcome: The individual's abilities and potential to contribute to society are encouraged and respected and sensitive to their lifestyle and culture.

Community Connections

Outcome: The individual is welcomed by their community to participate in the activities and the relationships of their choice.

Citizenship

Outcome: The individual is aware of their rights and exercises them as a community member

Outcomes for Systemic Advocacy

Citizenship

Outcome: The community recognises people with a disability as citizens with equal participation in community life.

Outcomes for Alternatives to Employment

Social participation

Outcome: Participation and engagement in and/or with the community, in activities of the individual's choice (including but not limited to recreational, community, domestic, social, cultural, religious) that involves interacting with individuals other than paid support workers and immediate family members.

QMF outcomes

Personal Independence

Outcome: engagement in natural settings, using natural supports, in tasks of every day life (including but not limited to personal, recreational, community, domestic, social, religious, cultural).

Life Long Learning

Outcome: Maintenance and acquisition of skills, competencies and knowledge to support the individual's independence, personal interests and inclusion in their community.

Enhanced Natural Support Networks

Outcome: Relationships established with individuals other than immediate family members and paid support workers that contribute in a positive way to the individual in their everyday life.

Outcomes For Disability Professional Services

Independence

Outcome: The individual's independence in daily living is maximised.

Participation

Outcome: Participation in everyday life in usual settings.

Outcomes for Recreation Services

Wellbeing

Outcome: To maintain and or improve the individual's sense of well

being.

QMF outcomes

Social Connectedness

Outcome: The individual participates in their community in a range of activities and relationships of their choice.

Welcoming communities

Outcome: Communities are supportive and inclusive of all people.

Future directions

Ongoing work to fully implement the Quality Management Framework across service providers.

REPORT ON GOVERNMENT SERVICES 2016 SERVICES FOR PEOPLE WITH DISABILITY PAGE 4 of TABLE 14A.69

Source: WA Government 2005, Disability Services Standards, www.disability.wa.gov.au/publication/disabilityservicesstandards.html (accessed 1 December 2009). WA Government, Quality Management Framework, www.disability.wa.gov.au/serviceproviders/qmf.html (accessed 1 December 2009); WA Government unpublished.

Features of assurance system

quality Under the SA Disability Services Act 1993, a disability service provider funded under the Act must apply the principles and meet the objectives set out in the Schedules 1 and 2. In addition, the Act specifies that the Minister must cause a disability service funded under the Act to be reviewed at intervals of not more than three years, for the purpose of assessing the extent to which the principles and objectives set out in the Schedules to this Act are being applied and met.

Disability SA only funds and/or purchases disability services from providers that are on the Disability Services Provider Panel. To qualify for the Panel, disability service providers are required to adhere to the National Standards for Disability Services and demonstrate how these standards are implemented in their organisation. Organisations are required to provide information on how they currently monitor compliance with the National Standards for Disability Services. To qualify, all disability service organisations are also required to undertake or have completed a Quality Assurance system. The Service Excellence Program has been developed by the Department for Communities and Social Inclusion for use by non-government community service providers.

The Service Excellence Program is an accredited quality improvement program aimed at supporting non-government organisations (NGOs) to improve and achieve sustainable excellence. Service Excellence Program is based on a set of standards that were mapped against a number of quality frameworks, including the National Standards for Disability Services. The structure of SEP is organised around three categories:

- Leadership and Management strategic planning, governance, policies and procedures and financial and contract management.
- People, Partnerships and Communication effective, safe and accessible service delivery.
- Service Provision meeting strategic objectives and consumer needs through high quality services.

Each category is divided into topics with specific standards. Each standard is described through a set of requirements and linked to examples. These provide a guide or set of prompts as to what evidence may be relevant for the requirement of the standard. They are intended to give the organisation some guidance about how to achieve the standard. Under the Service Excellence Program, services can be accredited at the certificate or award level.

The Program includes the following steps:

- Completion of a self-assessment against the Service Excellence Standards service providers identify actions for implementation before an external assessment is undertaken.
- Undertake an external assessment the external assessor provides a written report to confirm the areas where a service provider is performing well and recommend potential areas for improvement.
- Develop a quality action plan the service provider develops a plan based on recommendations from the external assessment report. The plan identifies actions to improve quality against each standards.

Each category is divided into topics with specific standards. Each standard is described through a set of requirements and linked to examples. These provide a guide or set of prompts as to what evidence may be relevant for the requirement of the standard. They are intended to give the organisation some guidance about how to achieve the standard. Under the Service Excellence Program, services can be accredited at the certificate or award level.

Disability SA, the government disability services provider, self-assesses against the Business Excellence Framework adopted across all areas of the Department for Families and Communities. In addition, some Disability SA outlets meet specific quality assurance system requirements in relation to catering, aged care and Home and Community Care services, where applicable.

What are the relevant SA Disability Service Standards service standards?

Certificate level

LEADERSHIP AND MANAGEMENT

Strategic planning is undertaken to

further organisational and service

C.1.1 Strategic Planning:

Service Excellence Program —

Service Excellence Program — Award level (meets the Certificate level standards and additional standards)

Service Access

Each consumer seeking a service has access to a service on the basis of relative need and available resources. Individual Needs

Each person with a disability receives a service which is designed to meet, in the least restrictive way, their individual needs and personal goals.

C.1.2 Business Plans:

C.1 PLANNING

development.

A Business Planning process is used to implement your Strategic Plan and to plan and monitor organisational performance.

LEADERSHIP AND MANAGEMENT

A.1 Planning
A.1.1 Leadership:

Leadership is innovative, progressive and self critical.

A.1.2 Knowledge Management:

The organisation has effective processes to collect and interpret data, to create information and to refine information into knowledge.

SA Disability Service Standards

Service Excellence Program — Certificate level

Service Excellence Program — Award level (meets the Certificate level standards and additional standards)

Decision Making and Choice

Each person with a disability has the opportunity to participate as fully as possible in making decisions about the events and activities of their daily life in relation to the services he or she receives.

Privacy, Dignity and Confidentiality

Each consumer's right to privacy, dignity and confidentiality in all aspects of their life is recognised and respected.

Valued Status

Each person with a disability has the opportunity to develop and maintain skills and to participate in activities that enable them to achieve valued roles in the community.

Participation and Integration

Each person with a disability is supported and encouraged to participate and be involved in the life of the community.

Complaints and Disputes

Each consumer is free to raise and have resolved any complaints or disputes he or she may have regarding the service.

Service Management

Each service adopts sound management practices which maximise outcomes for consumers.

C.2 GOVERNANCE

C.2.1 Sound Governance:

A commitment to sound governance, a high level of mutual accountability, ethical conduct, objectivity and integrity are evident in all activities.

C.2.2 Legislative and Organisational: Policies and procedures are in place to achieve service outcomes in line with legislative and organisational requirements.

C.2.3 Risk Management:

Policies and procedures are in place to manage risk.

C.3 FINANCIAL AND CONTRACT MANAGEMENT

C.3.1 Sound Finances:

The Chief Executive and managers maintain sound financial decision-making processes to ensure the efficient and effective use of the resources under their control. Financial management is transparent, accountable and appropriately authorised. The organisation's physical resources are managed to ensure an effective, safe and efficient service.

A.1.3 Continuous Improvement:

A culture of continuous quality improvement is well established.

A.2 GOVERNANCE

A.2.1 Critical Review:

A commitment to good governance is demonstrated through critical review by the governing body.

A.2.1 Risk Management:

Risks to the organisation, consumers and staff are minimised through formal risk management systems.

A.3 FINANCIAL AND CONTRACT MANAGEMENT

A.3.1 Financial Management:

Financial management practices are effective and aligned to Strategic Directions

A.3.2 Contract Management:

Formal agreements and less formal partnerships reflect individual and organisational values and standards and foster effective relationships.

A.4 PEOPLE

A.4.1 Supporting People:

People at all levels are the essence of an organisation and their full involvement enables their abilities to be directed towards its purpose.

A.4.2 Workforce Planning:

Workforce planning and development considers future organisational requirements and supports competence, commitment and personal development of staff.

A.4.3 Cultural Diversity:

SA Disability Service Standards

Protection of Human Rights and Freedom from Abuse

The service provider acts to prevent abuse and neglect and to uphold the legal and human rights of service recipients.

Service Excellence Program — Certificate level

PEOPLE, PARTNERSHIPS AND COMMUNICATION C.4 PEOPLE

C.4.1 Human Resources: Human resources are managed to create an effective and competent service. Recruitment processes are effective, roles are defined and relevant ongoing training provided.

C.4.2 Occupational Health, Safety and Welfare:

OHS&W systems are incorporated into business planning and work processes. C.5 PARTNERSHIPS

C.5.1Working collaboratively with other organisations on agreed common goals and contributing to knowledge and development of the community.

Service Excellence Program — Award level (meets the Certificate level standards and additional standards)

A.5 PARTNERSHIPS
NO FURTHER REQUIREMENTS AT AWARD
LEVEL

A.6 COMMUNICATION
A.6.1 Organisational Culture:

The organisation pursues an integrated and coordinated service delivery culture.

A.6.2 Improving Communication:

Planned communication strategies ensure consistency and timeliness and engender trust and respect.

A.7 SERVICE OUTCOMES

A.7.1 Benchmarking:

Service Outcomes are compared against

community or industry norms.

A.8 CONSUMER OUTCOMES

A.8.1 Valuing Consumer Participation:

Consumer participation is valued and fostered.

Service Excellence Program — Certificate level

Physical resources include buildings, equipment, furniture, vehicles and IT. C.3.2 Contract Management: Sound administration of contracts should reflect individual and organisational values, enable disclosure and ensure integrity. C.5.2 Teamwork: Co-operation, collaboration and teamwork are achieved through engagement of staff, consumers and stakeholders in development, planning and evaluation. Teamwork exists through alignment of activities to a common purpose and is inclusive of volunteer and student contributions. **6 COMMUNICATION** C.6.1 Information Dissemination: Appropriate communication systems and strategies ensure information is disseminated internally at all levels and externally to all key stakeholders. SERVICE PROVISION SERVICE OUTCOMES

Service Excellence Program — Certificate level

C.7.1 Outcomes Monitored: Service outcomes are planned, monitored and subject to ongoing review. **CONSUMER OUTCOMES** C.8.1 Consumer Participation: Consumers are recognised as key partners in shaping service development and assessing quality of service delivery. C.8.2 Consumer Empowerment: Strategies to empower consumers to take greater control of their care and their lives generally are encouraged. Feedback is valued and is used as a continuous improvement tool.

Future directions

Planning to implement an additional Disability Services Standard: Cultural Competency and Inclusion.

Table 14A.71 **Tasmanian quality assurance processes**

Features of assurance system

quality The Quality and Safety Framework for Tasmania's DHHS Funded Community Sector (the Framework) requires funded community sector organisations to undertake quality and safety activities against recognised standards, have systems and processes in place to record and monitor improvement activities, and to ensure that feedback and learnings from incidents contribute towards enhancing service delivery. Organisations are also required to notify the Department of Health and Human Services (DHHS) of any serious consumer related incident or incidents that impact on the organisation's capacity to deliver the funded service.

Unless a regulatory requirement exists which determines the standards a funded community sector organisation must comply with, the Framework allows organisations to self-select the state, national or international standards most relevant to the services they deliver. The DHHS Quality and Safety Standards remain an option for organisations, however where national standards exist organisations are encouraged to consider utilising them.

The Department of Health and Human Services (DHHS) monitors compliance with the Framework through an annual meeting with the funded community sector organisation, discussing performance against contractual requirements, and a three yearly quality and safety review. The quality and safety review includes a site visit to view the organisation's documentation, systems and processes, and to obtain feedback from consumers, staff, volunteers and management including Board or Committee members. A draft report is provided to the organisation and the organisation's feedback is considered by the review team prior to finalising the report

What are the service standards

relevant Disability Services Standards set out in Part 1 of the Disability Services Act 2011.

The standards to be complied with in respect of the provision of services relating to persons with disabilities are as follows:

- 1. Services are to be designed and administered so as to achieve positive outcomes for persons with disabilities, such as increased independence, education and employment opportunities and integration into the community.
- 2. Services are to be designed and administered so as to ensure that the conditions of every-day life of persons with disabilities are the same as, or as close as possible to, the conditions of every-day life of other members of the community.
- 3. Services are to be provided as part of local co-ordinated service systems and be integrated with services generally available to members of the community, wherever possible.
- 4. Services are to be tailored to meet the individual needs and goals of persons with disabilities.
- 5. Programs and services are to be designed and administered so as to meet the needs of persons with disabilities who experience additional disadvantage as a result of their sex, ethnic origin, Aboriginality or geographic location.

DHHS Quality and Safety Standards

Safe Environment

Consumers receive services in an environment that is safe. *Elements*

- Fire
- Food
- Medication
- Health and Safety

Consumer Focus

Consumers receive services that respect their rights and are responsive to their needs and desires.

Elements

- · Lifestyle and Wellbeing
- · Collaboration and Coordination
- Cultural Diversity
- Individual Safety
- Rights and Responsibilities

Disability Services Standards set out in Part 1 of the *Disability Services Act 2011.*

- 6. Programs and services are to be designed and administered so as to promote recognition of the competence of, and enhance the image of, persons with disabilities.
- 7. Programs and services are to be designed and administered so as to promote the participation of persons with disabilities in the life of the local community through maximum physical and social integration in that community.
- 8. Programs and services are to be designed and administered so as to ensure that no single organization providing services exercises control over all or most aspects of the life of a person with disabilities.
- 9. Programs and services are to be designed and administered so as to be as free as possible from aversive, restrictive and intrusive treatment practices.

DHHS Quality and Safety Standards

Workforce

Consumers receive services that are provided by appropriately trained and supported staff and volunteers.

Elements

- Recruitment
- Roles and Responsibilities
- Professional Development
- Sustainability
- Workforce Diversity

Incidents and Feedback

Consumers receive services from community sector organisations that appropriately manage incidents and actively seek and respond to feedback.

Elements

- Compliments
- Complaints
- Incidents

Disability Services Standards set out in Part 1 of the *Disability Services Act 2011.*

10.Organizations providing services, whether those services are provided specifically to people with disabilities or generally to members of the community, are to be accountable to those persons with disabilities who use their services, the advocates of such people, the State and the community generally for the provision of information from which the quality of their services can be judged.

- 11. Programs and services are to be designed and administered so as to provide opportunities for persons with disabilities to reach goals and enjoy lifestyles which are valued by the community generally and are appropriate to their age.
- 12. Services are to be designed and administered so as to ensure that persons with disabilities have access to advocacy support where necessary to ensure adequate participation in decision making about the services they receive.
- 13. Programs and services are to be designed and administered so as to ensure that appropriate avenues exist for persons with disabilities to raise and have resolved any grievances about services.

DHHS Quality and Safety Standards

Consumer Information

Consumers receive services that recognise and respect their right to have their personal information managed in an appropriately confidential manner.

Elements

- Collection
- Handling
- Security

Governance

Consumers receive services that are effectively and efficiently managed.

Elements

- Culture and Values
- Financial Reporting
- Communication and Engagement
- Evidence Based Decision Making
- · Legislation and Regulation
- Partnership
- Risk Management
- Strategic Planning

Disability Services Standards set out in Part 1 of the *Disability Services Act 2011.*

- 14. Services are to be designed and administered so as to provide persons with disabilities with, and encourage them to make use of, avenues for on-going participation in the planning and operation of services which they receive.
- 15. Programs and services are to be designed and administered so as to provide persons with disabilities with opportunities for consultation in relation to the development of major policy and program changes.
- 16. Programs and services are to be designed and administered so as to respect the rights of persons with disabilities to privacy and confidentiality.
- 17. Priority of access to services is to be on the assessed needs of each person based on:
- (a) the person's wishes
- (b) the level of disability and its impact on the person
- (c) the extent of support provided to the person from all sources
- (d) the benefits to the person of preventive services over remedial measures.

Future directions

Tasmania continues to be actively involved in the development of the NDIS Quality and Safeguards Framework.

REPORT ON GOVERNMENT SERVICES 2016

Features of quassurance system

quality Under the ACT Disability Services Act 1991, the Minister may approve grants of financial assistance to—

- (a) a provider of services; or
- (b) a person with a disability; or
- (c) a researcher;

subject to the prospective grantee entering into an agreement with the Minister.

The Minister shall not approve a grant unless satisfied—

- (a) that the grant would further the principles set out in schedule 1 of the Act and comply with any guidelines (which must be consistent with schedule 1 and 2 of the Act)
- (b) that the programs and services funded by the grant would comply with the requirements set out in schedule 2 of the Act.

The ACT Government have also developed a set of generic good practice standards for community service organisations. The standards are a resource for quality improvement and are designed to help organisations better understand where they are going well and identify and plan how improvements can be made. Service providers are required to undertake a self-assessment process against the standards. The self assessment process includes the following steps: plan the assessment process, undertake assessment against the standards including seeking feedback from service users, develop a quality improvement plan, implement quality improvement plan in conjunction with your overall strategic plan and review progress against the quality improvement plan and evaluate outcomes.

REPORT ON GOVERNMENT SERVICES 2016

What are the relevant ACT Disability Services Act 1991 Schedule 1 and 2 service standards

Schedule 1 Human rights principles to be furthered in relation to people with disabilities

- 1 All people with disabilities are individuals who have the inherent right to respect for their human worth and dignity.
- 2 People with disabilities, whatever the origin, nature, type or degree of disability, have the same basic human rights as other members of society and should be enabled to exercise these basic human rights.
- 3 People with disabilities have the same rights as other members of society to realise their individual capacities for physical, social, emotional and intellectual development.
- 4 People with disabilities and carers of people with disabilities have the same right as other members of society to services that will support their attaining a reasonable quality of life.
- 5 People with disabilities have the same right as other members of society to make and actively participate in the decisions that affect their lives and are entitled to appropriate and necessary support to enable participation in, direction and implementation of the decisions that affect their lives.

Raising the Standard — Generic standards for continuous improvement in community service organisations

Standards - Governance and management

- 3.1 Leadership and governance
- Standard 3.1.1 Leadership
- Standard 3.1.2 Governing body
- Standard 3.1.3 Governance processes
- 3.2 Effective management
- Standard 3.2.1 Effective and strategic management
- Standard 3.2.2 Accountability
- Standard 3.2.3 Financial management

- 3.3 Planning, evaluation and quality improvement
- Standard 3.3.1 Planning
- Standard 3.3.2 Evaluation
- Standard 3.3.3 Research
- Standard 3.3.4 Quality improvement
- 3.4 Human resource management
- Standard 3.4.1 Recruitment, selection and appointment
- Standard 3.4.2 Performance management
- Standard 3.4.3 Training and development

ACT Disability Services Act 1991 Schedule 1 and 2

6 People with disabilities have the same right as other members of society to receive services in a manner that results in the least restriction of their rights and opportunities.

7 People with disabilities have the same right of pursuit of any grievance in relation to services as have other members of society. 8 People with disabilities who wish to pursue a grievance also have the right to—

- (a) adequate support to enable pursuit of the grievance; and
- (b) be able to pursue the grievance without fear of discontinuation of services or recrimination from any person or agency who may be affected by or involved in the pursuit of the grievance.

Schedule 2 Requirements to be complied with in relation to the design and implementation of programs and services relating to people with disabilities

1 Services should have as their focus the achievement of a better quality of life for people with disabilities, such as increased independence, education and employment opportunities and integration into the community.

Raising the Standard — Generic standards for continuous improvement in community service organisations

Standard 3.4.4 Work satisfaction

Standard 3.4.5 Personnel management and systems

Standard 3.4.6 Management of volunteers

Standard 3.4.7 Committee and board development

3.5 Safety and office environment

Standard 3.5.1 Safety and security

Standard 3.5.2 Productive work environment

3.6 Project development and management

Standard 3.6.1 Planning and developing projects

Standard 3.6.2 Writing project proposals to funders or sponsors

Standard 3.6.3 Managing projects

Standards - Work with clients and communities

4.1 Providing client-centred services

Standard 4.1.1 Access to services

Standard 4.1.2 Referral and entry to service

Standard 4.1.3 Assessment and service planning

Standard 4.1.4 Client-centred service delivery

Standard 4.1.5 Participation in wider community issues

Standard 4.1.6 Linkages with other organisations and groups

ACT Disability Services Act 1991 Schedule 1 and 2

- 2 Services should contribute to ensuring that the conditions of everyday life of people with disabilities are the same as, or as close as possible to, the conditions of everyday life enjoyed in the general community.
- 3 Services should be provided as part of local coordinated service systems and be integrated with services generally available to members of the community where possible.
- 4 Services should be tailored to meet the individual needs and goals of people with disabilities.
- 5 Programs and services should be designed and administered to meet the needs of people with disabilities who may experience additional disadvantage because of their sex, sexuality, ethnic origin, physical isolation or Aboriginality.
- 6 Programs and services should be designed and administered so as to promote recognition of the competence of, and enhance the image of, people with disabilities.
- 7 Programs and services should be designed and administered so as to promote the participation of people with disabilities in the life of the local community through maximum physical and social integration in that community.

Raising the Standard — Generic standards for continuous improvement in community service organisations

- Standard 4.1.7 Client records
- 4.2 Client rights and participation
- Standard 4.2.1 Client rights and responsibilities
- Standard 4.2.2 Privacy and confidentiality
- Standard 4.2.3 Client participation and feedback
- Standard 4.2.4 Client complaints
- 4.3 Community development
- Standard 4.3.1 Community development
- Standard 4.3.2 Community education and training
- 4.4 Policy development and advocacy
- Standard 4.4.1 Policy development and research
- Standard 4.4.2 Advocacy and representation
- Standard 4.4.3 Partnerships and coalitions
- 4.5 Membership services
- Standard 4.5.1 Ethical leadership and representation
- Standard 4.5.2 Serving the membership
- 4.6 Sector development
- Standard 4.6.1 Change generation and management
- Standard 4.6.2 Information, advice and support

ACT Disability Services Act 1991 Schedule 1 and 2

- 8 Programs and services should be designed and administered so as to ensure that no single organisation providing services exercises control over all or most aspects of the life of a person with disabilities. 9 Organisations providing services, whether those services are provided specifically to people with disabilities or generally to the community, should make available information from that the quality of their services can be judged.
- 10 Programs and services should be designed and administered so as to provide opportunities for people with disabilities to reach goals and enjoy lifestyles that are valued by the community generally and are appropriate to their age.
- 11 Services should be designed and administered so as to ensure that people with disabilities have access to advocacy support where necessary to ensure adequate participation in decision making about the services they receive.
- 12 Programs and services should be designed and administered so as to ensure that appropriate avenues exist for people with disabilities to raise and have resolved any grievances about services.
- 13 Services should be designed and administered so as to provide people with disabilities with, and encourage them to make use of, avenues for continuing participation in the planning and operation of services that they receive. In particular, programs and services provided to people with disabilities by the Territory and organisations should provide opportunities for consultation in relation to the development of major policy and program changes.
- 14 Programs and services should be designed and administered so as to respect the rights of people with disabilities to privacy and confidentiality.

Future directions A new quality framework is being developed for implementation.

Source: ACT 2002, Raising the Standard, A manual to guide Quality improvement In ACT community Service organisations, www.dhcs.act.gov.au/__data/assets/pdf_file/0010/5014/Intro.pdf (accessed 9 December 2009); ACT Government unpublished.

REPORT ON GOVERNMENT SERVICES 2016

Features of assurance system

quality Under the NT Disability Services Act 1993, the Minister may approve funding to a provider of services, a researcher or a person with a disability. The Minister should not approve funding unless the provider or researcher is providing services or conducting research and development in a manner which furthers the principles set out in Schedule 2 and is furthering the objectives set out in Schedule 3.

The NT Government has developed Disability Service Standards to ensure the services provided to consumers are consistent with the principles and objectives of the Northern Territory Disability Services Act. These standards are intended to apply to all services for people with disabilities provided and/or funded by government. In implementing these standards service providers are encouraged to seek feedback on the standards from service users and their families.

Service providers are required under their contractual and funding arrangements to meet service standards. Service are also reviewed by the NT Department of Health and Families.

What are the service standards

relevant NT Disability Services Act (DSA) 1993 principles and objectives

NT Disability Service Standards

Principles

The principles which are to be furthered with respect to persons with disabilities are that:

(a) persons with disabilities are individuals who have the inherent right to respect for their human worth and dignity;

Access to Services

Each person with a disability has access to the most appropriate services for his or her assessed needs and personal preferences.

Information about the nature of the services, eligibility criteria

and all related matters is readily available.

What are the relevant NT service standards

relevant NT Disability Services Act (DSA) 1993 principles and objectives

NT Disability Service Standards

- (b) persons with disabilities, whatever the origin, nature, type and degree of disability, have the same basic human rights as other members of Australian society;
- (c) persons with disabilities have the same rights as other members of Australian society to realise their individual capacities for physical, social, emotional and intellectual development;
- (d) persons with disabilities have the same right as other members of Australian society to services which will support their attaining a reasonable quality of life;
- (e) persons with disabilities have the same right as other members of Australian society to participate in decisions which affect their lives;
- (f) persons with disabilities receiving services have the same right as other members of Australian society to receive those services in a manner which results in the least restriction of their rights and opportunities;

Individual Needs

Each person with a disability will receive a service that meets, in the least restrictive way, his or her individual needs.

Valued Community Status

Each person with a disability will have the opportunity to develop and maintain skills and to participate in activities which allow him or her to achieve valued roles in the community. Consumers with challenging behaviour will receive timely, non-aversive support to develop appropriate alternative behaviours.

Decision Making and Choice

Each person with a disability is supported to fully participate in decisions about all aspects of his or her life and the services he or she receives.

NT Disability Services Act (DSA) 1993 principles and objectives

NT Disability Service Standards

(g) persons with disabilities have the same right as other members of Australian society of the pursuit of a grievance in relation to services.

Objectives

The objectives for providers of services or researchers are that: (a) the services should have as their focus, the achievement of positive outcomes for people with disabilities, such as increased independence, employment opportunities and integration into the community:

- (b) the services should contribute to ensuring that the conditions of the every-day life of people with disabilities are the same as. or as close as possible to, norms and patterns which are valued in the general community;
- (c) the services should be provided as part of the local co- Consumer Focused Service Management ordinated service systems and be integrated with services Agencies implement sound management practices that generally available to members of the community, wherever maximise consumers' quality of life. possible;
- (d) the services should be tailored to meet the individual needs and goals of the people with disabilities receiving those services;
- (e) the program or the services should be designed and administered to meet the needs of people with disabilities who experience a double disadvantage as a result of their gender, ethnic origin or Aboriginality;
- (f) the program or the services should be designed and administered to promote recognition of the competence of, and enhance the image of, people with disabilities;

Respect for Rights

Each person with a disability will receive services delivered in a manner that respects and protects their rights as outlined in the principles and objectives of the Northern Territory Disability Services Act.

Promoting Cultural and Family Relationships

Each person with a disability will receive services that recognise and support their cultural heritage and foster links with their families.

Support and Training for Support Workers and Volunteers The agency upholds management practices that value support workers and volunteers, involve them in decision-making and provide them with thorough orientation and training for all aspects of their employment or support roles.

Each of the standards has supporting standards and examples of good and poor practice in service delivery.

NT Disability Services Act (DSA) 1993 principles and objectives

- (g) the program or the services should be designed and administered to promote the participation of people with disabilities in the life of the local community through maximum physical and social integration in that community;
- (h) the program or the services should be designed and administered to ensure that no single organisation providing services exercises control over all or most aspects of the life of a person with disabilities;
- (j) the organisations or persons providing services to persons with disabilities, whether those services are provided specially to persons with disabilities or generally to members of the community, should be accountable to those persons with disabilities who use their services, advocates of those persons, the Territory and the community generally for the provision of information from which the quality of their services can be judged;
- (k) the program or the services should be designed and administered to provide opportunities for people with disabilities to reach goals and enjoy lifestyles which are valued by the community generally and are appropriate to their chronological age;
- (m) the services should be designed and administered to ensure that persons with disabilities have access to advocacy support where necessary to ensure adequate participation in decision-making about the services they receive;
- (n) the program or the services should be designed and administered to ensure that appropriate avenues exist for people with disabilities to raise and have resolved any grievances about services;

NT Disability Services Act (DSA) 1993 principles and objectives

- (p) the program or the services should be designed and administered to provide people with disabilities with, and encourage them to make use of, avenues for participating in the planning and operation of services which they receive and the Territory and organisations should provide opportunities for consultation in relation to the development of major policy and program changes;
- (q) the program or the services should be designed and administered to respect the rights of people with disabilities to privacy and confidentiality; and
- (r) the activities of the provider of services which relate to persons with disabilities should be conducted in accordance with the Principles set out in Schedule 2.

Future directions

A recent review of Disability Services in the NT has identified the need for an integrated quality management system across the NT Department of Health and Families. A new quality framework is being developed for implementation.

Source: NT Government 2009, Northern Territory Disability Services Standards, www.disabilitycentral.com.au/disAbilityCentral/pdf/standards.pdf (accessed 1 December 2009); NT Government unpublished.

REPORT ON GOVERNMENT SERVICES 2016

Features of assurance system

quality Under the Commonwealth Disability Services Act 1986, the Minister may, by legislative instrument, determine:

- (a) eligibility standards to be observed in the provision of an eligible service (including accommodation support services, print disability services, respite care services)
- (b) disability employment standards to be observed in the provision of an employment service

When the Minister determines disability employment standards the Minister must, by legislative instrument, also approve key performance indicators to be applied in assessing whether the standards have been observed.

Under the Act, the Secretary may approve an authority to grant accreditation to certification bodies. The authority must be internationally recognised as a suitable authority to grant accreditation and perform its functions in an independent and impartial way. The accredited certification body may give certificates of compliance to relevant organisations if it is satisfied that the service meets the disability employment standards. A service provider cannot receive funding (a grant) unless it is accredited (certified) or, for a new service, is seeking to be accredited, within 12 months of receiving a funding grant. If a service loses its certification and funding it needs to regain certification before funding is considered.

The Certification process is summarised as follows:

- Step 1 Start the process gather and review background information about the organisation. This helps the organisation to assess exactly what they need to consider for their certification audit. This scoping exercise is a preliminary process before the more detailed internal audit the organisation will need to undertake later as part of their preparation for certification.
- Step 2 Choose a certification body the certification body needs to have been formally accredited by JAS-ANZ to assess services against the Disability Services Standards.
- Step 3 Notify the Department a newly funded organisation needs to notify the appropriate department that they intends to obtain a Certificate of Compliance against the Disability Services Standards.
- Step 4 Conduct an internal audit Internal audits are designed to enable an organisation to assess how well they perform against the Disability Services Standards. Certification bodies may require an organisation to submit material related to an internal audit, along with policies and procedures, before they decide whether to proceed with a certification audit.

Step 5 - Prepare for certification audit — the organisation will need to prepare material, schedule activities and meetings and generally organise, in partnership with the certification body, how the certification audit will proceed.

Step 6 - Participate in certification audit — the organisation assists the certification body obtain the information it needs, as well as ensuring that the interviews and feedback sessions organised proceed as scheduled.

Step 7 - Follow-up certification audit if required — after the certification audit, the organisation receives an audit report from the certification body. The report is also be given to the funding body. For each KPI an organisation receives a rated of major nonconformity (three months to correct), nonconformity (six months to correct) or conformity. The KPI with the lowest rating under each Standard, across all service types, determines the overall rating for each Standard.

An organisation cannot be granted certification until all major nonconformities and nonconformities have been corrected, and that correction has been verified by the certification body.

Step 8 - Commence 3 year audit cycle — the 3 year audit cycle commences with a successful initial certification audit followed by a first surveillance audit 12 months later, a second surveillance audit at 24 months, and a re-assessment audit on completion of the three year period. Prior to each annual audit an internal audit is required, at which time corrective action can be taken if needed. A follow up surveillance audit may also be part of the process if issues in the annual audit which need to be rectified are identified by the certification body. Prior to the reassessment audit (3 years from certification) it is necessary to renegotiate the contract with the certification body. The 3 year audit cycle recommences with a successful reassessment audit.

service standards

What are the relevant Disability Employment Standards and Key Performance Indicators as contained in the Disability Services Standards (FaCSIA) 2007 legislative instrument. DEEWR has separate, but identical Standards - Disability Employment Standards (DEEWR) 2007.

Service access

Each person with a disability who is seeking a service has access to a service on the basis of relative need and available resources. KPI 1.1 The service provider adopts and applies non-discriminatory entry rules in respect of age, gender, race, culture, religion or disability, consistent with the contractual obligations of the service provider and the purpose of the service.

Individual needs

Each person with a disability receives a service that is designed to meet, in the least restrictive way, his or her individual needs and personal goals.

KPI 2.1 Each individual's employment goals are established objectively to reflect his or her needs and personal goals.

KPI 1.2 The service provider's entry and exit procedures are fair and equitable and consistently applied.

KPI 2.2 Each individual's employment goals are used as a basis for service provision, with the service provider undertaking a process of planning, implementation, review and adjustment to facilitate the achievement of these goals.

KPI 2.3 Services are delivered to meet each individual's employment goals through pathways and plans that do not have any unnecessary restrictions or constraints.

REPORT ON GOVERNMENT SERVICES 2016

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA)* 2007 legislative instrument

Decision making and choice

Each person with a disability has the opportunity to participate as fully as possible in making decisions about the events and activities of his or her daily life in relation to the service he or she receives.

KPI 3.1 The service provider provides appropriate and flexible opportunities for each individual to participate in decision-making at all levels, including individual choices in pre employment and employment planning, service delivery planning and corporate and business planning.

KPI 3.2 The service provider acts upon the outcomes of service recipient input into decision-making.

Privacy, dignity and confidentiality

Each service recipient's right to privacy, dignity and confidentiality in all aspects of his or her life is recognised and respected.

KPI 4.1 The service provider complies with the Information Privacy Principles of the Privacy Act 1988 in order to protect and respect the rights of individual service recipients. The service provider does not disclose personal information about service recipients without their informed consent.

KPI 4.2 The service provider promotes tolerance and respect for each service recipient's personal needs and circumstances.

Participation and integration

Each person with a disability is supported and encouraged to participate and be involved in the community.

KPI 5.1 The service contributes to individual outcomes for service recipients that progressively builds opportunities for their participation and involvement in the community through employment.

Valued status

Each person with a disability has the opportunity to develop and maintain skills and to participate in activities that enable him or her to achieve valued roles in the community.

KPI 6.1 The service promotes the belief and ability of service recipients to fulfil valued roles in the community.

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA)* 2007 legislative instrument

KPI 6.2 The service promotes employment opportunities for service recipients to fulfil valued roles in the community.

KPI 6.3 The service develops and maintains service recipients' skills relevant to their roles in the community. **Complaints and disputes**

Each service recipient is encouraged to raise, and have resolved without fear of retribution, any complaints or disputes he or she may have regarding the service provider or the service.

KPI 7.1 The service provider encourages the raising of complaints by service recipients regarding any areas of dissatisfaction with the service provider and the service.

KPI 7.2 Service recipients have no fear of retribution in raising complaints.

KPI 7.3 The service provider facilitates the resolution of complaints or disputes by service recipients regarding the service provider and the service.

Service management

Each service provider adopts quality management systems and practices that optimise outcomes for service recipients.

KPI 8.1 The service provider has management systems in place that facilitate quality management practices and continuous improvement.

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA)* 2007 legislative instrument

Employment conditions

Each person with a disability enjoys working conditions comparable to those of the general workforce.

KPI 9.1 The service provider ensures that people with a disability, placed in open or supported employment, receive wages according to the relevant Australian Pay and Classification Scale (APCS), special Federal Minimum Wage (SFMW), award, order or industrial agreement (if any). A wage must not have been reduced, or be reduced, because of award exemptions or incapacity to pay or similar reasons and, if a person is unable to work at full productive capacity due to a disability, the service provider is to ensure that a pro-rata wage based on the applicable special SFMW, APCS, award, order or industrial agreement is paid. This pro-rata wage must be determined through a transparent assessment tool or process, such as Supported Wage System (SWS), or tools that comply with the criteria referred to in the Guide to Good Practice Wage Determination including:

- compliance with relevant legislation;
- validity;
- reliability;
- · wage outcome; and
- practical application of the tool.

KPI 9.2 The service provider ensures that, when people with a disability are placed in employment, their conditions of employment are consistent with general workplace norms and relevant Commonwealth and State legislation.

KPI 9.3 The service provider ensures that, when people with a disability are placed and supported in employment, they, and if appropriate, their guardians and advocates, are informed of how wages and conditions are determined and the consequences of this.

Service recipient training and support

The employment opportunities of each person with a disability are optimised by effective and relevant training and support. KPI 10.1 The service provider provides or facilitates access to relevant training and support programs that are consistent with the employment goals and opportunities of each service recipient.

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA)* 2007 legislative instrument

Staff recruitment, employment and training

Each person employed to deliver services to a person with a disability has relevant skills and competencies.

KPI 11.1 The service provider identifies the skills and competencies of each staff member.

KPI 11.2 The service provider ensures that its staff have relevant skills and competencies.

KPI 11.3 The service provider ensures the provision of appropriate and relevant training and skills development for each staff member.

Protection of human rights and freedom from abuse

The service provider acts to prevent abuse and neglect and to uphold the legal and human rights of service recipients.

KPI 12.1 The service provider takes all practical and appropriate steps to prevent abuse and neglect of its service recipients.

KPI 12.2 The service provider upholds the legal and human rights of its service recipients.

Future directions

Development and implementation of a National Disability Advocacy Program Quality Assurance System.

- (a) Primary carers (aged 15 years or over) with a main recipient aged 0–64 years, or with a non-main recipient aged 0–64 with a profound or severe core activity limitation. See data quality statement for more details.
- (b) Estimates based on the SDAC sample who were primary carers of people, aged 0–64 years who were interviewed personally.
- (c) Only includes primary carers who reported receiving assistance from formal services to assist with their caring role in the last 6 months.
- (d) Not stated' responses on receipt and quality of formal services have been excluded from both the numerator and the denominator. Proportions have been calculated excluding these 'not stated' responses. The sample of primary carers who did not state their receipt and satisfaction with the quality of formal services received represent 25.3 per cent of all primary carers in the population. See data quality statement for more details.
- (e) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. See data quality statement for more details.
- (f) Includes inner regional, outer regional and remote. Excludes very remote and migratory. See data quality statement for further details.
 - .. Not applicable. np Not published. Nil or rounded to zero.

- (a) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 14A.152). See table 2A.48 and chapter 2 (sections 2.5-6) for more information.
- (b) For the service user data used to derive this indicator, services provided by local governments are counted as government. For 2004-05 expenditure data; NSW, Victoria, WA and SA allocated expenditure on local government services to non-government provided services. Tasmania allocated expenditure on local government services to government provided services. The ACT and the NT do not have local government provided services. Jurisdictional comparisons thus need to be undertaken with care.
- (c) Data are based on adjusted net expenditure (expenditure minus receipts) divided by the number of service users during the relevant period.

Table 14A.84 Real government expenditure per user of NDA accommodation support services (2013-14 dollars) (a), (b), (c), (d), (e), (f)

NSW (g) Vic (h) Qld (i) WA (j) SA (k) Tas (l) ACT (m) NT (n) Aust

- (d) Data for non-government provided services reflect the cost to government and not the full cost of providing the accommodation. Governments make a contribution towards non-government provided services.
- (e) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) Data for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the NDIS. For those states 2013-14 total government expenditure included 'in-kind' funding to the NDIA, but excluded 'cash' contributions. For Victoria, total government expenditure included both 'cash' and 'in-kind' funding. Care should be taken when comparing the efficiency indicators across jurisdictions and over time.
- (g) NSW data has had lower-than-average response rates, which has led to under reporting of service user numbers compared to other jurisdictions. Government and non-government sectors have not been accurately recorded in the NSW DS MDS up to 2009-10. Some non-government providers have been coded as government and this will affect the comparability of the number of service users from government and non-government sectors over time. NSW expenditure for GH includes expenditure for Other Community and the unit cost figure shown here is the average unit cost across both GH and other community clients. The increase in NSW expenditure in 2011-12 is partially the result of a change in the methodology for distributing depreciation expenditure. Cost per user of State or Territory acommodation support services in group homes for 2011-12 to 2013-14 in NSW includes services provided in other community settings.
- (h) For 2004-05, the cost per service user for non-government provided accommodation support services in institutional/residential settings is overstated due to a move towards community based and individualised settings, which was not reflected in the expenditure data. For 2010-11, data for non-government provided accommodation support services in group homes excludes capital grants.
- (i) For Queensland, improved direct attribution of expenditure to service types resulted in improved reporting of expenditure per user of government provided accommodation support services in other community settings from 2004-05 onwards and for government provided accommodation support services in group homes for 2006-07. Previous years expenditure data used to derive these results have been revised (for 2004-05 and 2005-06) as a result of improved financial data reporting capabilty. Some Government provided accommodation support services receive funding from Queensland Health, the data reported only includes funding provided by the Department of Communities.
- (j) WA service user data for 2007-08 were provided directly by WA and have not been validated by the AIHW. The revisions correct for a coding error related to users allocation to government or nongovernment services. 2012-13 data are affected by changes to the WA Procurement Reforms that commenced mid-year 2013-14. Approximately 500 service users, previously captured against respite transferred to accommodation and approximately 300 service users were transferred from "government provided accommodation support services in other community settings" to "non-government provided accommodation support services in other community settings".
- (k) For SA, the data used to derive these results have been revised for 2004-05 and 2005-06. Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (I) There are no government provided accommodation support services in institutional/residential settings in Tasmania. All government run group homes have been outsourced from 2008-09 onwards.

Table 14A.84 Real government expenditure per user of NDA accommodation support services (2013-14 dollars) (a), (b), (c), (d), (e), (f)

NSW (g) Vic (h) Qld (i) WA (j) SA (k) Tas (l) ACT (m) NT (n) Aust

- (m) In the ACT, the increase in expenditure for government provided accommodation support in group homes from 2004-05 to 2005-06 was the result of a combination of the factors including: service user information being excluded as a result of data cleansing analyses of the NMDS forms or being reclassified to 'other community settings'. The increase in expenditure for government provided accommodation support in other community settings was the result of data cleansing as some service users were not counted for this output.
- (n) There are no government provided accommodation support services or non-government provided accommodation support services in institutional/residential settings in the NT.
 - .. Not applicable. Nil or rounded to zero.

- (a) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 14A.152). See table 2A.48 and chapter 2 (sections 2.5-6) for more information.
- (b) This indicator is derived using service user data provided by the AIHW. Cost per employment service user data may differ from those reported in the Australian Government's annual report, as the Australian Government and the AIHW use different rules to count the number of employment service users. Where a person has used more than one service outlet during the reporting period, the person is counted more than once by the Australian Government, whereas the AIHW counts each person only once. In addition, the Australian Government includes independent workers in calculating service user numbers, whereas the AIHW does not.
- (c) Service user numbers used to derive these results include a small number of users of services provided by organisations classified as government related, such as local councils. The total user number for 2006-07 includes users of targeted employment services.
- (d) Total expenditure reflects only direct employment and case-based funding expenditure. It does not include expenditure on quality assurance assessment and certification payments or employer incentives such as supported wage system and wage subsidies which cannot be identified against specific user activity types.
- (e) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

⁽a) See table 14A.84 for an explanation of different methods of apportioning departmental costs.

⁽b) Data for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the NDIS. For those states 2013-14 total government expenditure included 'in-kind' funding to the NDIA, but excluded 'cash' contributions. For Victoria, total government expenditure included both 'cash' and 'in-kind' funding. Care should be taken when comparing the efficiency indicators across jurisdictions and over time.

Table 14A.88 Government administrative expenditure as a proportion of total recurrent expenditure on services (per cent) (a), (b)

NSW (c) Vic Qld (d) WA (e) SA Tas (f) ACT (g) NT Aus Gov (h) Aust

- (c) The decrease in NSW administrative expenditure as a proportion of total recurrent expenditure on services in 2008-09 and 2009-10 reflects an improved overhead allocation model which results in better allocation of funding to direct and non-direct service expenditures. The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure, which consolidated corporate services of several Government Divisions. NSW provided funding via a transfer of \$131 million (2011-12) and \$130 million (2012-13) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies.
- (d) Payroll tax data for Queensland include payroll tax, accrued payroll tax and long service leave on-costs recovered payroll tax. Payroll tax is excluded from administrative expenditure data.
- (e) The decrease in WA administrative expenditure in 2007-08 mainly reflects the abolition of the capital user charge by Department of Treasury and Finance.
- (f) In Tasmania, reduction in administrative expenditure for 2009-10 was due to improved processes for aligning administrative and direct service delivery expenditure. From 2012-13 to 2014-15, administrative expenditure varied due to changes in methodology for allocation of corporate and divisional overheads.
- (g) In the ACT, in 2006-07, administrative expenditure was impacted by the centralisation of some administrative services.
- (h) Australian Government administrative expenditure is an attribution of cost based on average staffing levels.
- (i) Includes actual payroll tax for the NT. Actual payroll tax, for NSW is included for 2005-06–2007-08, for Victoria is included in part, for 2005-06 to 2007-08 and then in full from 2008-09 to 2012-13, for SA in part for 2006-07 and then in full for 2007-08 to 2012-13, for Tasmania from 2005-06 to 2011-12 and in part for 2012-13, for Queensland from 2005-06 to 2013-14.

Source: Australian, State and Territory governments (unpublished).

Employment rate									
People with a profound/severe core activity limitation (c)	84.9	86.3	83.1	89.1	86.5	85.2	89.7	89.7	85.6
People without a profound/severe core activity limitation (d)	94.1	94.5	93.9	95.3	94.2	93.6	96.4	94.7	94.3

- (a) The ABS 2011 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the SDAC and the ABS disability module. The ASSNP is conceptually comparable with the SDAC and ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics). It is likely that the reduction is at the less severe end of the profound or severe core activity limitation population. As such, these data will differ from those of previous years.
- (b) For people aged 15–64 years.
- (c) People who have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).
- (d) People who do not have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

Source: ABS (unpublished), 2011 Census of Population and Housing.

- (a) For people aged 15-64 years, living in households.
- (b) Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care.
- (c) A person has a restriction if he/she has difficulty participating in life situations, needs assistance from another person or uses an aid. A long term condition is defined as a disease or disorder which has lasted or is likely to last for at least six months; or a disease, disorder or event (e.g. stroke, poisoning, accident etc.) which produces an impairment or restriction which has lasted or is likely to last for at least six months. Long-term conditions have been coded to a classification based on the Australian Standard Classification of Education (ASCED), 2001 (cat. no. 1272.0).
- (d) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (e) Cells in the table have been randomly adjusted to avoid the release of confidential data.
 - Nil or rounded to zero. **np** Not published.

- (a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care.
- (b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent \pm X per cent).
- (c) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom and the United States of America.
- (d) Non-English speaking countries includes those persons for whom country of birth was inadequately described. Non-English speaking countries include Zimbabwe for 2012.
- (e) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.
- (f) Non–English speaking countries includes those persons for whom country of birth was inadequately described.

- (a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.
- (b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
 np Not published.

⁽a) Primary carers (aged 15 years or over) with a main recipient aged 0-64 years, or with a non-main recipient aged 0-64 with a profound or severe core activity limitation.

⁽b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent \pm X per cent).

⁽c) Includes primary carers who had not previously received assistance but reported needing assistance.stated' responses.

⁽d) Includes primary carers with a main recipient of care aged 65 years and over who also care for a non-main recipient aged 0-64 years with a profound or severe core activity

Table 14A.112 Proportion of primary carers (carers of people with disability aged 0-64 years) who report a need for further assistance in their caring roles, by main recipient of care age group, by State/Territory, 2009 ('000) (a), (b)

⁽a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.

Source: ABS (unpublished and TableBuilder) Survey of Disability, Ageing and Carers 2003, 2009 and 2012.

⁽b) For people aged 5-64 years, living in households.

⁽c) For 2009 the rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

⁽d) For the 2003 ABS Survey of Disability, Ageing and Carers, the sample in the NT was reduced to a level such that NT records contributed appropriately to national estimates but could not support reliable estimates for the NT. As a result, estimates for the NT are not published separately.

⁽e) Confidence intervals are not available for 2003 data.

⁽f) Includes church/special community activities and voluntary work (including advocacy).

⁽g) Totals may be less than the sum of the components as a person might have participated in more than one activity.

⁽h) Includes other activity not specified elsewhere, voluntary activities, other special interest group activities, art/craft group activity and performing Arts group activity.

⁻ Nil or rounded to zero. **np** Not published.

Table 14A.116 People with disability aged 15–64 years who have had face-to-face contact with ex-household family or friends in the previous week, all with reported disability, by country of birth, by State/Territory ('000) (a), (b), (c)

(a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates

- with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.
- (b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (c) Persons living in households.
- (d) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom and the United States of America.
- (e) Non-English speaking countries includes those persons for whom country of birth was inadequately described. Non-English speaking countries include Zimbabwe for 2012.
- (f) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.
- (g) Non-English speaking countries includes those persons for whom country of birth was inadequately described.
 - Nil or rounded to zero. **np** Not published.

- (a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.
- (b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (c) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom and the United States of America.
- (d) Non-English speaking countries includes those persons for whom country of birth was inadequately described. Non-English speaking countries include Zimbabwe for 2012.
- (e) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.
- (f) Non–English speaking countries includes those persons for whom country of birth was inadequately described.
 - Nil or rounded to zero. np Not published.

People without a profound/severe core activity limitation (d)	16.9	17.8	18.9	16.9	19.5	19.7	9.8	34.8	17.9

⁽a) The ABS 2011 and 2006 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). The ASSNP is conceptually comparable with the SDAC and ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).

Source: ABS (unpublished), Census of Population and Housing 2006 and 2011.

⁽b) For people aged 15–64 years.

⁽c) People who have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

⁽d) People who do not have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

No need for assistance with a core activity limitation	6.7	6.9	6.1	6.0	6.4	5.2	11.2	4.4	6.6

⁽a) The ABS 2011 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the ABS disability module. The ASSNP is conceptually comparable with the ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).

Source: ABS (unpublished), Census of Population and Housing 2011.

⁽b) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.

Table 14A.140 Participation in education and training, by disability status, 2009 (per cent) (a), (b), (c)

NSW Vic Qld WA SA Tas ACT NT Aust

- (a) Due to differences in collection methodology, the data collected by the ABS Disability Module (used in the Survey of Education and Training Experience) relate to a broader 'disability and long-term health condition' population than the 'disability' population obtained from the much more detailed Survey of Disability, Ageing and Carers however, the characteristics of the populations are similar. The data are suitable for population comparisons, but not for prevalence updates between Disability, Ageing and Carers surveys.
- (b) Data in Italics indicates a RSE of between 25 per cent and 50 per cent. Data with RSEs over 50 per cent are not published (np).
- (c) The education and training participation rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
 - Nil or rounded to zero. **np** Not published.

⁽a) The ABS 2011 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the ABS disability module. The ASSNP is conceptually comparable with the ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).

Source: ABS (unpublished), 2011 Census of Population and Housing.

⁽b) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.

⁽c) For people aged 15–64 years.

⁽a) Due to differences in collection methodology, the data collected by the ABS Disability Module (used in the Survey of Education and Training Experience) relate to a broader 'disability and long-term health condition' population than the 'disability' population obtained from the much more detailed Survey of Disability, Ageing and Carers — however, the characteristics of the populations are similar. The data are suitable for population comparisons, but not for prevalence updates between Disability, Ageing and Carers surveys.

Source: ABS (unpublished), Survey of Education and Training Experience.

⁽b) Data in Italics indicates a RSE of between 25 per cent and 50 per cent.

⁽c) The education and training attainment rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

⁽d) For people aged 15–64 years.

- (a) Reports provisional BCC data that have not been validated and may be subject to revision.
- (b) The proportion of BCC funded agencies that submitted HACC MDS data differed across jurisdictions and ranged from 93 per cent to 100 per cent in 2011-12, 51 per cent to 100 per cent in 2012-13, 75 per cent to 100 per cent in 2013-14 and 75 per cent to 100 per cent in 2014-15. Actual client numbers may be higher than those reported here.
- (c) The proportion of BCC clients with an unknown or invalid date of birth differed across jurisdictions and ranged from 0.3 per cent to 2.0 per cent. Nationally, the proportion of BCC clients with an unknown or invalid date of birth was 0.9 per cent.
- (d) Data for Australia for 2012-13 is not comparable to previous years due to the inclusion of data for Victoria and WA.
- (e) Allied Health Care includes at Home and at Centre.
- (f) Nursing Care includes at Home and at Centre.
- (g) Goods and Equipment levels for WA may be under-reported due to a data submission error.
- (h) A processing error resulted in some instances of assistance being excluded for 2014–15. This varied by assistance type: 11.1 per cent for respite care, 5.0 per cent for counselling/support/information/advocacy, 3.4 per cent for assessments, 3.0 per cent for social support and less than 3.0 per cent for each of the other assistance types. Data will be revised for the 2017 RoGS.
 - Nil or rounded to zero. na Not available

⁽a) Reports provisional BCC data that has not been validated and may be subject to revision.

⁽b) The proportion of BCC funded agencies that submitted HACC MDS data differed across jurisdictions and ranged from 93 per cent to 100 per cent in 2011-12, 51 per cent to 100 per cent in 2012-13, 75 per cent to 100 per cent in 2013-14 and 75 per cent to 100 per cent in 2014-15. Actual client numbers may be higher than those reported here.

Table 14A.147 Basic community care services received within remote areas by people aged under 65 years and Indigenous Australians aged under 50 years (a), (b), (c)

Unit NSW Vic Qld WA SA Tas ACT NT Aust (d)

- (c) The proportion of BCC clients with an unknown or invalid date of birth differed across jurisdictions and ranged from 0.3 per cent to 2.0 per cent. Nationally, the proportion of BCC clients with an unknown or invalid date of birth was 0.9 per cent.
- (d) Data for Australia for 2012-13 is not comparable to previous years due to the inclusion of data for Victoria and WA.
- (e) Allied Health Care includes at Home and at Centre.
- (f) Nursing Care includes at Home and at Centre.
- (g) Goods and Equipment levels for WA may be under-reported due to a data submission error.
- (h) A processing error resulted in some instances of assistance being excluded for 2014–15. This varied by assistance type: 11.1 per cent for respite care, 5.0 per cent for counselling/support/information/advocacy, 3.4 per centfor assessments, 3.0 per cent for social support and less than 3.0 per cent for each of the other assistance types. Data will be revised for the 2017 RoGS.

Data quality information — Services for people with disability, chapter 14

Data Quality Information

Data quality information (DQI) provide information against the seven Australian Bureau of Statistics (ABS) data quality framework dimensions, for a selection of performance indicators in the Services for people with disability chapter.

Technical DQI has been supplied or agreed by relevant data providers. Additional Steering Committee commentary does not necessarily reflect the views of data providers.

DQI are available for the following performance indicators:

Access to NDA specialist disability services	2
Service use by severity of disability	8
Service use by special needs groups	14
Service use by special needs groups – Aboriginal and Torres Strait Islander people	20
Assistance for younger people with disability in residential aged care	26
Labour force participation and employment of people with disability	29
Client and carer satisfaction	31
Labour force participation of primary carers of people with	
disability	35
Social participation of people with disability	39

Access to NDA specialist disability services

Data quality information for this indicator has been sourced from the Australian Institute of Health and Welfare (AIHW) with additional Steering Committee comments.

Indicator definition and description

Element

Equity — access.

Indicators

Access to NDA specialist disability services.

Measure (computation)

1. Numerator: Number of users of specialist disability services (all ages) in the

reporting period.

2. Denominator: Estimated potential population for specialist disability services on

30 June at start of reporting period.

The potential population is defined as people aged 0–64 years with the potential to require disability support services. For more information on the potential population,

see Section 14.7 Definition of key terms: 'Potential population'.

3. Percentage: $R/N \times 100$ where R = number of service users (all ages) in the DS NMDS during the reporting period and N = estimated potential population on 30 June

at the start of the reporting period.

Performance indicators for disability services provided by the Australian Government (disability employment services only) are restricted to the age range 15–64 years.

Data source/s

Numerator: Disability Services National Minimum Data Set (DS NMDS). For general issues relating to the DS NMDS, refer to the DS NMDS data quality statement on the

AIHW website.

Denominator: 2009 and 2012 Survey of Disability Ageing and Carers (SDAC), 2011 Census of Population and Housing (Census 2011), Estimated Resident Population (ERP) and Indigenous Population Projections.

Data Quality Framework Dimensions

Institutional environment

AIHW

The AIHW is a major national agency set up by the Australian Government under the *Australian Institute of Health and Welfare Act 1987* to provide reliable, regular and relevant information and statistics on Australia's health and welfare. It is an independent corporate Commonwealth entity established in 1987, governed by a management Board, and accountable to the Australian Parliament through the Health portfolio. More information about the AIHW is available on the AIHW website.

When errors are found in published data, those errors are corrected immediately in publications on the AIHW website, and where necessary, in online tables and online interactive data cubes. Corrections are documented on the AIHW website.

DS NMDS/CSTDA

All states and territories and the Australian Government Department of Social Services (DSS) supply data on the disability services provided under the National Disability Agreement (NDA) to the AIHW annually. These are compiled into the DS NMDS. (The DS NMDS' name was changed, from the Commonwealth–State/Territory Disability Agreement National Minimum Dataset (CSTDA NMDS), on 1 January 2009.) Service providers collate data in relation to each of their service type outlets providing services under the NDA, as well as the service users who access these outlets. A limited number of data items are provided by government agencies. Government agencies compile, edit and verify the data, and supply a final data set to the AIHW for further verification, national collation and analysis.

The set of privacy and data principles for the DS NMDS/CSTDA NMDS collection are outlined in the Data Guide, the most recent version of which is available on the AIHW website

All State and Territory governments and the Australian Government are required to provide data annually for the DS NMDS, and are responsible for the quality and timeliness of the data.

ABS

For information on the institutional environment of the ABS, including the legislative

obligations of the ABS, please see ABS Institutional Environment.

DSS Disability Employment Services (DES) collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving DMS.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information

Data from several different sources, each referencing different time periods, are used to produce data:

- the CSTDA NMDS 2008-09 and earlier
- the DS NMDS 2009-10 and later
- the Home and Community Care Minimum Dataset (HACC MDS)
- the DSS DES collection
- the 2009 and 2012 SDAC
- · ABS ERP at 30 June
- the 2011 Census
- · ABS Indigenous Population Projections.

For instance, tables for 2013-14 referenced DS NMDS for 2013-14, the 2009 and 2012 SDAC, ERP June 2013, the 2011 Census and 30 June 2013 Indigenous population projections. This may reduce the overall accuracy of the estimates.

SDAC 2009 and 2012

Data from the SDAC do not cover very remote areas or Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age—sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008, 2013 and 2014 rates.

The use of national level SDAC 2009 and 2012 age—sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and remoteness area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS NMDS/CSTDA

DS NMDS data are generated by processes that deliver services to people (as were CSTDA NMDS data). It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including Employment Support Services (ESS) data) except DMS data, which is collected from the DSS DES collection. The 2008–09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. The 2009–10 and later years DS NMDS include services provided under the NDA during each of those years.

Data collected in the DS NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by State and Territory, remoteness area, demographic characteristics, support needs, broad service groups and service types

Relevance

are available.

The scope of services varied in terms of programs that were provided under the NDA across jurisdictions. In particular, the provision of specialist psychiatric disability and early childhood intervention services differed across states and territories. As well, in Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data are interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see Disability support services: services provided under the NDA 2013–14 (AIHW 2015a).

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2013–14, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.2 per cent of the total number of service user records in each jurisdiction. In 2012–13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys was recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt—in' approach. All other states and territories follow an 'opt—out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS' general funding allocation.

Data collected in the DES collection include the State/Territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years 2008–09 to 2013–14. The source data that becomes available at the latest date is the DS NMDS data. This is typically published 12-15 months after the end of the reference year, e.g. the 2013–14 report was released on 17 June 2015.

HACC MDS data is provided to the AIHW before publication for the current reporting year (for the 2016 report this is 2014–15). The latest HACC statistical report to be published is Home and Community Care Program Minimum Data Set: 2013–14 Annual Bulletin (DSS 2015).

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Census TableBuilder, from which Census 2011 Need For Assistance data were extracted, was released in 2013.

ERP data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011 Census for estimates from September 1991 to June 2011. These rebased/recast estimates have been used in calculation of the potential population for all years to June 2011, and the latest available ERP has been used for years from June 2012.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

DS/CSTDA NMDS

Potential sources of error in the DS NMDS (and the CSTDA NMDS before it) are data items for which the response is not stated or not collected. If the characteristics of the people for whom the information is not available are different to those people for whom information is reported, there is potential for bias to be introduced into the data.

The DS NMDS aims to provide complete national data on all services provided under the NDA, service type outlets and service users each year. The national response rate for service type outlets is based on the number of service type outlets that responded out of the total number of funded outlets in each jurisdiction (98.0 per cent in 2013–14 and 2012–13). It is not possible to calculate a national response rate for service users, as some outlets do not report on all service users due to administrative or other error. In addition, some service types are not required to report service user information.

'Not stated/not collected' rates for individual data items varied substantially across items and jurisdictions.

The 2008–09 CSTDA NMDS data was initially confirmed by State/Territory and Australian Government agencies in July 2010. Some coding errors were subsequently identified and, following National Disability Information Management Group (NDIMG) endorsement in March 2011, revisions were made to the data set. The revised data set was used to produce the 2008–09 performance indicators in this report. The 2009–10 DS NMDS data confirmed by State/Territory and Australian Government agencies in March 2011 were used to produce 2009–10 performance indicators. Coding errors advised subsequently were reported in Disability support services: Report on services provided under the NDA 2009–10 (AIHW 2011).

In response to concerns expressed by some jurisdictions, changes were made to the DS NMDS/CSTDA NMDS processing rules in 2010. These changes were to be effective for the 2008–09 NMDS and future collections. The changes involve no longer attempting to match records with either missing sex or an estimated date of birth with existing records within the same year's data or previous years' DS NMDS data. The matching process provided a means by which these not stated or estimated values could be updated based on other records that, given their high match in other items, were assumed to represent the same service user. By no longer performing these functions these records now stand alone, thereby increasing slightly the number of unique service users within the DS/CSTDA NMDS.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the relative standard error (RSE), is estimated below for the age–sex specific potential population rates.

Estimated RSE for age-sex potential population rates at national level (per cent)

	General population	potential	Respite care population	potential	DES/Open Employment population	potential
Age group (years)	Male	Female	Male	Female	Male	Female
0–9	8.2	9.7	10.8	15.3	na	na
10–14	9.3	15.0	13.9	18.2	na	na
15–24	8.9	11.3	13.6	15.4	6.7	7.5
25-34	11.7	12.0	24.3	24.9	6.8	5.9

50–54	18.1	15.2	30.4	23.6	6.6	5.4
55–64	10.3	7.9	14.3	16.9	3.5	3.0

na Not applicable.

Source: ABS (unpublished) Disability, Ageing and Carers, 2012.

DSS DES collection (source of DMS numerators)

The quality of DMS data are enhanced using the Employment Services System, in three ways:

- the Employment Services System is used for all services provided by Employment Provider Agencies, not just DES users, which improves the quality of DMS data as missing or conflicting data can be resolved by comparison with data from other programs
- information is linked with Centrelink data for the purposes of determining eligibility for payments, and this provides another opportunity to complete missing information and correct errors
- it is a condition of provision of services that a client provide complete and correct information.

As a result, information presented on DMS data has negligible missing values.

Information on users is derived from data on episodes of assistance over the course of the reference year. Individuals' multiple episodes are linked by means of a linkage key called the Job Seeker ID. When a potential user contacts a Provider Agency for assistance, information including name, address and date of birth is used to match them to previous episodes of assistance.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about 2011 Census data items can be found on the ABS website.

See also ABS data quality statements.

The DS/CSTDA NMDS consists of a set of nationally significant data items that are collected in all jurisdictions (State/Territory and Australian Government) and an agreed method of collection and transmission. Data items and definitions have remained consistent each year since the launch of the redeveloped national collection in 2002

Data items are largely based on national community services data standards to enable comparability between collections. Items are also designed to be comparable with other major collections such as the SDAC and international standards including the World Health Organization's International Classification of Functioning and Disability (ICF). More information about the design and comparability of CSTDA NMDS data items is given in the AIHW publication Australia's national disability services data collection: Redeveloping the Commonwealth—state/territory disability agreement National Minimum Data Set. These data items were largely unchanged in the transition to the DS NMDS.

From 1 October 2008, targeted support services previously delivered by the Australian Government and included in the service group 'employment services' were transferred to State/Territory governments and thus recorded as State/Territory delivered disability support services. Targeted support services delivered by the Australian Government are not included in the NDA performance indicators.

As detailed in the 'Relevance' and 'Timeliness' sections, there are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues such as rates of service use greater than 100 per cent.

The potential population for specialist disability services does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities —

Coherence

for example, with working or education.

Accessibility

DS/CSTDA NMDS

The AIHW provides a variety of products that draw upon the DS NMDS/CSTDA NMDS. Published products available on the AIHW website are:

- Disability support services: services provided under the National Disability Agreement (AIHW various) (annual report/bulletin): These publications are available for free download from the AIHW website
- Interactive disability data cubes: These contain subsets of national information from the 1999 NMDS onwards, which allow people to construct data tables online according to their needs
- Australia's Welfare (AIHW 2015b) (biennial report)
- Ad hoc data are available on request (charges apply to recover costs)
- METeOR online metadata repository
- National Community Services Data Dictionary 2014 (AIHW 2014).

DS NMDS data are used for service planning and monitoring in individual jurisdictions, and for reporting national performance indicators. Performance indicators formed part of the accountability measures under the third CSTDA, and were published annually as part of the FaHCSIA publication Commonwealth State/Territory Disability Agreement annual public report. The AIHW also released supporting web publications which included these indicator tables in more detail, and these are available on the AIHW website.

ABS

The ABS website provides information and data on the ERP, Census Need for Assistance and information on disability recorded in the SDAC. Detailed data extractions are available through the National Information Referral Service (cost–recovery applies).

Interpretability

Supporting information on the quality and use of the DS/CSTDA NMDS are published annually in *Disability support services: services provided under the National Disability Agreement* (AIHW various) available in hard copy or on the AIHW website As well, the annual *Disability Services National Minimum Data Set: data guide, June 2015* (AIHW 2015). and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- The potential population is not measured for 30 June of each year for which rates are presented. To account for this, the potential population has been estimated using several data sources. This estimation is based on several key assumptions. It assumes that the age—sex distribution of the potential population changes constantly from the 2009 SDDAC to the 2012 SDAC. It also assumes that national age—sex specific rates of the potential population in SDAC are the same as rates for each of the states and territories. The extent to which the change in age-sex-specific rates varies, and the extent of variation in State/Territory rates differ from national rates, has not been measured.
- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined (though comparable) populations and different data sources.

Service use by severity of disability

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments

Indicator definition and description

Element

Equity — access.

Indicators

Service use by severity of disability.

Measure (computation)

1. Numerator: Number of users of specialist disability services (all ages) in the reporting period.

reporting period.

2. Denominator: Estimated potential population for specialist disability services on

30 June at start of reporting period.

The potential population is defined as people aged 0–64 years with the potential to require disability support services. For more information on the potential population, see Section 14.7 Definition of key terms: 'Potential population'.

3. Percentage: $R/N \times 100$ where R = number of service users (all ages) in the DS NMDS during the reporting period and N = estimated potential population on 30 June at the start of the reporting period.

Performance indicators for disability services provided by the Australian Government (disability employment services only) are restricted to the age range 15–64 years.

Data source/s

Numerator: DS NMDS. For general issues relating to the DS NMDS, refer to the

DS NMDS data quality statement on the AIHW website.

Denominator: AIHW calculation of potential population from SDAC, Census, ERP and Indigenous Population Projections (see ABS data quality statements).

Data Quality Framework Dimensions

Institutional environment

AIHW

The AIHW is a major national agency set up by the Australian Government under the *Australian Institute of Health and Welfare Act 1987* to provide reliable, regular and relevant information and statistics on Australia's health and welfare. It is an independent corporate Commonwealth entity established in 1987, governed by a management Board, and accountable to the Australian Parliament through the Health portfolio. More information about the AIHW is available on the AIHW website.

When errors are found in published data, those errors are corrected immediately in publications on the AIHW website, and where necessary, in online tables and online interactive data cubes. Corrections are documented on the AIHW website.

DS NMDS/CSTDA NMDS

All states and territories and the Australian Government DSS supply data on the disability services provided under the NDA to the AIHW annually. These are compiled into the DS NMDS. (The DS NMDS' name was changed, from the Commonwealth—State/Territory Disability Agreement National Minimum Dataset (CSTDA NMDS), on 1 January 2009.) Service providers collate data in relation to each of their service type outlets providing services under the NDA, as well as the service users who access these outlets. A limited number of data items are provided by government agencies. Government agencies compile, edit and verify the data, and supply a final data set to the AIHW for further verification, national collation and analysis.

The set of privacy and data principles for the DS NMDS/CSTDA NMDS collection are outlined in the Data Guide, the most recent version of which is available on the AIHW website.

All State and Territory governments and the Australian Government are required to provide data annually for the DS NMDS, and are responsible for the quality and timeliness of the data.

ABS

For information on the institutional environment of the ABS, including the legislative obligations of the ABS, please see ABS Institutional Environment.

DSS DES collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving Disability Management Services.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information.

Data from several different sources, each referencing different time periods, are used to produce data.

- the CSTDA NMDS 2008–09 and earlier
- the DS NMDS 2009–10 and later
- the HACC MDS
- the DSS DES collection
- the 2009 and 2012 SDAC
- ABS ERP at 30 June
- the 2011 Census
- ABS Indigenous Population Projections.

For instance, tables for 2013–14 referenced DS NMDS for 2013–14, the 2009 and 2012 SDAC, ERP June 2013, the 2011 Census and 30 June 2013 Indigenous population projections. This may reduce the overall accuracy of the estimates.

SDAC 2009 and 2012

Data from the SDAC do not cover very remote areas or Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age—sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008, 2013 and 2014 rates.

The use of national level SDAC 2012 age—sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and remoteness area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS NMDS/CSTDA NMDS

DS NMDS data are generated by processes that deliver services to people (as were CSTDA NMDS data). It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES collection. The 2008–09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. The 2009-10, and later year DS NMDS include services provided under the NDA during each of these years.

Data collected in the DS NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by State and Territory, remoteness area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the NDA across jurisdictions. In particular, the provision of specialist psychiatric disability and early childhood intervention services differed across states and territories. As well, in

Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data are interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see *Disability support services: services provided under the National Disability Agreement 2013–14—Appendix* (AIHW 2015)

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2013–14, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.2 per cent of the total number of service user records in each jurisdiction. In 2012–13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys was recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt—in' approach. All other states and territories follow an 'opt—out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS' general funding allocation.

Data collected in the DES collection include the State/Territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years from 2008–09 to 2013–14. The source data that becomes available at the latest date is the DS/CSTDA NMDS data. This is typically published 12-15 months after the end of the reference year, e.g. the 2013–14 report was released on 17 June 2015.

HACC MDS data is provided to the AIHW before publication for the current reporting year (for the 2016 report this is 2014–15). However, the latest HACC statistical report to be published is *Home and Community Care Program Minimum Data Set: 2013–14 Annual Bulletin* (DSS 2015).

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013. Census TableBuilder, from which Census 2011 Need For Assistance data were extracted, was released in 2013.

ERP data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011

Census for estimates from September 1991 to June 2011. These rebased/recast estimates have been used in calculation of the potential population for all years to June 2011, and the latest available ERP has been used for years from June 2012.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

DS NMDS/CSTDA NMDS

Potential sources of error in the DS NMDS (and the CSTDA NMDS before it) are data items for which the response is not stated or not collected. If the characteristics of the people for whom the information is not available are different to those people for whom information is reported, there is potential for bias to be introduced into the data.

The DS NMDS aims to provide complete national data on all services provided under the NDA, service type outlets and service users each year. The national response rate for service type outlets is based on the number of service type outlets that responded out of the total number of funded outlets in each jurisdiction (98.0 per cent in 2013–14 and 98.0 per cent in 2012–13). It is not possible to calculate a national response rate for service users, as some outlets do not report on all service users due to administrative or other error. In addition, some service types are not required to report service user information.

'Not stated/not collected' rates for individual data items varied substantially across items and jurisdictions.

The 2008–09 CSTDA NMDS data was initially confirmed by State/Territory and Australian Government agencies in July 2010. Some coding errors were subsequently identified and, following National Disability Information Management Group (NDIMG) endorsement in March 2011, revisions were made to the data set. The revised data set was used to produce the 2008–09 performance indicators in this report. The 2009-10 DS NMDS data confirmed by State/Territory and Australian Government agencies in March 2011 were used to produce 2009-10 performance indicators. Coding errors advised subsequently were reported in *Disability support services* 2009-10 (AIHW 2011).

In response to concerns expressed by some jurisdictions, changes were made to the DS NMDS/CSTDA NMDS processing rules in 2010. These changes were to be effective for the 2008–09 NMDS and future collections. The changes involve no longer attempting to match records with either missing sex or an estimated date of birth with existing records within the same year's data or previous years' DS NMDS data. The matching process provided a means by which these not stated or estimated values could be updated based on other records that, given their high match in other items, were assumed to represent the same service user. By no longer performing these functions these records now stand alone, thereby increasing slightly the number of unique service users within the DS/CSTDA NMDS.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the RSE, is estimated below for the age–sex specific potential population rates.

Estimated RSE for age-sex potential population rates at national level (per cent)

	General population	potential	Respite care population	potential	DES/Open Employment population	potential
Age group (years)	Male	Female	Male	Female	Male	Female
0–9	8.2	9.7	10.8	15.3	na	na
10–14	9.3	15.0	13.9	18.2	na	na
15–24	8.9	11.3	13.6	15.4	6.7	7.5
25-34	11.7	12.0	24.3	24.9	6.8	5.9
35-44	13.6	11.7	21.4	24.6	5.5	5.9
45-49	15.3	17.4	28.9	46.1	6.1	6.0
50-54	18.1	15.2	30.4	23.6	6.6	5.4
55–64	10.3	7.9	14.3	16.9	3.5	3.0

na Not applicable.

Source: ABS (unpublished) Disability, Ageing and Carers, 2012.

DSS DES collection (source of DMS numerators)

The quality of DMS data are enhanced using the Employment Services System, in three ways:

- The Employment Services System is used for all services provided by Employment Provider Agencies, not just DES users, which improves the quality of DMS data as missing or conflicting data can be resolved by comparison with data from other programs
- Information is linked with Centrelink data for the purposes of determining eligibility for payments, and this provides another opportunity to complete missing information and correct errors
- It is a condition of provision of services that a client provide complete and correct information.

As a result, information presented on DMS data has negligible missing values.

Information on users is derived from data on episodes of assistance over the course of the reference year. Individuals' multiple episodes are linked by means of a linkage key called the Job Seeker ID. When a potential user contacts a Provider Agency for assistance, information including name, address and date of birth is used to match them to previous episodes of assistance.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available.

Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about 2011 Census data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DS/CSTDA NMDS consists of a set of nationally significant data items that are collected in all jurisdictions (State/Territory and Australian Government) and an agreed method of collection and transmission. Data items and definitions have remained consistent each year since the launch of the redeveloped national collection in 2002.

Data items are largely based on national community services data standards to enable comparability between collections. Items are also designed to be comparable with other major collections such as the SDAC and international standards including the World Health Organization's International Classification of Functioning and Disability (ICF). More information about the design and comparability of CSTDA NMDS data items is given in the AIHW publication Australia's national disability services data collection: Redeveloping the Commonwealth—state/territory disability agreement National Minimum Data Set. These data items were largely unchanged in the transition to the DS NMDS.

From 1 October 2008, targeted support services previously delivered by the Australian Government and included in the service group 'employment services' were transferred to State/Territory governments and thus recorded as State/Territory delivered disability support services. Targeted support services delivered by the Australian Government are not included in the NDA performance indicators.

As detailed in the 'Relevance' and 'Timeliness' sections, there are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues such as rates of service use greater than 100 per cent.

The potential population for specialist disability services does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities — for example, with working or education.

Accessibility

DS NMDS/CSTDA NMDS

The AIHW provides a variety of products that draw upon the DS NMDS/CSTDA NMDS. Published products available on the AIHW website are:

- Disability support services: services provided under the National Disability Agreement (AIHW various) (annual report/bulletin): These publications are available for free download from the AIHW website
- Interactive disability data cubes: These contain subsets of national information from the 1999 NMDS onwards, which allow people to construct data tables online according to their needs
- Australia's Welfare (AIHW 2015b) (biennial report)
- Ad hoc data are available on request (charges apply to recover costs)
- METeOR online metadata repository
- National Community Services Data Dictionary 2014 (AIHW 2014).

DS NMDS data are used for service planning and monitoring in individual jurisdictions, and for reporting national performance indicators. Performance indicators formed part of the accountability measures under the third CSTDA, and were published annually as part of the FaHCSIA publication Commonwealth State/Territory Disability Agreement annual public report. The AIHW also released supporting web publications which included these indicator tables in more detail, and these are available on the AIHW website.

ABS

The ABS website provides information and data on the ERP, Census Need for Assistance and information on disability recorded in the SDAC. Detailed data extractions are available through the National Information Referral Service (cost–recovery applies).

Interpretability

Supporting information on the quality and use of the DS/CSTDA NMDS are published annually in *Disability support services: services provided under the National Disability Agreement* (AIHW various) available in hard copy or on the AIHW website As well, the annual *Disability Services National Minimum Data Set: data guide, June 2015* (AIHW 2015). and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/

The Steering Committee notes the following key data gaps/issues:

- The DS NMDS includes information on 'Activity and participation life area', which indicates whether users need assistance with activities of daily living, activities of independent living or activities of work, education and community living. These data are collected in a matrix, where how often a user needs help is collected at the same time as whether they need help with these activities. The concept of severity of need for assistance more closely aligns with data on how often help is needed. However, information presented for this measure is of whether users need assistance with these activities. For future reports, consideration should be given to using information on how often help is needed.
- The potential population is not measured for 30 June of each year for which rates are presented. To account for this, the potential population has been estimated using several data sources. This estimation is based on several key assumptions. It assumes that the age—sex distribution of the potential population changes constantly from the 2009 SDDAC to the 2012 SDAC. It also assumes that national age—sex specific rates of the potential population in SDAC are the same as rates for each of the states and territories. The extent to which the change in age-sex-specific rates varies, and the extent of variation in State/Territory rates differ from national rates, has not been measured.
- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined (though comparable) populations and different data sources.

Service use by special needs groups

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments

Indicator definition and description

DSS DES collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving Disability Management Services.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information.

Data from several different sources, each referencing different time periods, are used to produce data.

- the CSTDA NMDS 2008–09 and earlier
- the DS NMDS 2009-10 and later
- the HACC MDS
- · the DSS DES collection
- the 2009 and 2012 SDAC
- ABS ERP at 30 June
- the 2011 Census
- ABS Indigenous Population Projections.

For instance, tables for 2013–14 referenced DS NMDS for 2013–14, the 2009 and 2012 SDAC, ERP June 2013, the 2011 Census and 30 June 2013 Indigenous population projections. This may reduce the overall accuracy of the estimates.

SDAC 2009 and 2012

Data from the SDAC do not cover very remote areas or Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age—sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008, 2013 and 2014 rates.

The use of national level SDAC 2009 and 2012 age—sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and remoteness area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS NMDS/CSTDA NMDS

DS NMDS data are generated by processes that deliver services to people (as were CSTDA NMDS data). It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES collection. The 2008–09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. The 2009-10 and later year DS NMDS include services provided under the NDA during each of those years.

Data collected in the DS NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by State and Territory, remoteness area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the NDA across jurisdictions. In particular, the provision of specialist psychiatric disability and early childhood intervention services differed across states and territories. As well, in

Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data are interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see *Disability support services: services provided under the National Disability Agreement 2013–14—Appendix* (AIHW 2015)

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2013–14, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.2 per cent of the total number of service user records in each jurisdiction. In 2012–13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys was recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt—in' approach. All other states and territories follow an 'opt—out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS' general funding allocation.

Data collected in the DES collection include the State/Territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years from 2008–09 to 2013–14. The source data that becomes available at the latest date is the DS NMDS data. This is typically published 12-15 months after the end of the reference year, e.g. the 2013–14 report was released on 17 June 2015.

HACC MDS data is provided to the AIHW before publication for the current reporting year (for the 2016 report this is 2014–15). The latest HACC statistical report to be published is *Home and Community Care Program Minimum Data Set: 2013–14 Annual Bulletin* (DSS 2015).

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Census TableBuilder, from which Census 2011 Need For Assistance data were extracted, was released in 2013.

ERP data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011

Census for estimates from September 1991 to June 2011. These rebased/recast estimates have been used in calculation of the potential population for all years to June 2011, and the latest available ERP has been used for years from June 2012.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

DS NMDS/CSTDA NMDS

Potential sources of error in the DS NMDS (and the CSTDA NMDS before it) are data items for which the response is not stated or not collected. If the characteristics of the people for whom the information is not available are different to those people for whom information is reported, there is potential for bias to be introduced into the data.

The DS NMDS aims to provide complete national data on all services provided under the NDA, service type outlets and service users each year. The national response rate for service type outlets is based on the number of service type outlets that responded out of the total number of funded outlets in each jurisdiction (98.0 per cent in 2013–14 and 2012–13). It is not possible to calculate a national response rate for service users, as some outlets do not report on all service users due to administrative or other error. In addition, some service types are not required to report service user information.

'Not stated/not collected' rates for individual data items varied substantially across items and jurisdictions.

The 2008–09 CSTDA NMDS data was initially confirmed by State/Territory and Australian Government agencies in July 2010. Some coding errors were subsequently identified and, following National Disability Information Management Group (NDIMG) endorsement in March 2011, revisions were made to the data set. The revised data set was used to produce the 2008–09 performance indicators in this report. The 2009-10 DS NMDS data confirmed by State/Territory and Australian Government agencies in March 2011 were used to produce 2009-10 performance indicators. Coding errors advised subsequently were reported in *Disability support services: Report on services provided under the National Disability Agreement 2009-10* (AIHW 2011).

In response to concerns expressed by some jurisdictions, changes were made to the DS NMDS/CSTDA NMDS processing rules in 2010. These changes were to be effective for the 2008–09 NMDS and future collections. The changes involve no longer attempting to match records with either missing sex or an estimated date of birth with existing records within the same year's data or previous years' DS NMDS data. The matching process provided a means by which these not stated or estimated values could be updated based on other records that, given their high match in other items, were assumed to represent the same service user. By no longer performing these functions these records now stand alone, thereby increasing slightly the number of unique service users within the DS/CSTDA NMDS.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the RSE, is estimated below for the age–sex specific potential population rates.

Estimated RSE for age-sex potential population rates at national level (per cent)

	General population	Potential	Respite care population	potential	DES/Open Employment population	potential
Age group (years)	Male	Female	Male	Female	Male	Female
0–9	8.2	9.7	10.8	15.3	na	na
10–14	9.3	15.0	13.9	18.2	na	na
15–24	8.9	11.3	13.6	15.4	6.7	7.5
25-34	11.7	12.0	24.3	24.9	6.8	5.9
35–44	13.6	11.7	21.4	24.6	5.5	5.9
45–49	15.3	17.4	28.9	46.1	6.1	6.0
50-54	18.1	15.2	30.4	23.6	6.6	5.4
55–64	10.3	7.9	14.3	16.9	3.5	3.0

na Not applicable.

Source: ABS (unpublished) Disability, Ageing and Carers, 2012.

DSS DES collection (source of DMS numerators)

The quality of DMS data are enhanced using the Employment Services System, in three ways:

- The Employment Services System is used for all services provided by Employment Provider Agencies, not just DES users, which improves the quality of DMS data as missing or conflicting data can be resolved by comparison with data from other programs
- Information is linked with Centrelink data for the purposes of determining eligibility for payments, and this provides another opportunity to complete missing information and correct errors
- It is a condition of provision of services that a client provide complete and correct information.

As a result, information presented on DMS data has negligible missing values.

Information on users is derived from data on episodes of assistance over the course of the reference year. Individuals' multiple episodes are linked by means of a linkage key called the Job Seeker ID. When a potential user contacts a Provider Agency for assistance, information including name, address and date of birth is used to match them to previous episodes of assistance.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about 2011 Census data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DS/CSTDA NMDS consists of a set of nationally significant data items that are collected in all jurisdictions (State/Territory and Australian Government) and an agreed method of collection and transmission. Data items and definitions have remained consistent each year since the launch of the redeveloped national collection in 2002.

Data items are largely based on national community services data standards to enable comparability between collections. Items are also designed to be comparable with other major collections such as the SDAC and international standards including the World Health Organization's International Classification of Functioning and Disability (ICF). More information about the design and comparability of CSTDA NMDS data items is given in the AIHW publication Australia's national disability services data collection: Redeveloping the Commonwealth—state/territory disability agreement National Minimum Data Set. These data items were largely unchanged in the transition to the DS NMDS.

From 1 October 2008, targeted support services previously delivered by the Australian Government and included in the service group 'employment services' were transferred to State/Territory governments and thus recorded as State/Territory delivered disability support services. Targeted support services delivered by the Australian Government are not included in the NDA performance indicators.

As detailed in the 'Relevance' and 'Timeliness' sections, there are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues such as rates of service use greater than 100 per cent.

The potential population for specialist disability services does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities — for example, with working or education.

Accessibility

DS NMDS/CSTDA NMDS

The AIHW provides a variety of products that draw upon the DS NMDS/CSTDA NMDS. Published products available on the AIHW website are:

- Disability support services: services provided under the National Disability Agreement (AIHW various) (annual report/bulletin): These publications are available for free download from the AIHW website
- Interactive disability data cubes: These contain subsets of national information from the 1999 NMDS onwards, which allow people to construct data tables online according to their needs
- Australia's Welfare (AIHW 2015b) (biennial report)
- Ad hoc data are available on request (charges apply to recover costs)
- METeOR online metadata repository
- National Community Services Data Dictionary 2014 (AIHW 2014).

DS NMDS data are used for service planning and monitoring in individual jurisdictions, and for reporting national performance indicators. Performance indicators formed part of the accountability measures under the third CSTDA, and were published annually as part of the FaHCSIA publication Commonwealth State/Territory Disability Agreement annual public report. The AIHW also released supporting web publications which included these indicator tables in more detail, and these are available on the AIHW website.

ABS

The ABS website provides information and data on the ERP, Census Need for Assistance and information on disability recorded in the SDAC. Detailed data extractions are available through the National Information Referral Service (cost–recovery applies).

Interpretability

Supporting information on the quality and use of the DS/CSTDA NMDS are published annually in *Disability support services: services provided under the National Disability Agreement* (AIHW various) available in hard copy or on the AIHW website As well, the annual *Disability Services National Minimum Data Set: data guide, June 2015* (AIHW 2015). and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/

The Steering Committee notes the following key data gaps/issues:

- The potential population is not measured for 30 June of each year for which rates are presented. To account for this, the potential population has been estimated using several data sources. This estimation is based on several key assumptions. It assumes that the age—sex distribution of the potential population changes constantly from the 2009 SDDAC to the 2012 SDAC. It also assumes that national age—sex specific rates of the potential population in SDAC are the same as rates for each of the states and territories. The extent to which the change in age-sex-specific rates varies, and the extent of variation in State/Territory rates differ from national rates, has not been measured.
- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined (though comparable) populations and different data sources.

Service use by special needs groups – Aboriginal and Torres Strait Islander people

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments.

Indicator definition and description

Element

Equity - access.

Indicator Measure (computation) Service use by special needs groups – Aboriginal and Torres Strait Islander people.

1. Numerator: Number of Aboriginal and Torres Strait Islander people (0–64 years) who used specialist disability services in the reporting period.

2. Denominator: Estimated Indigenous potential population for disability services aged 0–64 years on 30 June at start of reporting period.

The potential population is defined as people aged 0–64 years with the potential to require disability support services. For more information on the potential population, see Section 14.7 Definition of key terms: 'Potential population'.3. Percentage: $R/N \times 100$ where R = number of Aboriginal and Torres Strait Islander people (all ages) who used specialist disability services in the reporting period and N = estimated Indigenous potential population aged 0–64 years on 30 June at start of reporting period

Performance Indicators reporting on disability services funded by the Australian Government (employment services only) are restricted to the age range 15–64 years and not stated age.

Data source/s

Numerator: DS NMDS. For general issues relating to the DS NMDS, refer to the DS NMDS data quality statement on the AIHW website.

Denominator: 2009 and 2012 SDAC, 2011 Census of Population and Housing

(Census 2011), ERP and Indigenous Population Projections.

Data Quality Framework Dimensions

Institutional environment

AIHW

The AIHW is a major national agency set up by the Australian Government under the *Australian Institute of Health and Welfare Act 1987* to provide reliable, regular and relevant information and statistics on Australia's health and welfare. It is an independent corporate Commonwealth entity established in 1987, governed by a management Board, and accountable to the Australian Parliament through the Health portfolio. More information about the AIHW is available on the AIHW website.

When errors are found in published data, those errors are corrected immediately in publications on the AIHW website, and where necessary, in online tables and online interactive data cubes. Corrections are documented on the AIHW website.

DS NMDS/CSTDA NMDS

All states and territories and the Australian Government DSS supply data on the disability services provided under the NDA to the AlHW annually. These are compiled into the DS NMDS. (The DS NMDS' name was changed, from the Commonwealth—State/Territory Disability Agreement National Minimum Dataset (CSTDA NMDS), on 1 January 2009.) Service providers collate data in relation to each of their service type outlets providing services under the NDA, as well as the service users who access these outlets. A limited number of data items are provided by government agencies. Government agencies compile, edit and verify the data, and supply a final data set to the AlHW for further verification, national collation and analysis.

The set of privacy and data principles for the DS NMDS/CSTDA NMDS collection are outlined in the Data Guide, the most recent version of which is available on the AIHW website.

All State and Territory governments and the Australian Government are required to provide data annually for the DS NMDS, and are responsible for the quality and timeliness of the data.

ABS

For information on the institutional environment of the ABS, including the legislative

obligations of the ABS, please see ABS Institutional Environment.

DSS Disability Employment Services (DES) collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving DMS.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information.

Data from several different sources, each referencing different time periods, are used to produce data:

- the CSTDA NMDS 2008–09 and earlier
- the DS NMDS 2009–10 and later
- the Home and Community Care Minimum Dataset (HACC MDS)
- the DSS DES collection
- the 2009 and 2012 SDAC
- ABS ERP at 30 June
- the 2011 Census
- ABS Indigenous Population Projections.

For instance, tables for 2013–14 referenced DS NMDS for 2013–14, the 2009 and 2012 SDAC, ERP June 2013, the 2011 Census and 30 June 2013 Indigenous population projections. This may reduce the overall accuracy of the estimates.

- The Indigenous status data item from the SDAC 2009 and 2012 is not usable for the purposes of calculating the Indigenous potential population, so a rate ratio adjustment, calculated from information from the Census, is made to the national all person age—sex specific rates, as detailed in the Measure section. The use of these adjustments assumes consistency between the rate ratio as calculated from Census information, and the corresponding information if it were collected from the SDAC 2009 and 2012. Two particular points of note with regards to this assumption are:
 - Information from Census 2011 about people with need for assistance with core activities is based on the self–enumeration of four questions (except in Aboriginal and Torres Strait Islander communities, where people were interviewed), whereas people are defined as being in the potential population in SDAC 2009 and 2012 on the basis of a comprehensive interviewer–administered module of questions, and thus the two populations are different, although they are conceptually related.
 - ABS research indicates that the Aboriginal and Torres Strait Islander identification rate differs between the Census and interviewer administered surveys.
- The cultural appropriateness for Aboriginal and Torres Strait Islander people of data collection instruments designed for the total population is not known; nor is it known how this, combined with different data collection methods, impacts on the accuracy of the estimated Indigenous potential population used in this indicator.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC 2009 and 2012 on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and remoteness area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS NMDS/CSTDA NMDS

DS NMDS/CSTDA NMDS data are generated by processes that deliver services to people (as were CSTDA NMDS data). It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS NMDS collects data about specialist disability support services according to

Relevance

nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES collection. The 2008–09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. Later years' DS NMDS include services provided under the NDA.

Data collected in the DS NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by State and Territory, remoteness area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the NDA across jurisdictions. In particular, the provision of specialist psychiatric disability differed across states and territories. As well, in Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data is interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see *Disability support services: services provided under the National Disability Agreement 2013–14—Appendix* (AIHW 2015a).

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In2013–14, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.2 per cent of the total number of service user records in each jurisdiction. In 2012–13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys was recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt—in' approach. All other states and territories follow an 'opt—out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS's general funding allocation.

Data collected in the DES collection include the State/Territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years from 2008–09 to 2013–14. The source data that becomes available at the latest date is the DS NMDS data. This is typically published 12-15 months after the end of the reference year, e.g. the 2013–14 report was released on 17 June 2015.

HACC MDS data is provided to the AIHW before publication for the current reporting year (for the 2016 report this is 2014–15). The latest HACC statistical report to be published is *Home and Community Care Program Minimum Data Set: 2013–14 Annual Bulletin* (DSS 2015).

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC is used to provide prevalence rates of people in the potential population. Results for the 2012 SDAC were released on 13 November 2013.

Census TableBuilder, from which Census 2011 Need For Assistance data were extracted, was released in 2013.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

A potential source of error in the DS NMDS is not stated or uncollected Indigenous status. For example in 2013–14, the not stated/not collected rate varied across jurisdictions from a low rate of zero for Australian Government agencies, to a high rate of 10.4 per cent for Victorian agencies; the overall rate being 3.7 per cent. See the accompanying appendix for further details. Not stated or not collected Indigenous status may introduce bias into the results affecting both the accuracy of estimates and the comparability of estimates across jurisdictions. In addition, a coding audit of the Indigenous status data item has not been undertaken, thus the accuracy of the rate of Indigenous identification in the DS NMDS is not known.

For general issues relating to the DS NMDS, refer to the DS NMDS data quality information.

As SDAC is a sample survey, estimates are subject to sampling variability. A measure of the sampling variability, the RSE per cent, was estimated for the age–sex specific rates of the potential population and can be found in the Accuracy section of the Access to NDA specialist disability services data quality information.

The cultural appropriateness for Aboriginal and Torres Strait Islander people of data collection instruments designed for the total population is not known. Poor cultural sensitivity of data collection instruments is a potential source of non–sampling error which affects the accuracy of Indigenous potential population estimates. The size of this error, if present, has not been measured.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced.

In particular for Indigenous estimates, undercounting of Aboriginal and Torres Strait Islander Australians may introduce bias into the results which would affect the comparability of estimates across jurisdictions. The net Census undercount for all Aboriginal and Torres Strait Islander Australians was estimated at 11.5 per cent, calculated as the difference between the Census count and estimated Aboriginal and Torres Strait Islander population on Census night. Estimates of the Aboriginal and Torres Strait Islander net undercount for all jurisdictions are included below.

Estimated Aboriginal and Torres Strait Islander net Census undercount

Jurisdiction	Undercount rate (per cent)
NSW	16
Vic	19
Qld	17
WA	18
SA	20
Tas	18
ACT	17
NT	15

Source: ABS Cat. no. 3238.0.55.001

Accuracy

Quality statements about Census 2011 data items can be found on the ABS website.
Disability support services: services provided under the National Disability Agreement (AIHW various) (annual report/bulletin): These publications are available for free download from the AIHW website

- specific rates varies, and the extent of variation in State/Territory rates differ from national rates, has not been measured.
- The use of 2011 Census data to adjust underlying age—sex specific rates the potential population to account for the higher level of disability among Aboriginal and Torres Strait Islander Australians involves mixing self—report data from a relatively simple instrument for measuring need for assistance with sample survey data collected by trained interviewers using a comprehensive survey instrument. The cultural appropriateness for Aboriginal and Torres Strait Islander people of data collection instruments designed for the total population is not known; nor is it known how this, combined with different data collection methods, impacts on the accuracy of the estimated Indigenous potential population used in this indicator
- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations (though comparable) and different data sources.

Assistance for younger people with disability in residential aged care

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments

Indicator definition and description

Element

Equity – access.

Indicator

Assistance for younger people with disability in residential aged care.

Measure (computation)

1. Numerator: Number of people with disability aged 0-64 years in residential aged care assisted with more appropriate forms of accommodation, diversionary strategies and/or enhanced services.

Measure (1): Percentage change in the number of people aged 0–64 years (and Aboriginal and Torres Strait Islander Australians aged 0–49 years) in residential aged care

Measure (2): The proportion of service users (people aged 0–64 years and Aboriginal and Torres Strait Islander Australians aged 0–49 years) in the Younger People in Residential Aged Care program (YPIRAC) who have achieved program objectives since its inception.

2. Denominator: Measure (1): Estimated potential population for specialist disability services on 30 June at the start of the reporting period.

The potential population is defined as people aged 0–64 years with the potential to require disability support services. For more information on the potential population, see Section 14.7 Definition of key terms: 'Potential population'.

3. Rate: For measure (1): $R/N \times 10~000$ where R = number of younger people with disability aged 0–64 years admitted to permanent residential aged care in the reporting period and N = estimated potential population on 30 June at the start of the reporting period.

Data source/s

Numerator: Australian Government DSS Aged Care Data Warehouse. The Aged Care Data Warehouse is a consolidated data warehouse of service, approved–provider and service recipient data.

Denominator: 2009 and 2012 SDAC, 2011 Census, ERP and Indigenous Population Projections.

Data Quality Framework Dimensions

Institutional environment

Approved providers of residential and community care submit data to Medicare Australia to claim subsidies from the Australian Government. These data are provided to the DSS to administer services under the *Aged Care Act 1997* and the Aged Care Principles. Data for the numerator of this benchmark were prepared by the DSS. The AIHW did not have all of the relevant datasets required to independently verify the data tables for this indicator.

The AIHW is a major national agency set up by the Australian Government under the *Australian Institute of Health and Welfare Act 1987* to provide reliable, regular and relevant information and statistics on Australia's health and welfare. It is an independent corporate Commonwealth entity established in 1987, governed by a management Board, and accountable to the Australian Parliament through the Health portfolio. More information about the AIHW is available on the AIHW website.

For information on the institutional environment of the ABS, including the legislative obligations of the ABS, please see ABS Institutional Environment.

Relevance

Data from several different sources, each referencing different time periods, are used to produce this performance indicator. Data used are from:

- DSS Aged Care Data Warehouse
- the 2009 and 2012 SDAC
- ABS ERP at 30 June (various years)
- the 2011 Census

• ABS Indigenous Population Projections (various years).

SDAC 2009 and 2012

Data from the SDAC 2009 and 2012 do not cover very remote areas or Aboriginal and Torres Strait Islander communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age-sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008, 2013 and 2014 rates.

The use of national level SDAC 2009 and 2012 age-sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self-enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and remoteness area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

The DSS Aged Care Data Warehouse

The Ageing and Aged Care data warehouse is a consolidated data warehouse of service provider and service recipient data held by the Ageing and Aged Care Division and the Office of Aged Care Quality and Compliance of the DSS.

Performance measures are provided from 2008-09 to 2014-15.

DSS Aged Care Data Warehouse: Claims are submitted by approved providers on a monthly basis for services delivered under residential age care. Data for the previous financial year are available in October each year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Census TableBuilder, from which Census 2011 Need For Assistance data were extracted, was released in 2013.

ERP data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011 Census for estimates from September 1991 to June 2011. These rebased/recast estimates have been used in calculation of the potential population for all years to June 2011, and the latest available ERP has been used for years from June 2012.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

The DSS Aged Care Data Warehouse

The DSS aged care data used to calculate the numerator of this benchmark are from an administrative data collection designed for payment of subsidies to service providers and the collation of accurate information on the number and location of funded aged care places.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the RSE, is estimated below for the age-sex specific potential population rates.

Estimated RSE for age-sex potential population rates at national level (per cent)

	<u> </u>		.,
Age group (years)	Male	Female	
8.2	9.7	8.2	
9.3	15.0	9.3	
8.9	11.3	8.9	
11.7	12.0	11.7	
13.6	11.7	13.6	

Timeliness

Accuracy

15.3	17.4	15.3
18.1	15.2	18.1
10.3	7.9	10.3

Source: Disability, Ageing and Carers, 2012 unpublished data

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from Census 2011 data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about Census 2011 data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DSS aged care data used to construct the numerator of this benchmark are consistent and comparable over time. There are issues with the consistency of the numerator and denominator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues.

The potential population for specialist disability services does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities — for example, with working or education.

Accessibility

Information on definitions used in the DSS Aged Care Data Warehouse is available in the *Aged Care Act 1997* and Aged Care Principles, and in The Residential Aged Care Manual 2009

The ABS website provides information and data on the ERP, Census Need for Assistance, Indigenous population projections and the SDAC. Detailed data extractions are available through the National Information Referral Service (cost–recovery applies).

Interpretability

Aggregated data can be obtained on request from the DSS.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- The data used to measure the number of younger people in residential aged care
 are from an administrative data collection designed for payment of subsidies to
 service providers and have accurate data on the number and location of funded
 aged care places
- The potential population is not measured for 30 June of each year for which rates are presented. To account for this, the potential population has been estimated using several data sources. This estimation is based on several key assumptions. It assumes that the age—sex distribution of the potential population changes constantly from the 2009 SDDAC to the 2012 SDAC. It also assumes that national age—sex specific rates of the potential population in SDAC are the same as rates for each of the states and territories. The extent to which the change in age-sex-specific rates varies, and the extent of variation in State/Territory rates differ from national rates, has not been measured.
- There are issues with the consistency of the numerator and denominator for this performance benchmark, as the numerator and denominator are drawn from differently defined (though comparable) populations and different data sources

Labour force participation and employment of people with disability

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (data supplied by ABS)

Indicator definition and description

Element Equity (Outcomes) — Labour force participation rate for people with disability aged

15-64 years.

Indicator Labour force participation and employment of people with disability.

Measure Numerator: Number of people with disability aged 15–64 years who are in the labour

(computation) force (employed or unemployed).

Denominator: Total number of persons with disability aged 15–64 years.

Data source/s The numerator and denominator for this indicator are drawn from the ABS 2012

Survey of Disability, Ageing and Carers (SDAC).

Data Quality Framework Dimensions

Institutional environment

SDAC data are collected, processed, and published by the ABS. The ABS operates within the framework of the Census and Statistics Act 1905 and the *Australian Bureau* of Statistics Act 1975. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents.

For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS energines, places and ABS institutional Environment.

ABS operations, please see ABS Institutional Environment.

Relevance

The SDAC contains the most comprehensive and accurate measure of disability produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and severity of any restrictions.

Labour force participation data are collected in the SDAC using the ABS standard 'minimum set' of questions to produce estimates of the current economically active population. Aggregates produced from these questions are designed to be consistent with international concepts of employment and unemployment.

Timeliness

The SDAC is conducted every three years over an approximate six month period. Results from the 2009 survey were released in April 2011. The results from the 2012 survey were released in November 2013.

Accuracy

Sample and Response Rate:

The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1000 health establishments and 500 other non-private dwellings.

The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.

Scope and Coverage:

Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the NT has a significant proportion of the population in very remote areas and/or Aboriginal and Torres Strait Islander Communities. As such it is important to interpret NT estimates in light of these areas being excluded from scope.

For the first time in 2012, SDAC has excluded a small number of private dwellings that

are in Collection Districts where the population contribution of an Aboriginal and Torres Strait Islander Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on NT estimates, as around 10 per cent of NT households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non–sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012.

For SDAC data, the confidence interval for each estimate and proportion have been supplied. Where an estimate or proportion has a confidence interval above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the confidence interval is not published.

The SDAC collect a range of demographic, financial and other information that can be analysed in conjunction with the disability status and labour force participation rate of respondents.

The labour force information collected in SDAC is designed to be comparable with data collected in the monthly Labour Force Survey and other surveys.

See publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no.4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality Declaration.

Interpretability Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals. The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012 on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Coherence

Accessibility

Client and carer satisfaction

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (ABS data) with additional Steering Committee comments.

Indicator definition and description

Element Effectiveness – Quality – Client and carer perceptions

Indicator Client and carer satisfaction

Measure (computation)

Client satisfaction — the proportion of people with disability who are satisfied with the quality of assistance received from organised and formal services in the last six months

Numerator: number of people aged 15–64 years with disability who report being satisfied with the quality of formal services they have received, for all activities they receive assistance with

Denominator: number of people aged 15–64 years, who were personally interviewed and reported receiving formal assistance for at least one activity and/or who report needing formal assistance with at least one activity

Carer satisfaction — the proportion of primary carers of people with disability who are satisfied with the quality of assistance received from formal services, by the person with disability and by the carer in the last six months

Numerator: number of primary carers (of people aged 0–64 years) who report being satisfied with the quality of formal services received to help them in their caring role *Denominator:* number of primary carers (of people aged 0–64 years) who were interviewed personally and reported receiving formal assistance in their caring role in the previous 6 months

Data source/s

The numerator and denominator for this indicator are drawn from the Survey of Disability, Ageing and Carers (SDAC).

Data Quality Framework Dimensions

Institutional environment

The SDAC is collected, processed, and published by the ABS. The ABS operates within the framework of the *Census and Statistics Act* 1905 and the *Australian Bureau of Statistics Act* 1975. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents.

For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.

Relevance

Client satisfaction:

The SDAC contains the most comprehensive and accurate measure of disability produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and severity of any restrictions.

Data on satisfaction with the quality of the formal services they have received was collected for the first time in the 2012 SDAC.

Carer satisfaction:

The SDAC collects information about primary carers and non-primary carers of people with disability.

A primary carer is a person who provides the most assistance that is informal in nature, in terms of help or supervision, to a person with one or more of the core activities of mobility, self-care or communication. The assistance has to be ongoing, or likely to be ongoing, for at least six months. In this survey, primary carers only include people aged 15 years and over. People aged 15 to 17 years were only interviewed personally if parental permission was granted.

People who confirm they are the primary carer of a person with disability are asked about the assistance they provide, the assistance they can call on, and their employment experience. They are also asked to complete a self-enumeration form

which collects information about their attitudes to, and experience of, their caring role. Where the carer has more than one recipient of care, the information collected in the personal interview and self–enumeration form is in regard to the person receiving the most help or supervision from him/her (the main recipient of care).

The scope of primary carers are primary carers with a main recipient of care aged: 0–64 years, or 65 years and over, but only where the carer is also caring for someone aged 0–64 years who lives with the carer and the recipient aged 0–64 years has a profound or severe core activity limitation

As age and disability status are collected or derived from information provided in interviews with the responsible adult and/or the recipient of care, these data items are only available for recipients of care (other than the main recipient of care) where the recipient lives with the carer. Therefore, the data may exclude some primary carers who would otherwise be in–scope if age and disability status information was available for all their recipients of care.

Data are available for primary carers only.

In the SDAC self-enumeration form, primary carers are asked a series of questions about the assistance they receive from organised services:

- whether received assistance from any organised services in the last month
- satisfaction with quality of assistance received from these organised services (e.g. with regard to timeliness and appropriateness of the service).

The primary carer population for both the numerator and denominator excludes:

- people who did not receive formal assistance in their caring role in the previous 6 months
- primary carers who did not state their receipt and satisfaction with the quality of formal services received on the self-enumeration form
- primary carers who were not interviewed personally (ie by proxy).

The ABS conducts the SDAC every three years. The most recent SDAC was conducted from August 2012 to March 2013.

Sample and Response Rate:

The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings.

The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.

Scope and Coverage:

Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the NT has a significant proportion of the population in very remote areas and/or Aboriginal and Torres Strait Islander Communities and therefore NT estimates should be interpreted with care.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Aboriginal and Torres Strait Islander Community exceeds 75 per cent within the CD, but the private dwellings are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on NT estimates, as around 10 per cent of NT households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0). The RSE for each estimate and proportion have been supplied. Where

Timeliness

Accuracy

an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has a RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.

In addition, in a very small number of instances, an estimate is provided but the proportion has not been published, due to the impact of perturbation.

'Not-stated' responses for self-enumerated data items relating to caring:

In the 2012 SDAC some of the data items relating to caring which were self–enumerated by primary carers had moderately high levels of not stated responses (approximately 25 per cent of the estimated population of primary carers). This introduces the potential for non–response bias if those who did respond were inherently different to the total population of primary carers. However, analysis showed there were no substantial differences between primary carers who responded and all primary carers on the following characteristics: sex, age, remoteness and country of birth. For more information on non–response rates for this indicator see the explanatory notes section of Disability, Ageing and Carers, Australia: Additional data cubes, 2012 (cat. no. 4430.0.55.009).

Coherence

The SDAC collects a range of information such as disability status, main health condition, use of aids, patient experience etc, that can be analysed in conjunction with these measures.

Carer satisfaction:

Both the numerator and the denominator are drawn from the same dataset, with the numerator being a subset of the denominator population.

Estimates of primary carers in a particular population group presented in these tables may not match estimates for primary carers in the same population group presented in other indicators.

The particular specification of the in–scope primary carer population for this indicator represents only 54 per cent of the primary carer population identified in the SDAC, and therefore comparisons with other published information on primary carers sourced from the SDAC should be made with caution. Mostly, the primary carers that are out–of–scope are not included because they are not caring for someone aged 0–64 years.

The Explanatory Notes section of Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) provides more detailed information on the differences between the SDAC over time.

Accessibility

See publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality Declaration.

Interpretability

Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals.

The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder

Additional Information

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- The SDAC is planned to be conducted every three years (guaranteed to 2018).
- For SDAC estimates and proportions with RSEs greater than 50 per cent, the ABS has supressed the RSE and 95 per cent confidence intervals (CI) as these are considered too unreliable for general use.
- The size of the SEs means that SDAC data may not be adequate for measuring change over time. Small year to year movements may be difficult to detect if the size of the SEs is large compared to the size of the difference between estimates.
- Disaggregation of this indicator by Aboriginal and Torres Strait Islander status is a high priority.

Labour force participation of primary carers of people with disability

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (data supplied by ABS).

Indicator definition and description

Element Equity (Outcomes) — Labour force participation rate for carers aged 15-64 of people

with disability.

Labour force participation of primary carers of people with disability. Indicator

Numerator: Number of carers aged 15–64 years (carers of people aged 0–64 years Measure

(computation) with disability) who are in the labour force (employed or unemployed).

Denominator: Total number of carers (carers of people aged 0-64 years with a

disability) aged 15-64 years.

Data source/s The numerator and denominator for this indicator are drawn from the ABS 2012

Survey of Disability, Ageing and Carers (SDAC).

Data Quality Framework Dimensions

Institutional environment SDAC data are collected, processed, and published by the ABS. The ABS operates within the framework of the Census and Statistics Act 1905 and the Australian Bureau of Statistics Act 1975. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents.

For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.

Relevance

The SDAC collects information about primary carers and non-primary carers of people with disabilities.

Tables for this indicator are presented for two groups of carers - 'primary carers' and 'all carers' (primary and non-primary carers combined) - with a third population group ('non-carers') included for comparison purposes.

SDAC Definitions of primary carers and carers:

A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more of the core activities of mobility, self-care or communication. The assistance has to be ongoing, or likely to be ongoing, for at least six months. In this survey, primary carers only include persons aged 15 years and over. Persons aged 15 to 17 years were only interviewed personally if parental permission was granted.

Where the primary carer has more than one recipient of care, the main recipient of care is the one receiving the most help or supervision. A sole recipient is also classed as a main recipient.

More generally, a carer is a person of any age who provides any informal assistance, in terms of help or supervision, to persons with disabilities or long-term health conditions or persons who are elderly (i.e. aged 65 years or over). The assistance has to be ongoing, or likely to be ongoing, for at least six months. Assistance to a person in a different household related to 'everyday activities', without specific information on the activities. Where the care recipient lives in the same household, the assistance is for one or more of the following core and non-core activities:

- · cognition/emotion
- communication
- health care
- · household chores
- meal preparation
- mobility
- property maintenance
- · reading or writing
- self-care
- · transport.

Definitions used in this indicator:

The scope of primary carers for these indicators are primary carers with a main recipient of care aged:

- 0-64 years, or
- 65 years and over, but only where the carer is also caring for someone aged 0–64 years who lives with the carer and the recipient aged 0–64 years has a profound or severe core activity limitation.

The scope of 'all carers' for these indicators are primary carers as specified above, and non–primary carers of co–resident recipients of care aged 0–64 years. As these data pertain to carers of recipients aged 0–64 years, carers (including primary carers) who only provide care to persons aged 65 years and over have been excluded.

As age and disability status are collected or derived from information provided in interviews with the responsible adult and/or the recipient of care, these data items are only available for recipients of care (other than, for primary carers, the main recipient of care) where the recipient lives with the carer. Therefore, the data may exclude some carers who would otherwise be in–scope if age and disability status information was available for all their recipients of care.

'Non-carers' consist of people not identified in the SDAC as having a caring role to people of any age.

Labour force, employment and unemployment:

Labour force participation data are collected in the SDAC using the ABS standard 'minimum set' of questions to produce estimates of the current economically active population. Aggregates produced from these questions are designed to be consistent with international concepts of employment and unemployment.

Underemployment:

A person is considered underemployed if they: are employed, usually work 34 hours or less per week, would like a job with more hours, and are available to start work with more hours if offered a job in the next four weeks.

In the SDAC, the definition of 'underemployed' excludes persons employed full-time who worked only part-time hours in the reference week for economic reasons (eg: through being stood down or due to insufficient work available).

Age Restriction:

All tables for this indicator are restricted to people aged 15-64 years.

Timeliness

The ABS conducts the SDAC every three years. The most recent SDAC was conducted from August 2012 to March 2013. Results from the 2012 survey were released in November 2013.

Accuracy

Sample and Response Rate:

The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings.

The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non–response.

Scope and Coverage:

Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the NT has a significant proportion of the population in very remote areas and/or Aboriginal and Torres Strait Islander Communities. As such it is important to interpret NT estimates in light of these areas being excluded from scope.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Aboriginal and Torres Strait Islander Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on NT estimates, as

around 10 per cent of NT households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The RSEs for each estimate and proportion have been supplied. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has a RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.

In addition, in a very small number of instances, an estimate is provided but the proportion has not been published, due to the impact of perturbation.

The SDAC collects a range of demographic, financial and other information that can be analysed in conjunction with the labour force participation rate of carers of persons with disability.

The labour force information collected in SDAC is designed to be comparable with data collected in the monthly Labour Force Survey and other surveys. The exception is the definition of underemployment which excludes persons employed full–time who worked only part–time hours in the reference week for economic reasons (eg: through being stood down or due to insufficient work available). This information is not collected on the ABS standard 'minimum set' of labour force questions.

Both the numerator and the denominator are drawn from the same dataset, with the numerator being a subset of the denominator population. The denominator population is the same in all applicable tables (either total persons or total labour force, aged 15–64 years).

Estimates of primary carers in a particular population group presented in these tables may not match estimates for primary carers in the same population group presented in other NDA indicators.

The particular specification of the in–scope carer population for this indicator represents only 56 per cent of the carer population (aged 15–64 years), and 66 per cent of the primary carer population (aged 15–64 years) identified in the SDAC. Therefore comparisons with other published information on carers and primary carers sourced from the SDAC should be made with caution.

The sum of 'all carers' and 'non-carers' in these tables will not provide the total population aged 15-64 years as the tables exclude completely the remaining 44 per cent of carers (aged 15-64 years) identified in the SDAC who are out-of-scope for this indicator. Mostly, these carers are out-of-scope because they are not caring for someone aged 0-64 years.

The Explanatory Notes section of Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) provides more detailed information on the differences between the SDAC over time.

See publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no.4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality

Declaration. Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals.

The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Coherence

Accessibility

Interpretability

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012 on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Social participation of people with disability

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (data supplied by ABS)

Indicator definition and description

Element Equity (Outcomes) — Social participation of people with disability in social and

community activities.

Indicator Various — Social participation of people with disability.

Measure Numerator: Number of people with disability who had face—to—face contact with family (computation) or friends who don't live with them in the previous week (15–64 years), or travelled to

or friends who don't live with them in the previous week (15–64 years), or travelled to a social activity in the last two weeks (5–64 years), or reported the main reason they couldn't leave home as often as they would like was their own disability or medical

condition (5-64 years).

Denominator: Total number of persons with disability aged 15-64 years and total

number of persons with disability aged 5–64 years.

Data source/s The numerator and denominator for this indicator are drawn from the ABS 2012

Survey of Disability, Ageing and Carers (SDAC).

Data Quality Framework Dimensions

Institutional SDAC data are collected, processed, and published by the ABS. The ABS operates environment within the framework of the *Census and Statistics Act 1905* and the *Australian Bureau*

of Statistics Act 1975. These ensure the independence and impartiality of the ABS,

and the confidentiality of respondents.

For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of

ABS operations, please see ABS Institutional Environment.

Relevance The SDAC contains the most comprehensive and accurate measure of disability

produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and

severity of any restrictions.

A range of social and community participation data are collected in the SDAC from persons aged 5 years and over with disability. These include visits from family and friends and travelling to social events in the previous fortnight. Persons who reported one or more instances of social or community participation in the specified timeframes

are included in this indicator.

Timeliness The SDAC is conducted every three years over an approximate six month period.

Results from the 2009 survey were released in April 2011. Results from the 2012

survey were released in November 2013.

Accuracy Sample and Response Rate:

The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health

establishments and 500 other non-private dwellings.

The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for

non-response.

Scope and Coverage:

Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the NT has a significant proportion of the population in very remote areas and/or Aboriginal and Torres Strait Islander Communities. As such

it is important to interpret NT estimates in light of these areas being excluded from scope.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Aboriginal and Torres Strait Islander Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on NT estimates, as around 10 per cent of NT households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012.

For SDAC data, the confidence interval for each estimate and proportion have been supplied. Where an estimate or proportion has a confidence interval above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the confidence interval is not published.

The SDAC collect a range of demographic, financial and other information that can be analysed in conjunction with the social participation of people with disability.

Accessibility

See publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no.4430.0) for an overview of results from the SDAC. Other information from the survey is available on request - see further information in the SDAC Quality Declaration.

Interpretability

Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals.

The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012 on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.
