

10A Primary and community health — attachment

Definitions for the indicators and descriptors in this attachment are in section 10.5 of the *Report on Government Services 2007* (2007 Report). Data in this Report are examined by the Health Working Group, but have not been formally audited by the Secretariat. Unsourced information was obtained from the Australian, State and Territory governments.

Attachment contents

Table 10A.1	Indigenous primary healthcare services for which service activity reporting (SAR) data is reported (number)
Table 10A.2	Services and episodes of healthcare by services for which service activity reporting (SAR) data is reported, by remoteness category (number)

Table 10A.1

Table 10A.1 Indigenous primary healthcare services for which service activity reporting (SAR) data is reported (number) (a), (b), (c)

	<i>NSW and ACT (d)</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>NT</i>	<i>Aust</i>
2000-01	27	16	24	21	8	5	23	124
2001-02	24	19	25	21	8	5	26	128
2002-03	26	21	26	21	8	5	27	134
2003-04	29	21	26	20	10	5	27	138
2004-05	28	22	26	20	13	5	27	141

- (a) The SAR only includes Aboriginal and Torres Strait Islander health organisations that receive at least some of their funding from the Australian government to facilitate access to primary health care (including health promotion, dental and counselling services).
- (b) The number of services that provide SAR data has changed each year. This change is due to new Australian government funded primary health care services opening and existing services gaining Australian government funding. In addition, a decision is sometimes made to include existing Australian government funded services which may previously have been excluded because of the type of service that they provided, or there may have been a change to their reporting arrangements: for example services involved in Co-ordinated Care Trials. Since 1997 some services have ceased to operate and therefore no longer contribute data to SAR. DHA can provide time series data on the services common to the survey from 1997 to 2002 on request.
- (c) The number of Aboriginal and Torres Strait Islander primary health care services that responded to the SAR in 2001-02 was 130 out of 134. However, information from only 128 services out of the 130 respondents have been included in the data. Data for non-responding services was not estimated as these services may differ in important ways from the services that did respond.
- (d) Data for the ACT and NSW have been combined in order to avoid the identification of individual services.

Source: DHA (unpublished); 2007 Report, table 10A.4.

Table 10A.2

2001-02	460 000	313 000	70 000	256 000	317 000	1 416 000
2002-03	507 000	338 000	91 000	270 000	294 000	1 500 000
2003-04	572 000	345 000	110 000	207 000	378 000	1 612 000
2004-05	554 000	399 000	85 000	213 000	335 000	1 586 000

- (a) The SAR only includes Aboriginal and Torres Strait Islander health organisations that receive at least some of their funding from the Australian Government to facilitate access to primary health care (including health promotion, dental and counselling services).
- (b) The number of services that provide SAR data has changed each year. This change is due to new Australian Government funded primary health care services opening and existing services gaining Australian Government funding. In addition, a decision is sometimes made to include existing Australian Government funded services which may previously have been excluded because of the type of service that they provided, or there may have been a change to their reporting arrangements: for example services involved in Co-ordinated Care Trials. Since 1997 some services have ceased to operate and therefore no longer contribute data to SAR. OATSIH can provide time series data on the services common to the survey from 1997 to 2002 on request.
- (c) The number of Aboriginal and Torres Strait Islander primary health care services that responded to the SAR in 2001-02 was 130 out of 134. However, information from only 128 services out of the 130 respondents have been included in the data. Data for non-responding services was not estimated as these services may differ in important ways from the services that did respond.
- (d) An episode of health care involves contact between an individual client and a service by one or more staff, for the provision of health care. Group work is not included. Transport is only included if it involves provision of health care/information by staff. Outreach provision is provided, for example episodes at outstation visits, park clinics, satellite clinics. Episodes of health care delivered over the phone are included.
- (e) Episodes of health care in the SAR report were often estimates and while these are thought to be reasonable, there has been no 'audit' to check the accuracy of these figures.
- (f) Episodes data has been rounded to the nearest thousand.

- (a) The ratios are indirectly standardised using the estimated resident populations of Indigenous people at 30 June 2004, that is, the actual number of Indigenous separations divided by the calculated expected number of separations for Queensland, WA, SA, and the NT public hospitals.
- (b) Includes data only for Queensland, WA, SA, and the NT (public hospitals only), for which the quality of Indigenous identification is considered acceptable for the purposes of analysis. Caution should be used in the interpretation of these data because of jurisdictional differences in data quality. It should be noted that data for the four states and territories are not necessarily representative of the other jurisdictions. Australian total comprises Queensland, WA, SA and NT (public hospitals) only.

Table 10A.6

Table 10A.6 Ratio of age standardised hospital separations for Indigenous males to all males, 2004-05 (a), (b), (c), (d), (e)

<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	Total (b)
(c) The quality of the data provided for Indigenous status from 2001-02 has continued to improve due to the use of the National Health Data Dictionary definitions by all jurisdictions, however it is still in need of improvement. Identification of Aboriginal and Torres Strait Islander patients is not considered to be complete and completeness varies among jurisdictions. The variation in the number of Indigenous separations per 1000 Indigenous persons who were identified as such in the hospital morbidity data collections and/or in the total population. It is considered acceptable for only Queensland, WA, SA, and the NT public hospitals. Data on Indigenous status should therefore be interpreted cautiously.									
(d) Patients aged 75 years and over are excluded.									
(e) Some separation rates and rate ratios have been suppressed due to small number of separations.									
(f) All diabetes refers to separations with either a principal or additional diagnosis of diabetes.									
SHSR = Standardised Hospital Separation Ratio; CI = confidence interval.

- (a) The ratios are indirectly standardised using the estimated resident populations of Indigenous people at 30 June 2004, that is, the actual number of Indigenous separations divided by the calculated expected number of separations for Queensland, WA, SA, and the NT public hospitals.
- (b) Includes data only for Queensland, WA, SA, and the NT (public hospitals only), for which the quality of Indigenous identification is considered acceptable for the purposes of analysis. Caution should be used in the interpretation of these data because of jurisdictional differences in data quality. It should be noted that data for the four states and territories are not necessarily representative of the other jurisdictions. Australian total comprises Queensland, WA, SA and NT (public hospitals) only.

Table 10A.7

Table 10A.7 **Ratio of age standardised hospital separations for Indigenous females to all females, 2004-05 (a), (b), (c), (d), (e)**

	Unit	NSW	Vic	Qld	WA	SA	Tas	ACT	NT	Total (b)
(c) The quality of the data provided for Indigenous status from 2001-02 has continued to improve due to the use of the National Health Data Dictionary definitions by all jurisdictions, however it is still in need of improvement. Identification of Aboriginal and Torres Strait Islander patients is not considered to be complete and completeness varies among jurisdictions. The variation in the number of Indigenous separations per 1000 Indigenous population among the States and Territories suggests that there was variation in the proportion of Indigenous persons who were identified as such in the hospital morbidity data collections and/or in the total population. It is considered acceptable for only Queensland, WA, SA, and the NT public hospitals. Data on Indigenous status should therefore be interpreted cautiously.										
(d)	Patients aged 75 years and over are excluded.									
(e)	Some separation rates and rate ratios have been suppressed due to small number of separations.									
(f)	All diabetes refers to separations with either a principal or additional diagnosis of diabetes.									
	SHSR = Standardised Hospital Separation Ratio.
